In addition to this, the parts when welded present one homogeneous mass of metal. There is no joint or difference in density as was the case in all lap-welding operations, and the severest tests have failed to part a weld so accomplished. In many cases the metal has given away in other places, but never where it has been electrically welded.—*Journal of Commerce.*

Sources of Mechanical Energy.

People are fond of speculating about the new sources from which the world is going to derive power for its industries. The trolley car, the automobile and other inventions, in connection with which neither a horse nor a steam engine is visible to the eye of the casual observer, are hailed as indications that all mechanical practices and precedents are about to be turned upside down. As a matter of fact, while great progress is being made in certain directions, and forms of power other than animal are being extended over fields to which they did not formerly reach the same sources of energy are depended upon that were in use long before this generation was born, and, for all that can now be seen to the contrary, they will be depended upon long after we are all dead. "Sources of power," in practice, is necessarily a relative term. The primary source of terrestrial power is commonly said to be the sun. However, if one insists upon being theoretically accurate, he must seek it in realms of metaphysics, where he will surely get lost. For practical purposes, the chief sources of power may be stated as animals, the forces of nature and fuels of various sorts. Among the forces of nature are winds, waves and waterfalls. From time immemorial water-power has been used for industrial purposes, and previous to the introduction of the steam engine it was the chief source of mill power. The utilization of the force of expanding steam, generated by the combustion of a fuel, to run machinery, was in its consequences more important than any step taken before or since, so far as events have yet proved. The steam engine is now as much the mainstay of industry as ever before; in fact, more so, for its applications are being greatly extended. It has been perfected to such a degree that, although still only a comparatively small proportion of the energy contained in the fuel is made use of, that proportion is about as large as it seems possible for engineering skill to obtain.

There are, however, many sources or channels of power which may be suggested as rivals to steam. Electricity, in the latter part of this century, has brought about an industrial revolution second in importance only to that caused by steam in the early part, when the use thereof became general. It is not, however, a source of power, but a means of conveying and distributing power. It supplements the steam engine, not supplants it. Indeed, it renders possible the use of the steam engine in a great variety of new ways. Furthermore, it has given a fresh lease of life to that still older source of power, the waterfall. Of course, it is possible to develop an electric current directly by chemical action but no method of doing so has yet been discovered which has enough commercial importance to be worth mentioning.

The adoption of mechanical means of propelling vehicles which formerly were drawn by horses has set inventors to devising forms of motors which, with whatever fuel may be necessary for their maintenance, can easily be carried about. The tramway car is driven by an electric motor actuated through a trolley wire or a storage battery, and, more recently, the compressed-air motor is being tried. The horseless carriage is commonly run by a motor fed from a storage battery or, especially in Europe, the motive power is derived from a gas engine. This does not mean that storage-battery-driven electric motors, or compressed-air motors (both of which get their power from a steam engine), or gas engines are necessarily better than steam engines, as a class, but that in cases of this nature it is found more expedient to employ them. Thus, because it furnishes an easy means for carrying power from place to place, liquefied air may find an advantageous application.

The gas engine, a prime mover which operates directly by the explosion of fuel gas as a working fluid, is a machine for whic an important future is predicted. Unlike the steam engine, the room for mechanical improvement in it is still great. It is now finding extensive use as against the steam engine, but chiefly in small sizes.

A great deal of experimenting is taking place with novel forms of fuel as applied to the steam engine itself. This is occasioned largely by local expediency. In the natural gas belt of the United States that combustible has been extensively used to avoid the smoke incident to burning soft coal, or, because of its convenience and temporary cheapness. The supply is already giving out. Artificial gas is sometimes resorted to as a fuel, and is likely to be still more extensively used in the future, though perhaps chiefly for the internally fired gas engine. In Eastern Europe petroleum is burned to a greater or less extent on railways, owing to the copious quantity of oil from the Russian fields. The world's coal supply is not at an end yet, and when it does give out, the people—if there are any people—will no doubt have invented something beyond the reach of our present conjectures. There is abundant power in the tides, waves, sunrays and internal heat of the earth, the problem is merely to turn it to useful purposes on a commercial scale.

Value of Dead Walls.

Some years ago it was discovered that dead walls and roofs in this city had a value that the tax assesssors didn't take into consideration, and the discovery developed a set of men who made it their business to secure options on all desirable spots and hold them for a rise in the market. The dead walls and roofs were in demand for lithographic advertisements ranging from Dr. Cureall's pills to the latest melodrama. There are scores of brokers now who deal exclusively in dead walls and advertising spaces, and some of them have grown wealthy in the business. They keep a sharp lookout for all improvements in old buildings or plans of a new building that give promise of a dead wall, or of a temporary wooden fence on which lithographs may be displayed. The billposter buys the advertising rights on these places, and then he rents them out again at from 200 to 500 per cent. profit to the theatrical agents or patent medicine men, as the case may be. For instance, a manager of a theatre not long ago paid a billposter $125 a month for the right to advertise on a board fence around a big building that was being constructed in the Tenderloin district. A billposter who has grown old in the business said not long ago that there wasn't an available dead wall in New York that wasn't controlled by billposters. Some of these energetic advertisers send agents all over the city at intervals to decorate every ash barrel with little dodgers that are known as "snipes." When dead wall advertising was less common than it is now, the theatrical managers valued it more highly. Their lithographs could be read at a glance, and they were not surrounded by lithographs of rival managers. The displays on the billboards and dead walls are now so numerous that they are confusing, and the managers and the billposters very nearly come to an open rupture.—*New York Times.*

Tool Trust in Germany.

Consul-General Guenther writes to the State Department as follows from Frankfort, June 12, 1900: "The manufacturers of first-class tools and of iron and steel goods in Westphalia and the Rhenish Province have formed a trust. Its avowed purpose is to fight foreign competition in tools, etc., and the menacing commercial invasion from the United States. At the same time it is intended to combat the domestic production and sale of shoddy goods at ruinous prices. Every competent manufacturer who obligates himself to sell only first-class goods and mark them with the firm's name and price can become a member of the union. The sale of poor and defective articles will result in expulsion. A committee will supervise the quality of the goods. The sale will be regulated by the union as much as possible, especially as to prices, terms, etc. For effective opposition against foreign competition united action will be inaugurated."

A Growing and Profitable Business.

A practical tinsmith or plumber has a decided advantage in conducting a stove, tin and plumbing business, says a contributor to the *Metal Worker*, as compared with the dealer who is merely a buyer and seller of goods, depending upon his help for the mechanical ideas in connection with each day's business. It is an advantage that is not fully appreciated by the average merchant who is practical in his particular business, but the quicker he brings himself to the point of seeing and fully appreciating this very important fact the better it will be for himself in every respect and for his pocketbook in particular.

Perhaps it is intended so in life that one man should not be blessed with all the good points which go to make up the perfect man in business. The fact is that the perfect man in business is not to be found, for each and all have their shortcomings, and it is not that the successful man is by any means the perfect one. It is only that he embodies in his manner of doing his business more of the elements or traits of a perfect man than his neighbors whom he outstrips.

The practical man, by reason of his mechanical knowledge, has one of the greatest and most important elements to insure success in such a business as is built up in connection with stoves, plumbing, gas goods, etc. It is really the foundation of the business, and, if coupled with reasonable perseverance and patience, will reap great benefits.

What the usual mechanic lacks in conducting his business is system in connection with his manner of buying and selling goods and in keeping his accounts. In fact, the average mechanic has an aversion to tackling figures and the little things that go to make up the detail of conducting a growing trade, hence his business is kept small by this very neglect.

How often it happens that a purchaser goes into a tin shop or plumbing shop and finds fittings, tin, sheet iron, etc., in a state of disorder, with tools scattered and plenty of dirt and a general appearance of carelessness everywhere; and yet the man conducting the business is a good mechanic and carries on a business which pays him a good living, if not more.

No matter how small the shop or store, it pays to have it clean and in order always. Take time to do it, and if your business is too large to do so yourself, hire help to do it. Such help costs but little and business will be increased. Keep yourself in an atmosphere of neatness and order and you will be surprised how the class of trade coming your way will improve. Have neat signs in front, clean windows, and your brass fittings bright and shining behind glass doors. If you are selling stoves, bathtubs, or bicycles, see that the samples are always as clean as when first placed upon the floor. You can't sell shop worn goods at the same profit as if clean and new appearing, and any article in your store or shop that looks badly detracts from the other goods.

Don't try to keep your own accounts if you are expecting to increase your business. A clerk for this purpose and to look after your office, etc., costs but little in the present day. You cannot afford to do it yourself, as you are more valuable in the general conducting of your business. Of course one must have an oversight of one's accounts as well as of other parts of the business, but the point is for the man who owns the business to use his brain in a general way to enlarge trade and systematize it so that it may grow. Some think their business too small for the care that is required as suggested above, but it is not so, and what will surprise many is how little real labor is connected with system and cleanliness. It really saves worry and labor. Try for yourself one year and you will be satisfied that it is profitable and will bring you into prominence among your trade as well as bringing you a better class of customers.

The tallest stone tower is the Washington Monument.

Diamond Dies Used Now.

One of the latest and most wonderful developments in brass making is the use of the diamond die, by means of which ingot brass is to-day drawn down to wire of the fineness of nine-tenths of a thousandth part of an inch. Steel may also be drawn nearly as fine, and the two products when completed are as fine and soft as the threads of a cobweb, and are as wavy and glossy as human hair.

The brass hair is of a beautiful auburn color, while the steel is of an iron gray. This wire is about as strong as a human hair and is of value for mechanical purposes, being in great demand by makers of electrical apparatus. Never before was so fine wire drawn. Until recent years wire was drawn through steel dies. The development of the diamond die to its present stage of perfection has rendered possible the production of much finer wire. In fact, the size of the wire now possible is limited only by the ability to hold together as it comes through the die.

The diamond die is made of a flake diamond looking not unlike a bit of isinglass. The hole through which the wire is drawn is drilled through the diamond, and the stone is then stuck on a steel slab with glue, directly over a hole in the slab which is a trifle larger than that in the diamond. The wire to be drawn is then led through the diamond so that the stone bears steadily against the slab. This keeps the diamond in position.

The brass ingots from which the cobwebby wire is made are four inches square and long enough to weigh about 180 pounds. One of these will make miles of the cobweb wire. It is first put through steel rolls until it is reduced to the size of one's finger, and then it is drawn by machinery through a set of steel dies, gradually decreasing in diameter, until it comes out in the shape of the wire of the fineness seen in the ordinary trades. Then it is put through a set of eight diamond dies, the diameter of the last being the infinitesimal part of an inch indicated above.

Another curious thing in this brass-making country is the development of hydraulic rolls which are so scientifically adjusted that a copper cent may be rolled out under them to the size of an enormous platter, and to thinness that amounts to transparency, so that a newspaper may be read through the metal. The operation has to be conducted with great care. One of the cents thus rolled out was sent to Queen Victoria as a curiosity some time ago, and the Queen returned a letter thanking the workmen.—*New York Sun.*

Manual Training in Germany.

There exist at present in Germany, distributed in 605 places, 861 schools and institutes wherein manual training is carried on in 1,514 workshops. Of this number, 836 schools and institutes conduct the training on a pedagogical basis. Prussia has 570 manual training schools. The 1,514 pupils' workshops comprise 286 independent manual training schools and 238 public schools, of which 16 are auxiliary schools where the work is obligatory, 17 are middle class schools, 41 are high schools (made up of 8 gymnasiums, 6 technical gymnasiums, 12 technical and technical high schools, and 15 boarding schools), 7 are preparatory institutes, 26 are teachers' seminaries, and 93 are boys' asylums; while the remainder consists of various kinds of private educational establishments.

Five hundred and thirty-five workshops are devoted to wood carving, 527 to working in cardboard, and 356 to the carpenter's bench. Of these, 68 are closely connected with wood carving, 77 with preparatory roughing-out work, 35 with metal work, 28 with country timbering, 11 with wood and metal turning, and 11 with modeling in clay.

Over 2,200 German teachers have been taught to become instructors in manual training. Of these, 954 were taught in Leipzig and 1,250 acquired training in 33 places in other parts of Germany.

RICHARD GUENTHER,
Consul-General.

FRANKFORT, June 19, 1900

E. C. ATKINS & CO.'S EXTENSIVE PLANT.

It is always a pleasure to report in the columns of this paper the progress and development of any of our advertisers. We are therefore glad to call particular attention to the illustration on this page showing the great saw manufacturing plant of E. C. Atkins & Co., of Indianapolis, Ind.

The history of this enterprising firm is one of intense interest to every one who has anything to do with the use, sale or manufacture of saws and the tools for keeping them in order.

E. C. Atkins, the founder of the plant, commenced business in a very small way in 1856. Being a man who had received a thoroughly practical training in the manufacture of every kind of saw as well as having a scientific education in all theories and methods, from the production of steel up to the finished product, he was able with his indomitable energy and perseverance to produce the finest goods on the market and gradually build up the business until it has now become the largest exclusive saw factory in the world, covering about ten acres of actual floor space.

PLANT OF E. C. ATKINS & CO.

In the illustration will be seen the new buildings that have recently been finished, and which are now in the course of erection.

The building shown in the right of the picture was just completed. In this department is manufactured such goods as cross-cut saw handles, hand saw handles, wood saw frames and other material in that line. The large building in the rear at the left is the most extensive and best equipped shop in the world for the manufacture of Band saws. This structure is five stories high, sixty feet wide by one hundred and ninety feet long, containing the very latest appliances for the manufacture of the famous Atkins Band saws, including tempering, grinding, etc., all of which processes are Mr. Atkins' own invention. At the back of this building is now being erected another fireproof structure four stories high by one hundred and fifty feet square, which will be the most wonderful and largest tempering shop ever known to the saw manufacturing world. This is being built under the direct supervision of E. C. Atkins, whose knowledge of the needs for work of this kind is doubtless superior to that of any other living man.

Within the past few weeks the property just west of the band saw building, covering the space of one-half a block, has been purchased by this firm, on which they will erect several other additions in the due course of time.

The produce of E. C. Atkins & Co.'s plant is doubtless well known to our readers as consisting of every kind of a saw known to the trade, such as solid and inserted tooth circular saws, top saws, re-saws, rift saws, edger saws, concave saws, shingle saws, heading saws, mitre saws, cross-cut saws, milling saws, hot and cold metal saws, veneer saws, slate saws, stone saws, wide and narrow band saws, gang, drag and mulay saws, pit and whip saws, butcher and kitchen saws, hand, panel and rip saws, back, compass and pruning saws, cylinder saws, ice saws, pork packers' saws, dehorning saws, stair builders' saws, crapenters' handy saws, web saws, scroll and keyhole saws, plastering trowels, and slaw cutters, cabinet scrapers, flour testers, bench scrapers, corn knives, cane knives and many other items in the Hardware line.

They also manufacture a great many mill specialties, such as saw guides and rounders' anvils, hammers, straight edges, swages, side files, mill dogs, brazing tables, mandrels and many other tools that are used in saw and planing mills and wood-working factories, also cylinder saws for stave factories.

One is well repaid for a visit to this mammoth establishment, as it is quite an education to see the many advancements in labor saving machinery and the vast quantities of saws produced. The demand for Atkins saws has been so extensive of late years that at times it was greater than the ability to supply, thus necessitating the increased facilities which have been and are now being added to the plant. Branches have been established at Memphis, Tenn., Atlanta,

Digitized by Google

Ga., Minneapolis, Minn., and Portland, Ore., besides which they have many agencies in various parts of the country.

Their foreign trade is quite extensive and growing rapidly, their cross-cut saws having recently won the first prize at the international sawing contest at Tasmania. At Paris they have a magnificent exhibit, which has attracted great attention. A very beautiful souvenir in connection with their exhibit at Paris has just been issued, a copy of which can be obtained on application.

The officers of the company are E. C. Atkins, President; H. C. Atkins, Vce-President and Superintendent; M. A. Potter, Treasurer; N. A. Gladding, Secretary; J. W. Perkins, Assistant Secretary; A. D. Gates, Assistant Treasurer, andF. C. Gardner, Cashier.

Albany Hardware & Iron Co.'s Outing.

The annual outing given by the directors of the Albany Hardware and Iron Co.. Albany, N. Y., to their employees, which came off at the Wayside Inn, near Mechanicsville, on August 11, was a delightful and enjoyable affair. Among the surprises were several presentations of purses, one from the company to Philip Powers, and the other from the employees to James O. Hovey, one of the oldest Hardware men in Albany. Both presentations were made by President Charles H. Turner, and the recipients responded in a fitting manner.

As soon as the stores closed at noon the employees met at the main store and stood outside until a local photographer took two pictures of the group. Chartered cars of the United Traction Co. were in waiting at the postoffice, and at 12:30 the start was made for the Wayside Inn. The chartered cars went to Troy, through that city to Green Island, to Cohoes, North Side and then over to Waterford. Here the Albany cars were left and the party of sixty boarded one of the big motors of the Schuylerville line and were soon on the way through a most delightful country to one of the prettiest places along the line—the Wayside Inn, which was reached shortly after 2 o'clock.

Of course, everyone was hungry, for the employees had worked unusually hard during the morning, and no time was given for dinner before the start was made. Proprietor Kedian had a steaming dinner ready on tables on the broad piazza, and it consisted of little necks on the half shell, consomme, baked bluefish, anchovy sauce, little onions, cucumbers, sliced tomatoes, new potatoes with parsley, creamed spring chicken, sweet corn, new potatoes, ice cream and lady fingers, watermelon, nuts and raisins, French coffee, cigars.

It was after 4 o'clock when the dinner had been disposed of. President Turner rapped for order. In his usual happy manner he complimented the employees for their faithfulness to the company, assuring them that their efforts were always appreciated. He then referred to the long service of Mr. Hovey, and, after paying a tribute to his sterling character, presented him with a purse from the employees of the company. Mr. Hovey made a feeling response. Mr. W. B. Wackerhagen, secretary of the company, also made a few pleasant remarks. Dinner over, the party adjourned to the ball field, where teams of the main and branch stores contested for more than an hour. It was during this game that T. H. Sargent made the hit of the day. He had sent a ball way over in right field and had reached third base, having stolen from first. Between the third and home he slipped and fell, but two other players who were coaching him picked Sargent up bodily and laid him down on the home plate. The game resulted in a victory for the branch store by a score of 14 to 8.

Then came a tug of war between teams captained by George Van Tuyl and Teunis Sargent. It required 42 seconds for Van Tuyl's team to drag its opponent over the line. The crowd on the broad piazzas cheered lustily for the victors. At 7 o'clock supper was served and an hour later the party again boarded the chartered cars and were soon on their way to Albany. Coming through Cohoes, Northside, Green Island and Troy, fireworks were shot off and colored lights burned. Mr. Fred Wing, with his cornet, gave bugle calls. It was 10 o'clock when the party again reached Albany, having experienced one of the most enjoyable outings on the records of the company.

The Question of Circulation.

The advertiser in a newspaper is interested in the circulation of that paper when he wishes to patronize it and use its columns for advertising purposes. The average advertiser usually goes astray on that point. It is an easy matter to mail papers to every Tom, Dick and Harry over the land and plant a sworn statement before the advertiser to the effect that so many thousand people get the paper, but is the paper appreciated by those getting it for nothing? Does a paper sent to so many thousand other newspapers, not in the same line of business, benefit the advertiser? Does a paper sent free to the washerwoman, ministers, lawyers or laborers containing matter of a technical nature in which the "deadheads" are not interested benefit the advertiser? It is an easy matter to give away papers provided you can get the advertiser to stand the cost. A circulation fairly planted in the trade represented, where every one pays for the paper because it is of value to the subscriber, is a far better advertising medium than a paper sent to missionary societies and dry goods dealers, whereas the edition may be exclusively intended for iron and steel interests. It's the paying subscriber the advertiser wants to reach if he wants to sell goods. The paper to watch and patronize is the one that cuts you off the list the month your subscription is overdue.—*American Manufacturer.*

Foreign Postage.

A timely warning has been given out by the postal authorities and is repeated in the trade press, in regard to short paid letters to foreign countries, in view of the largely increased correspondence between this country and France during the present exposition. Attention has frequently been called to the fact that quite a large proportion of the mail matter addressed to foreign countries is deficient as to postage, and the bulk of this matter is of a business or advertising character. The receivers of such letters are compelled to pay double the amount of the deficiency, and such a tax has this proved in some quarters that numbers of European firms have declined to receive any short paid American letters or packages. When a foreign business house has to pay for the privilege of receiving an advertising circular, catalogue or other matter which has not been asked for, it is not to be wondered at if the communicaton meets with scant favor or consideration. Business men having occasion to correspond with individuals or concerns abroad should be careful to sufficiently prepay their communications, so as to insure their delivery. Otherwise delay and inconvenience may be occasioned.

A lot of hardware, consisting of nails, tacks, screws, parts of door hinges and what not, the total number being 136 pieces, were taken from the second stomach of a cow. The cow, which weighed about 1,300 pounds, was in perfect condition and as fat as a butter ball, and one of the finest cattle killed in those parts in quite a while. It is a question whether she was fattened on the hardware, but it certainly did her no harm.—*Frankfort (Ky.) Call.*

"Those folks next door are too swagger for this neighborhood."

"Do they use finger-bowls three times a day?"

"I don't know; but they call their front hall a 'porte cochere.'"—*Indianapolis Journal.*

The longest canal in the world extends from the frontier of China to St. Petersburg. It is 4472 miles in length.

RECENT TRADE PUBLICATIONS.

JOS. DIXON CRUCIBLE CO., Jersey City, N. J. Twelve-page booklet entitled, "Some Words of Wisdom About Paint," forming No. 6 of the series of similar booklets having reference to graphite paints. In this partcular pamphlet, "Dixon's silica graphite paint" is made the text to preach from, and as is customary with all the publications of this house, the reading matter is of that convincing kind that few will peruse the pamphlet without becoming convinced of its desirability as an addition to a Hardware stock or its utility for the purposes designed. It is certainly well written for that purpose.

IVER JOHNSON'S ARMS & CYCLE WORKS, Fitchburg, Mass., New York office 99 Chambers Street. Twenty-eight page catalogue of firearms made by this company. Printed on coated paper, with excellent illustrations, among which is given an illustration of their extensive plant at Fitchburg. Among the contents of this catalogue are all the various parts of which their firearms are composed and are all given with the appropriate numbers, so that repairs at any time may be ordered from the factory, every part, no matter how small, and there are many of them, being appropriately numbered for each revolver.

The HANCOCK INSPIRATOR CO., 85-89 Liberty Street, New York. Catalogue of this desirable appliance, which has been on the market for the past twenty-two years. This is a pamphlet catalogue of forty pages, printed on good paper, and handsomely illustrated throughout, showing the Inspirator, "Lotus" Automatic Injector, Hancock Ejector, Hancock Swing Check Valves, Globe and Angle Valves, etc., together with all the essential parts, separate and distinct, of the Inspirator, numbered so that repairs can be readily obtained. The company state that "owing to the new goods introduced and illustrated in this catalogue, it has been necessary to establish a new price list. It has also been advisable to revise some of the old prices on standard goods, which are subject to revised discounts. New discount sheets will be sent upon application." These goods are too well known to require more than a general notice. The company having moved their general office and salesroom to the above address, in order to facilitate handling their business and to keep in closer touch with trade, they desire that all correspondence be addressed to that office.

LANE BROS. CO., Poughkeepsie, N. Y., have recently issued a new catalogue of important Hardware specialties with which the name of Lane Bros. has been prominently identified for many years. This is called Catalogue 16, and includes in its contents Lane's patent steel barn door hangers, both in the "standard" and "special" designs, a steel track to go with the same, their sliding door latch, and also a stay roller for sliding doors. These goods are well known to the Hardware trade, having been the pioneers for excellence in their respective lines for a great many years. Lane's elevator door hangers are also illustrated, showing the hanger frame with ball bearing appliances. Several pages are devoted to Lane's parlor door hangers, including the "standard" and the "ball bearing" patterns, both of whch have excellent features of their own. Lane's "New Model" parlor door hanger is illustrated in its improved style. The hanger frame is made entirely of steel, the wheel has noiseless fibre tread, and with their well known roller bearing. It is anti-friction and adapted to any length run. Included in the line of goods of this description are the "Fire-door Fixtures" of which the company now manufacture a great variety for automatically closing fire doors, shutters, etc., these goods being represented in a special catalogue, are only incidentally referred to in this. These goods, it may be mentioned, were designed under the supervision of the Associated Factory Mutual Fire Insurance Companies, and have since been universally approved by all other insurance companies. The catalogue will be furnished on application for the above line of goods. In the pamphlet under consideration, Lane's ball bearing store ladders are illustrated, with special illustrations showing the strength of the several parts. Included in the assortment are Lane's automatic lock tackle blocks; the Junior tackle block; Lane's steel carriage jacks and Lane's patent measuring faucet. The remainder of the catalogue is taken up with their well known special "Swift" mills, with the manufacture of which they have been long identified, and the assortment of whch has been greatly augmented, and now covers a very large variety, running from the smallest size to those standing nearly six feet high. The Swift drug mills conclude the line of goods mentioned in this important catalogue.

STANLEY RULE & LEVEL CO., 107 Chambers Street, New York. Under date of August, 1900, they publish their catalogue No. 26, a pamphlet of over 80 pages, which, instead of being a regular catalogue covering their line of goods with list prices, etc., is more particularly a "mechanics' hand book," showing the various tools of merit now manufactured by this concern, with all the new patterns and improvements recently produced, a large line of rules and plumbs and levels of every description, metal and wooden block planes, and special planes for various purposes; in fact, a complete mechanical outfit for the carpenter, cabinet maker and other skilled mechanics can be selected from this valuable little pamphlet. This is one of the most useful publications that they have issued within our recollection, forming a pocket guide for their line of tools, not only for the Hardware trade, but for the mechanic as well, and is evidently intended for a wide distribution. Fully illustrated throughout and printed on excellent paper. They state in their introductory remarks that in publishing this catalogue it has been their purpose to present to the users of their tools a hand book giving specifications of and information regarding certain of their tools most generally used. Their desire has been in the compilation of it to interest the consumer in order that he may go to a regular Hardware dealer for the goods and prices of the same. They state that if the goods cannot be obtained from the local Hardware dealer, any one interested, if they will write to the manufacturers, will be placed in touch with dealers in that locality in such a way that the goods will forever afterward be obtainable. The Stanley goods are known from one end of the United States to the other, and are largely represented even in various foreign countries, the company having been engaged in designing and manufacturing carpenters' tools since 1857 under its present name, and even for several years prior to that time the same business was carried on under a different name. When it is taken into consideration that with a half century's experience they have been justified in widely advertising their product, there is scarcely a portion of the world to-day where their goods are not well known under the name of the "Stanley" specialties. They have been prompt users in their manufacturing of every suggestion made by their customers. The moment any hint is given them of a possible improvement, experiments are at once made as to its utility, and if found worthy of adoption, it is used forthwith. The Hardware trade will do their best to assist in the distribution of this very valuable publication, which is evidently the desire of the company.

NEW GOODS AND SPECIALTIES.

Yankee Automatic Drills.

North Bros. Mfg. Co., Philadelphia, Pa., whose line of important Hardware specialties are well known, have recently added to their desirable line of automatic drills the two styles which we illustrate herewith. They are marketed under the name and number of the Yankee Automatic Drill Nos. 41 and 42. These drills are designed for use by carpenters, cabinet makers and other wood-workers doing high-grade and first-class work. They are used for boring through various kinds of hard wood, for the several purposes for which it is intended to use them, and enables the operation of setting screws, brads, nails, etc., in a perfect manner.

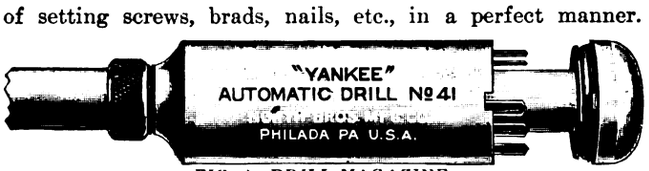

FIG 2.—DRILL MAGAZINE.

There is no kind of wood used by these artificers that would be split by the operation of these perfect drills. In operation the simple pushing of the handle downward revolves the drill, when a spring returns the handle to its place. During the return movement the drill point revolves upward, and thus is enabled to clear the chip or dust from the opening created by the operation of the drill. The operation of its magazine is the only difference from the company's Yankee Drill No. 40. The magazine in this drill (Fig. 1) is opened by loosening the nut at its lower end, causing the interior of the handle to move up, and expose the drill points to plain eviw, which is shown in the smaller illustration, Fig. 2. This enables the operator to quickly select any drill required for his purpose. The chuck is referred to as being of new and improved design, holding the drill points in an extremely tight and rigd manner. Fig. 3, which illustrates the drill No. 42, is of the same construction as No. 41, but without the magazine for the drill points, and in place of the metal handle a wood handle is supplied. This is done to make the article a little lower in price. The drill points necessary for this tool are placed in a small wooden box, the chuck used being the same as that used in drill No. 41. Eight drill points, as illustrated in Fig. 4, are furnished with each tool, being essentially the same as those used in the company's drills No. 40 and 41. The entire length of the drills, inclusive of the drill point, is 11 3-8 inches. Both of the drills referred to here, in their completeness, are nickel-plated and finished in a workmanlike manner, and really represent a high grade of tools worthy of encouragement by every Hardware dealer to whose attention they are brought.

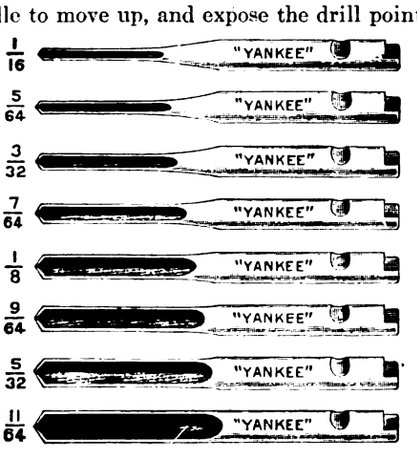

FIG. 4.—"YANKEE" DRILL POINTS

Mrs. Vrooman's Sanitary Sink Strainer.

F. H. & E. B. Vrooman, 225 Dearborn Street, Chicago, Ill., are placing before the Hardware and housefurnishing goods trade the Sanitary Sink Strainer of which we give two illustrations. It is constructed in a careful manner, of first-class material for the purpose intended, and presents in position a very neat and attractive appearance. It is designed to be durable and is made in a manner that enables it to be readily cleaned. More attention than usual is given to these kitchen appliances, the house-keepers desiring at the present time to keep the sink free from all microbe-breeding refuse, thereby avoiding the danger of contracting many diseases, these articles being indorsed by all authorities on sanitation. It is made in two styles, plain tin and japanned, the design being to simply attach it to the corner of the sink with a tack wherever the sink has wooden casing on top, see Fig. 1, but in the more modern style of sheet iron or metal sink, a stand is used, see Fig. 2, which clasps firmly on the bottom of strainer. While in its use it permits free passage of all liquids, it is easily removed to emit refuse, and retains all solid matter for further disposition. It is a house-keeping speciality that has already had a large sale, and is of a character that readily recommends it to the careful housekeeper.

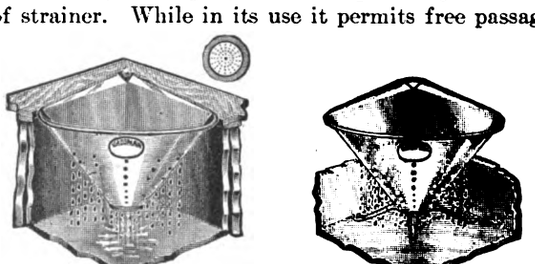

FIG. 1. VROOMAN SINK CLEANER.—FIG. 2.

Ogden Automatic Liquid Door Check.

The Ogden Mfg. Co., Newark, N. J., who are represented as general agents by W. H. Quinn & Co., 103 Chambers Street, New York, are placing upon the market the Ogden

Digitized by Google

Automatic Liquid Door Check and Spring, which we illustrate in this article, showing its general appearance and also a sectional view of its checking mechanism. One of the principal features of this check is a newly improved automatic regulating valve on the inside of the check, by the aid of which its action is regulated and fully controlled and all the movements of the door at all times and under varying conditions are provided for. The use of the small regulating screw usually a part of all door checks and springs, is obvi-

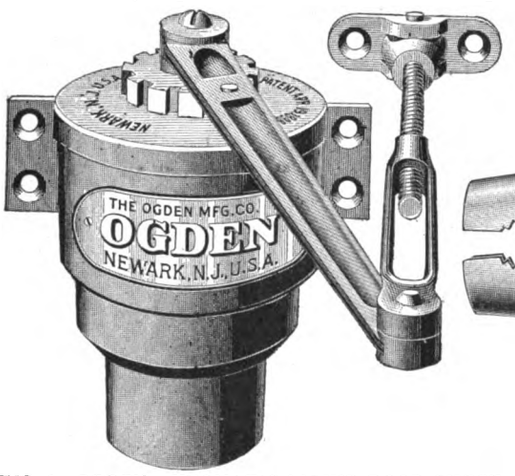

FIG. 1.—OGDEN AUTOMATIC LIQUID DOOR CHECK AND SPRING.

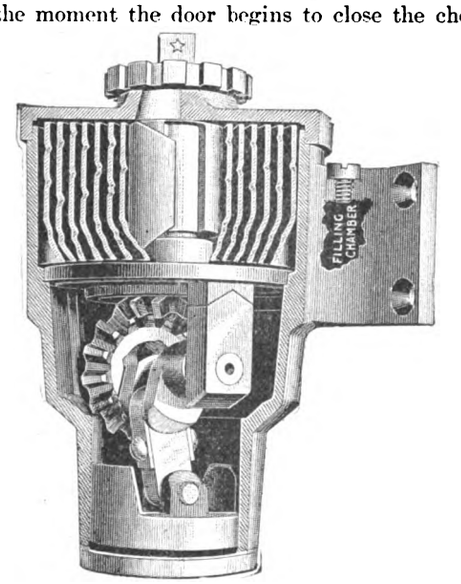
ated by this regulating valve, so that the action of the check is governed completely and the door enabled to close quickly, quietly and gently, even though a wind should blow at the rate of 40 miles an hour. All the main working parts of this door check are of the toughest drop-forged steel, every part being machined to a fit and made interchangeable throughout. A specially prepared non-freezing oil is used for the liquid in which all the working parts are immersed and revolve in when the check is in use. This assures proper lubrication under all circumstances and reduces any possible wear to a minimum. Another feature to which attention is called is that the action of the door during its entire swing is controlled by the check. The door may be opened without any checking resistance at any angle from 5 to 180 degrees, and the moment the door begins to close the check actually



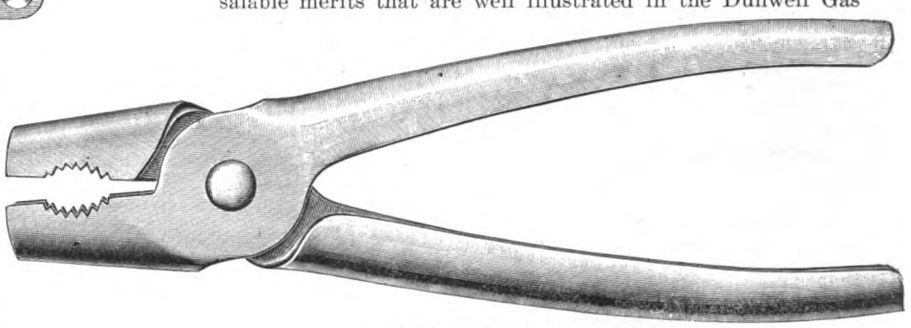


FIG. 2.—SECTIONAL VIEW, SHOWING CHECKING MECHANISM.

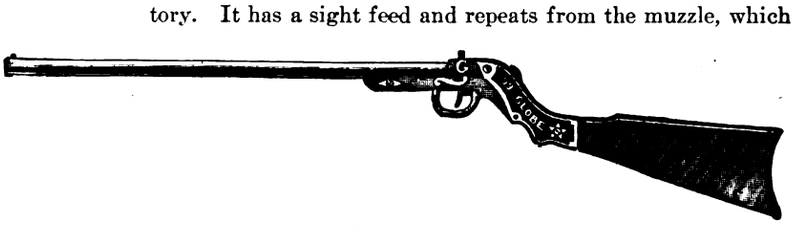
begins to perform its proper function, the checking power gradually increasing as the closing point is reached, this course of action giving a smoothness in closing peculiar to this check. A self-contained coiled spring which is easily removed from the case is used in its construction. To change the check from right to left or *vice versa* it is only necessary to remove the spring from the case, invert it and return it. Few simpler methods of accomplishing the desired result are obtainable. The check contains double the supply of liquid necessary to operate it, and as there is no hole through the cap where the liquid can escape this insures it against all possibility of leakage. Fig. 1 shows the door check and spring ready for application upon the door. Fig. 2 gives a sectional view by which the interior mechanism of the check and its method of operation is made apparent to the reader.

Bridgeport Mfg. Co.'s Plyers.

The Bridgeport Mfg. Co., Bridgeport, Conn., are manufacturing a line of plyers of improved construction and salable merits that are well illustrated in the Dunwell Gas



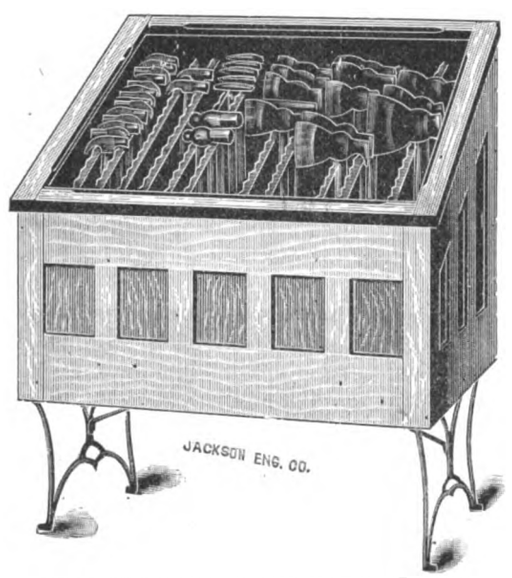
THE DUNWELL GAS PLYER.

Plyer, of which we give an illustration. This special plyer is an entirely new production, being forged from sheet cast steel, the jaws being constructed in an U shape with a slight opening of the U where the teeth are milled on the jaw. This method of construction permits the irregularities in dimensions of pipe to enter the open space slightly, and give the teeth that uniform grip on the pipe which avoids all possibility of slipping. As the part from the teeth outward to the end of the jaw is made flat, its construction provides a very good flat-nose plyer in addition to the principal object for which the tool is made. The whole article is made of a fine quality of steel, all the plyers being carefully tempered, and the method of construction makes them practically unbreakable, the manufacturers claiming it to be equal in every respect to any forged steel gas plyer, and from their original methods of manufacture they are enabled to market this desirable article so that it may be retailed at a moderate price.

Globe Single and Repeating Air Rifle.

J. A. Dunbar Mfg. Co., Northfield, Mich., have recently placed upon the market the New Globe Air Rifle. The twentieth century gun which is marketed under the above title is of a model of 1900, being finely finished, nickel-plated and extremely handsome and gunlike in appearance. The magazine of the repeater holds 300 B. B. shot. Each rifle is accurately tested and sighted before leaving the factory. It has a sight feed and repeats from the muzzle, which

THE GLOBE AIR RIFLE.



makes it shoot strong as a single shot. The stock is made of selected hardwood and finished in natural color or in walnut. This 1900 model has a new locking device by the aid of which the gun is prevented from any rattle or break-down when it is shaken. When desired the repeater can be used as a single shot, as the single shot is the same as the repeater, but without the repeating attachment.

Herrick's Hammer and Hatchet Case.

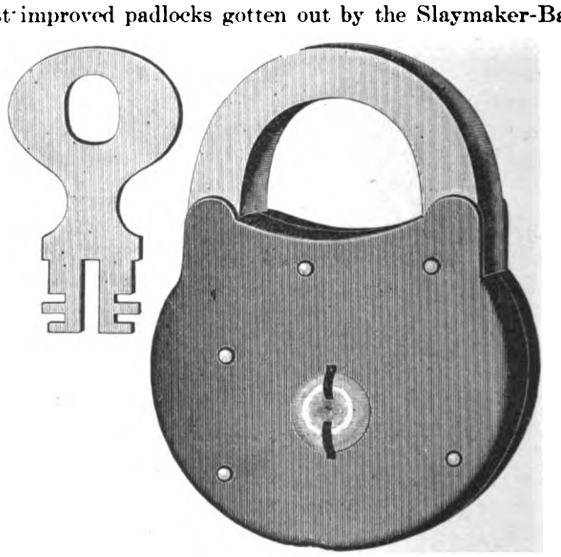
F. A. Herrick Co., Jackson, Mich., are the manufacturers of a number of specialties in the way of improved store furniture, consisting of tool racks, tool brackets, sampling hooks, auger and bit cases, hammer and hatchet cases, axe racks, etc., one of the most novel of which is the hammer and

Digitized by Google

hatchet case we illustrate herewith. As every one knows who runs a Hardware store, it is a very difficult matter to display these irregularly proportioned goods in anything like a satisfactory manner, or to get at them when sold in any proper way, but by the aid of this case, which is prepared expressly for their display and sale, a simple removing of the glass cover enables the salesman to pick out in a very few moments the hammer or hatchet, on the merits of which he may have been descanting. The case is made of oak, and very nicely finished, the brackets are of malleable iron and japanned as well. The back of the case has a drop-door hung with spring hinges so the lower part of the case can be used for surplus stock, the glass cover having a supporter to hold it by when it is necessary to show the goods. Every article in the case can be seen at a glance, and it must be remembered inclosed in the case they are kept free from rust, which is a very important feature. The manner of displaying these goods is of a character that prevents the customer from having a desire to handle every article that is shown him. The case when filled with tools and placed in a store would attract attention at once, and in this manner would greatly increase sales. As it is finished in the back the same as in the front, it can be placed in any part of the store desired. They are made in three sizes, holding ten dozen of the various goods displayed. The size of the cases are all the same, viz.: 36 inches long, 26 inches wide, 47 inches high on the back, and 32 inches high in front, so neatly japanned, the legs and standard being of cast iron it may be readily understood how much of utility is crowded into a very small floor space. The weight of case ready for shipment is 185 pounds.

HERRICK'S HAMMER AND HATCHET CASE.

New Century Rotary Washer.



The New Century Washing Machine Co., 6 and 8 Wabash Avenue, Chicago, Ill., are placing upon the market the New Century Rotary Washer, which is manufactured under a recent patent granted May 8, 1900. In its construction a number of improved devices have been utilized, enabling the manufacturers to warrant every machine sold. It is made of superior material in every respect, white pine sides, and bottom corrugated, having heavy steel hoops on top and bottom, and provided with a heavy electrically-welded wire hoop in the centre, every care being taken in its construction that it should be made on the simplest mechanical principles. In its action it is claimed to be perfectly noiseless, positively avoiding all jar or shock when reversing the motion of the machine. No clutches or springs are used in its construction, avoiding all fear of the giving out of such appliances. The fly-wheel is so placed as to enable it to balance the cover perfectly when opening the machine for use. The mechanical features used in the construction of the machine permit it being turned backward or forward, its construction enabling it to do excellent work both ways. In fact, so well convinced are the manufacturers that it will meet with the approbation of every Hardware dealer handling these specialties, they are perfectly willing to ship a machine on approval upon request by any responsible dealer, which machine may be returned at the expense of the manufacturer if found unsuitable for the dealer's trade, which is certainly a proposition worthy of being availed of by any dealer.

NEW CENTURY ROTARY WASHER.

Seamless Steel Padlock.

S. R. Slaymaker, Lancaster, Pa. (John H. Graham & Co., 113 Chambers Street, New York, general sales agents), has recently placed upon the market a new padlock which we illustrate herewith. This is called No. 4848. It is composed of a seamless steel rubber enameled case, having cut bronze levers, and two double-bitted steel keys. This is one of the latest improved padlocks gotten out by the Slaymaker-Barry Co., to whose entire business Mr. S. R. Slaymaker succeeds, giving his entire attention to their original line of specialties.

STEEL PADLOCK No. 4848.

"Were you seasick, Mrs. Selldom-Holme?"

"I was during the first two days, but I was well enough to come on deck the third day. Then I heard a hoarse voice call out, 'Up with the helm!' and that started me again, oh, awful!"—*Chicago Tribune.*

Advertisers' Corner.

The Troy Nickel Works of Albany, N. Y., are mailing to their customers a card of large proportions, carrying at the top in red letters the inscription, "Office Hours Suspended." They state that the time from 9 to 10 a. m. will be devoted to collectors of church subscriptions; from 10 to 11 a. m. to book canvassers, agents, etc.; from 11 to 12 a. m. to people with funny stories; from 12 to 4 p. m. to ladies with tickets for sale, and from 4 to 5 p. m. to people with inventions for sale. The company assert that the rest of the afternoon they devote to miscellaneous calls, and that they attend to their own business at night, while the Troy Nickel Works of Albany, N. Y., "attend to their wants in the Stove Hardawre line, for Alaska is always cold." Another inscription at the bottom of the card under the word "Notice," in large red letters, is to the effect that all their time until election will be devoted to the discussion of politics. Another card which the company are sending out presents a view of their exhibit of Stove Hardware at the Paris Exhibition. This, consisting as it does of Alaska goods of every description, enables the company to state that it is the only exhibit of Stove Hardware at the Exposition.

If there ever was a time to advertise, it is present with us to-day. We, who go about among the manufcturers, hear on all sides of the vast numbers of orders on their files and of their inability to fill them, and for that reason they will not advertise, because, as they state, they could not handle another order. On the other hand, were times dull, as they were a year or two ago, and as they told us then, they could not afford to put any money into advertising. The manufacturer who is far-sighted enough to anticipate the present demand and subsequent future easing up, and gets his name up in the right sort of mediums early and often and keeps it there, is going to get the lion's share of the business. It's easy for the buyer to forget names, even though they may be in a trade for twenty, thirty or even fifty years, and it is your duty to keep your name before the public. You have your old friends, but a new generation of buyers is coming up every day, and they want to know you and the goods you manufacture. Let us tell them for you. We are quite sure we can be of some use to you in our field and would like to be given the opportunity to try. "There's always room for one more," and if there isn't, we'll make room.—*Exchange.*

Increasing Commerce With Porto Rico.

Commerce between the United States and Porto Rico during the two months in which the new tariff act has been in operation shows an enormous increase over that of the corresponding two months of the preceding year. This is more observable because of the assertion which has been frequently made during the past few months that the island is practically impoverished since the storm of last August. Notwithstanding the conditions due to the storm both as to material for exportation and facilities for purchase, the exports to the United States in May and June, 1900, were 50 per cent. in excess of those of the corresponding months of 1899, and the imports from the United States were more than double those of the same months in 1899. In May and June, 1899, the imports into the United States from Porto Rico, as shown by the reports of the Treasury Bureau of Statistics, were $1,461,998, and in May and June, 1900, they were $2,322,124. In May and June, 1899, the exports to Porto Rico from the United States were $666,987, and in May and June, 1900, they were $1,587,478. Thus the imports into the United States from Porto Rico show in May and June, 1900, an increase of 60 per cent. over those of the same months of 1899, both of which occurred prior to the storm of that year, and the exports from the United States to Porto Rico show an increase of 140 per cent. over the corresponding months of 1899.

The figures of the total commerce with Cuba, Porto Rico, Hawaii and the Philippines show in each case a marked growth, especially in exports. To Cuba, the total exports of the year are $26,513,613 against $18,616,377 in the fiscal year 1899, and $9,561,656 in 1898. To Porto Rico the exports in 1900 are $4,640,435 against $2,685,848 in 1899, and $1,505,946 in 1898. To the Hawaiian Islands the exports for the year 1900 are $13,509,148, against $9,305,470 in 1899 and $5,907,155 in 1898. To the Philippines the exports of 1900 are $2,640,449, against $404,193 in 1899 and $127,804 in 1898. To the Samoan Islands the exports of 1900 are $146,267, against $56,522 in 1899, and $39,982 in 1898. To Guam, the exports of 1900 are $13,247, against $6,883 in 1899, and $4,070 in 1898.

The total exports to Cuba, Porto Rico, the Hawaiian Islands, the Philippine Islands, Samoa and Guam for the three years are as follows:

		Fiscal year	
	1898.	1899.	1900.
Exported to—	Dollars.	Dollars.	Dollars.
Cuba	9,561,656	18,616,377	26,513,613
Porto Rico	1,505,946	2,685,848	4,640,431
Hawaiian Islands	5,907,155	9,305,470	13,509,449
Philippine Islands	127,804	404,193	2,640,449
Samoan Islands	39,982	56,522	146,267
Guam	4,070	6,883	13,247
Total to islands	17,146,613	31,075,293	47,463,155

The following table shows the principal exports to Cuba, Porto Rico, Hawaii and the Philippine Islands during the fiscal year 1900:

Articles.	Cuba. Dollars.	Porto Rico. Dollars.	Hawaii. Dollars.	Philippines. Dollars.

Paris Exposition and American Saws.

In connection with their splendid exhibit of saws, saw sets and sawmill specialties at the Paris Exposition, E. C. Atkins & Co., Indianapolis, Ind., have issued a Paris Exposition souvenir booklet designed for distribution among the visitors. It certainly deserves a very wide circulation because it is an extremely fine illustration of typographical artwork and high-grade engraving, at the same time fitly exemplifying in its contents a great American industry. It is printed in both French and English, and goes into all the details of manufacture, presenting scenes showing the different processes. It is also embellished with a steel engraving of the president and founder of the company and a fine illustration of the company's extensive plant. The front cover, which is highly artistic, depicts a scene from ancient Egypt, where a platoon of unskilled and undressed natives are bending low before a high muck-a-muck who is showing them how to cut wood with a saw. The pyramids and the finely displayed sun forming the background would indicate the Egyptian origin of the saw, the sawset and the sunset. The booklet is really a highly artistic publication, reflecting in a characteristic manner the superior goods with which the name of Atkins has always been identified, at the same time illustrating by contrast the growth of the saw-making industry.

REVIEW OF THE MARKETS.

Hardware: Changes in prices since our previous issue have been fewer in number and of less importance. Every prominent line feels the impetus of a forward movement; orders are coming forward more frequently, not of great volume at present, but gradually becoming of greater urgency. Stocks are by no means large among the retailers, and even the jobbers have averaged theirs up, preparing for a steady demand for staples and salable specialties that will make September a very busy month.

Wire Nails: Orders are reaching the mills more frequently as the season advances, and are generally increasing in size, as the feeling gains ground that, with increasing business, less likelihood of lower prices in the immediate future is possible. From the specifications so far received it is evident that stocks are by no means heavy in the dealers' hands, which fact on this leading staple has a tendency to brace the market and strengthen quotations while waiting for the full demand for Fall trade. Quotations may be named as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	$2.20
" less than carload lots	2.25
To retailers in carload lots	2.30
" less than carload lots	2.40

New York prices remain as heretofore:

To retailers, carloads on dock	$2.48
" less than carloads on dock	2.55
Small lots from store	$2.60 to 2.65

Cut Nails: There are indications of an improved demand for Cut Nails this season in comparison with wire nails. The increased life accorded to nails cut in the old fashioned way, and the fact now widely commented upon that wire nails lose their holding power at a much earlier period, is making the cut nails a favorite for shingling and other work subjected to outdoor exposure. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, 2 per cent. off in 10 days:

Carload lots	$1.95
To jobbers in less than carload lots	2.00
To retailers in less than carload lots	2.10

New York prices remain substantially the same, the following quotations representing the market:

To jobbers in carload lots on dock	$2.13
" less than carload lots on dock	2.18
To retailers in less than carload lots on dock	2.31
Small lots from store	$2.30 to 2.35

Barb Wire: No especially favorable conditions for domestic requirements have been evident in the Barb Wire Market during the last fortnight, although Western accounts say that the local demand has kept up so well, stocks are in very satisfactory condition. Prices remain as previously quoted. Quotations for domestic trade remain as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.50
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.55
" " " Galvanized	2.85
To retailers in carload lots, Painted	2.60
" " Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
" " " Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

Plain Wire: Demand for manufacturing requirements has kept the business in very satisfactory shape during August, although occasional irregularities in quotations are heard from outside plants anxious to establish a footing in the trade of greater importance. Current quotations remain, however, as previously established, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

	Base sizes. Plain.	Galv.
To jobbers in carload lots	$2.15	$2.55
" less than carload lots	2.20	2.60
To retailers in carload lots	2.25	2.65
" less than carload lots	2.35	2.75

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)

Nos.			Galvanized
6 to 9	Base		$0.40 extra.
10	$0.05	advance over base	.40 "
11	.10	" " "	.40 "
12 and 12½	.15	" " "	.40 "
13	.25	" " "	.40 "
14	.35	" " "	.40 "
15	.45	" " "	.75 "
16	.55	" " "	.75 "
17	.75	" " "	1.00 "
18	.85	" " "	1.00 "

For even weight bundles, 50 pounds and over, advance price 5 cents per bundle on above.

Cordage: Only a moderate demand exists for Cordage at the present time, the market being nominally quiet. Slight irregularities in prices are occasionally noticeable, but the market may be considered steady at the following quotations for best makes:

		Pounds. Cents.
Manila,	7-16 inch and larger	10¾
"	⅜ inch	11¼
"	¼ inch and 5-16 inch	11¾
Sisal,	7-16 inch and larger	7½
"	⅜ inch	8
"	¼ and 5-16 inch	8½
"	Lath Yarn, Medium and Coarse	7

Manufacturers using low grade Hemp are shading these prices 1-4c.

Linseed Oil: Dean Oil Co. quote as follows:

In lots of less than 5 barrels..... 70 cents per gallon.
In lots of 5 barrels or more..... 69 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

THE PHILADELPHIA TRADE.

The Fall season is now fairly open; salesmen are again on the road, and the orders received from them, as well as the mail orders coming in voluntarily from customers, indicate that retail stocks are not heavy, and are in need of assorting.

It is a little too early to prophesy in regard to Fall trade but this evidence of broken stocks is, to say the least, encouraging. There are also indications that on some lines the cut in prices has gone so far as to be very near the turning point, and it is freely predicted that prices of manufactured goods will, in sympathy with raw material, show a hardening tendency in the next few days. Jobbers are now compelled to re-enter the market to replenish their stocks, and, with the natural demand reinstated, prices must soon begin to readjust themselves.

With the exception of a few items, there have been no marked changes. Wire and nails have been unchanged since the notable decline on April 21st, and the many manufacturers of wire goods claim that on the present cost of wire, it is impossible for them to greatly reduce their quotations.

Collections continue fair, and in fact have been better than usual. This is always a most gratifying sign, and seems to indicate the country is in a prosperous condition.

Export trade is also picking up, thereby making an increased demand, while the stoppage of a number of iron furnaces goes far towards making a reduction in supply.

There is a general impression that a presidential Fall necessarily means a reduced volume of trade, but we do not

Digitized by Google

believe this to be the case. A careful examination of our records, covering a period of years, reveals the fact the six months of the presidential campaign have, in several instances, been periods of unusually good trade, and, as the course of events is so likely to be influenced by belief, it is well to know that the popular impression that presidential years are years of light trade is an error.

BIDDLE HARDWARE CO.

THE BALTIMORE TRADE.

The long visit, to this section, of intensely warm weather, has ended and been followed by an area of much lower temperature accompanied, at this writing, by a delightful rainfall.

Those who have survived the oppressive heat more than welcome the change and both farmers and merchants seem to have renewed their energies as might be indicated by the volume of mail now being received.

Orders from the oyster trade are very prominent, of good size and well assorted for seasonable goods. Indications point to a normal Fall trade, no overstocking, but careful and judicious buying; if this is observed there will be fewer failures than usual about the end of the year, and the prospect of a good and healthy business for the coming Spring.

Collections generally are only fair, there being still many names on the slow list. H. W. WEBB & SONS.

THE PITTSBURGH TRADE.

The consuming demand for Hardware is very encouraging. Travelers, when starting out on the Fall campaign, found their customers needing goods. The few weeks' respite from travelers, during vacation, made holes in their stocks, and orders have been easily secured. This shows that stocks are down to a low point in the hands of retailers and that they only buy as they must have goods; it also shows that consumers are buying freely and have the money to get what they want.

Western Pennsylvania certainly has its share of the good things contained in Mother Earth. In some of our most fertile farming counties, the farmer has his usual crop near to manufacturing towns where he finds a ready market; his ground is underlaid with coal, which brings him a good price, and then come oil and gas, both of which yield him a royalty which alone comfortably maintains his family.

Manufacturing interests are active, the low prices of recent date having resulted in large orders; so that there is no doubt bottom has been reached and we are again on the upward grade. The slump was severe, but short, and we look for good active Fall trade, now that buyers are satisfied they cannot better themselves by further waiting.

LOGAN-GREGG HARDWARE CO.

THE DAVENPORT TRADE.

There is an unusual demand for this season of the year for staple goods, such as barb wire and nails. With regard to nails, it is true that there is a larger and constantly increasing demand for cut nails, especially for shingling, and what may seem still more remarkable, a preference is often given the cut iron nail. Would it not seem strange if, after all that has been said and written with regard to steel nails and steel wire nails, if the trade would just as rapidly return to the old iron cut nails of our fathers as they left them only a few years ago? We would not be at all surprised to see it.

Crops that are harvested are satisfactory, and the corn crop promises well.

Collections were a little slow just before and during harvest, but are now beginning to improve.

SICKELS, PRESTON & NUTTING CO.

THE CHICAGO TRADE.

We are pleased to state that since writing you last, conditions have changed but very little. Our business is still coming in with a rush, and we are being taxed to our utmost to fill orders with our usual promptness. Prices are remaining firm and with but a few slight exceptions, we look for a steady market throughout the balance of the year. Axes no doubt will be firmer than ever, due to the destruction of the plant of the Kelly Axe Mfg. Co. by fire. All seasonable goods for Fall are selling very fast and free and the outlook for business the coming 60 or 90 days is very promising indeed.

Now that our salesmen have all gotten back into the harness and are freshened up after their vacations, we think that we will have as much as we can possibly handle during the next month or two. Aside from this the building trade here in the city promises to liven up, which will help us materially.

WELLS & NELLEGAR CO.

THE ST. PAUL TRADE.

Once, during a cold spell, when the thermometer ranged for several weeks between 10 and 30 degrees below, a man said that it was too bad that the Indians had been driven out of the country, but now we are sorry he was driven away because of the heat we have experienced for more than two weeks. According to the Weather Bureau, it was hotter in St. Paul yesterday than any other point in this United States, except Montgomery, Ala.,—surely we are to be pitied. We would like to store some of this heat to equalize next winter's cold, but we cannot find such an apparatus advertised in *Hardware*, and so judge that none is made, because all good things are advertised in that paper.

We might cover our present condition by saying that business and collections are both very good, but will further explain by saying that the conditions are much improved. Though we shall have a short crop of wheat, hay and potatoes, still we shall have enough so that we can expect a reasonable business, and the result will be a small demand for builders' Hardware and tools, as the farmer will be obliged to buy necessities only, cannot go to extravagant new buildings of any kind. These experiences of short crops are not an unqualified evil, as they tend to call a halt to otherwise foolish and expensive notions.

Prices here are demoralized and weak, the buyer has the best end of the bargain in all cases.

C. W. HACKETT HARDWARE CO.

THE MINNEAPOLIS TRADE.

Business locally suffers somewhat by extreme heat that we have been afflicted with for the past two weeks or more. In the country, harvesting has progressed far enough to show very much better condition than was expected, although in certain sections the crop has been quite a failure, while in others threshing shows a fair average.

We believe there will be a fair volume of business throughout the Fall. People generally are holding off expecting somewhat lower prices on staples, such as nails, bolts, screws, etc. Manufacturers generally are pursuing the hand to mouth policy, buying what they need from day to day, rather than anticipating their wants for any considerable length of time.

W. K. MORISON & CO.

THE SAN FRANCISCO TRADE.

As indicated in this correspondence a fortnight ago, the planing mill workmen went out on strike a week later, the mill owners refusing to yield to their employees' demands that an eight-hour rule for a day's work be substituted for the prevailing nine-hour rule.

At this writing, August 18, the mill owners are saying "No surrender!" They claim they can and will soon have enough non-union operatives from the country to meet all requirements.

Andrew Wilkie, chairman of the Mill Owners Associated Press Committee, made this statement to-day:

"The building trades representative has repeatedly stated in the columns of the local press the past week that the mill owners are weakening; that mills are withdrawing from their organization and conceding the union demands, and seeking a compromise, etc.

Digitized by Google

"These statements are entirely erroneous, and if continued, will result in great injury to the business interests of the city and State.

"As a matter of fact, the mill owners are not weakening, but, on the contrary, are well organized and determined to maintain their present stand to the last. There are many men out who have no interest in this movement and want to work, but through ignorance of the real conditions, or fear of punishment in the event of union success, refrain from such action. Others who have been reluctantly forced into joining unions, would gladly return to work, but for the same reasons."

Naturally enough the tone of expression now being dropped all along the local Hardware line of traffic deplores the perceptable business quiet incidental to the millmen's trouble. Outside of this everywhere current talk, however, B. S. Dougherty, a Cleveland, Ohio, man who has been here eighteen months in charge of the builders' department of the Palace Hardware Co., responded to the seeker after trade news as follows:

"You might say that the 'Corbin' lock, in other words, the lock on the unit plan, which was patented by Byron Phelps, of Seattle, former Mayor of that city, and is being manufactured by P. & F. Corbin, of New Britain, Conn., has been accepted by the majority of architects and contractors as the most practical lock for good buildings. And this is another proof that the West is responsible for the production of many of the best modern appliances. One of San Francisco's large new office buildings is now being equipped with the 'Corbin' lock, and its adoption for several other like new buildings is being favorably contemplated; and in a number of fine residences it is being used and is giving the best results. And don't forget that it has been only a few weeks since the Corbin lock was introduced in this city."

The contract awarded last month by the United States Quartermaster's Department to Holbrook, Merrill & Stetson, for supplying 242 field ranges to be delivered within three weeks, has been filled on time, a large extra force of men having been employed. These ranges, which are built in such form that all of the cooking utensils can be stored in the stove and be securely locked for safe transportation, are sufficient in number to supply an army of 25,000 men.

George W. Pennington, senior member of the firm of George W. Pennington & Sons, steel manufacturers of this city, died Wednesday evening, August 8th, after a brief illness. Mr. Pennington was born in Yorkshire, England, in 1828. He came to the United States in 1863, and located in Pittsburgh, Pa., where he remained until 1883, when he came to San Francisco and established the firm of which he remained the head until about five years ago. He then retired from active participation therein, and his two sons, George and Thomas, assumed the management. The Pennington family is well known and popular in San Francisco's first business and society circles, and the surviving relatives have the sincere sympathy of a legion of friends in their sad bereavement. TRADE PRESS ASSOCIATION.

The Remington Automobile & Motor Co.

The Remington Automobile & Motor Co. has been incorporated under the laws of New Jersey with a capital stock of $250,000, to manufacture and sell automobiles of every description and to build and sell launches and small motor vessels.

Nearly two years ago, William A. Schmidt, of Ilion, devised a plan to construct gasoline motors of the piston type, but so arranged as to reverse the usual motion, and his idea was found to possess great merit, inasmuch as with less material in the shape of gasoline or petroleum much greater horse power could be secured.

A number of local gentlemen at once interested themselves, covered the device with a number of patents and several months ago Mr. Schmidt left his position in the experimental department of the Remington Arms Co. to perfect his motor.

The place of business in New York State will be at Ilion.

It is proposed to at once arrange for the building of automobiles and separate motors in Ilion, and as some very influential capitalists are behind the company there is a strong prospect of another large manufacturing plant soon being in full operation.

From 200 to 300 men will probably be employed before snow flies, and this number will be increased as orders already in prospect are in hand. It is the purpose of the new company to manufacture nothing but the very best and thereby uphold the great name of Remington.

The officers of the company are: President, Philo E. Remington; Treasurer, S. C. Burch; Secretary, P. A. Stubblebein.

Commercial Methods in Australia.

I wish to call attention to the rules governing trade between Great Britain and the Colonies. If American shippers desire to build up an export business with Australia, they must remember that the following customs prevail:

(1) Most Australian business houses have their own branches in London, doing all their British and foreign buying; or they have an agent or buy direct from the manufacturers.

(2) Terms of payment are arranged in several ways. Where branch houses are established, the suppliers deliver their orders at the ship's side, handing the buyer the ship's receipt with their invoice. The accounts are then payable in thirty days less a discount of 2 1-2 per cent., or in seven days less 3 per cent. This custom also applies to agents' transactions, where, of course, the agent receives a commission for his services. Where there is neither a branch office nor an agent, a letter of credit is as a rule established with a banker, and the suppliers' draft against documents at ninety to one hundred and twenty days after sight is paid, the charge for exchange being paid by the buyer here.

(3) Another system is for the merchant here to instruct his banker to receive documents for any shipments, naming the firm supplying, and to pay cash for the face value, collecting the money from the merchant here on receipt of documents by mail. This is done only when buyers and suppliers are well known to, and on the best terms with, each other.

(4) Another custom prevails by which an indent is forwarded direct to the supplier or manufacturer, with instructions to present documents at a bank or office and obtain from 75 to 80 per cent. cash, and to draw at sixty to one hundred and twenty days for the balance, including pre-

STANLEY RULE & LEVEL CO.
NEW BRITAIN, CONN., U. S. A.
Improved Carpenters' Tools.
SOLD BY ALL HARDWARE DEALERS.

paid freight. This, as a rule, applies to transactions between people not so well known to each other.

(5) In some instances, merchants will remit a bank draft (for the estimated value of an indent) direct to the supplier, with the object of getting extra discounts; but this is done only when the merchant has plenty of spare cash and the supplier is well known and has the reputation of being absolutely safe.

(6) One other method is employed in first transactions only. Either a bank reference, a letter of credit, or a draft for the full value of the purchase is demanded as a mark of good faith, pending proof of the position of the buyer.

There are times when special arrangements are desired for special countries; but as a rule the above covers all wants, and a London or New York draft on any bank of good repute is considered as good as gold.

I have gone into detail in this matter because I am sure that unless our exporters study the methods employed by British merchants, they will never build up a great export business here. I firmly believe that our export business depends upon a thorough knowledge of the principles stated above.

F. W. GODING,
Consul.

Newcastle, June 18, 1900.

Prosperity of Farmers.

"A glance at the following figures," says J. Sterling Morton's *Conservative,* "will show the almost unprecedented increase since 1895 in the value of the things the farmer produces. In the years between 1895 and 1899 the annual value of the farmer's principal crops increased as follows: Corn, from $544,983,534 to $629,210,110, or 16 per cent.; wheat, from $237,938,988 to $319,545,269, or 34 per cent.; oats, from $163,655,068 to $198,167,975, or 16 per cent.; cotton, from $260,338,096 to $332,000,000, or 27 per cent.; tobacco, from $35,574,220 to $45,000,000, or 30 per cent.; flax, from $12,000,000 to $24,000,000, or 100 per cent. The total value of the crops of 1899 measured by a gold standard were $322,000,000 more than the value of those of 1895. During this period the live stock of the farmer increased in value by $633,000,000. In so far as his products are concerned, the farmer is to-day nearly $1,000,000,000 better off than he was in 1895, not to mention the cancellation of farm mortgages, the building of new and better homes, and the buying of better implements."

Merchant and "Missionary."

Here are some significant words which it would be well for Americans seeking foreign trade to heed:

"German business methods are superior to ours. The American merchant too often says: 'You want this; it is the latest and best thing out.' And while he is arguing his customer into a good humor, the German says: 'Tell me just what you want and you shall have it by the Barbarossa.' The American wants to satisfy himself; the German wants to satisfy his customer. The German is a merchant, while too often the American is a missionary. If the Germans would improve the quality of their wares and give half as much attention to style as Americans do, we would have to look out for our laurels. But, in view of their enterprise, we have now a hard competitor in this people."

The above suggestions are found in the report of the United States Consul at Sydney, New South Wales, where German capital is about to establish sample rooms for the display of goods of German manufacture. This Consul is conscious of at least one defect in American mercantile methods and is alive to the importance of correcting it.—Exchange.

Three hundred and sixty mountains in the United States are over 10,000 feet high.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Chalmers, Ind.—The Kellogg Hardware & Implement Co. has been incorporated. Capital stock, $4200. The directors are A. R. Jamison, G. A. Jamison, S. H. Jackson, Thomas Kellogg and Seth J. Kellogg.

Clare, Mich.—Andrew J. Doherty, it is reported, will open a branch store at McBain.

Des Moines, Ia.—Articles of incorporation of the Garver Hardware Co. have been filed for record with the county recorder. The company will succeed to the business of J. A. Garver and carry on the business of retailing and wholesaling Hardware, glass and paint. The capital stock paid up is $35,000. John A. Garver is president; John A. Garver, Jr., vice-president; C. W. Pitcairn, secretary and treasurer, and C. T. Gadd, manager.

Escanaba, Mich.—Ricke & Seymour, carrying a line of Hardware, farming implements, groceries and general merchandise, have opened their store.

Hartford, Conn. — Ralph E. Page, who had charge of the builders' Hardware department at Francis & Co.'s, has opened a new store at 419 Main Street, in the Linden. Mr. Page will carry a full and complete line of Hardware, making a specialty of builders' and special trim Hardware. He has also purchased the stock and good-will of the Beam Cycle Co., and will carry a full line of bicycles and bicycle sundries. He will continue the general repair shop which Mr. Beam conducted. Mr. Page, having had twelve years' experience in the Hardware business, intends to keep a live and up-to-date store.

Owatonna, Minn.—The Nelson & Bouquet Hardware Co. has been incorporated to deal in Hardware. Capital, $200,000. Incorporators: S. R. Nelson, E. Bouquet and G. R. Kinyon, all of Owatonna.

Owosso, Mich.—The Owosso Hardware Co. has been incororated to buy and sell Hardware. Capital, $10,000. Incorporators: F. W. Pearce and W. A. Achard, both of Owosso, and F. Achard, of Saginaw.

St. Louis, Mo.—The George A. Rubelman Hardware Co. announces an increase of capital from $50,000 to $60,000.

Sumter, S. C.—James H. Buines, of this place, is contemplating opening a Hardware store in Camden.

Wellston, O.—Ervin Bros. of Jackson having rented the Keiling room next to the town house, will open a branch Hardware store.

Changes and Improvements.

Alamosa, Col.—W. C. Tomlins has sold a half interest in his Hardware business to J. A. Johnston. The style of the new firm will be Tomlins & Johnston.

Asbury Park, N. J.—Buchanon & Smock will move their Hardware and paint store from Asbury and Main streets to their new lumber yard, across the railroad.

Beaver, Pa.—J. B. Wilson & Son have sold to Wilson Bros. their Hardware and farming implement store on Third Street, consideration private.

Berkley, Va.—C. B. Gibbs is having the large store room on Chestnut street, recently vacated by A. H. Taylor, thoroughly remodeled and fitted with modern and convenient equipments for conducting an up-to-date business.

Boyertown, Pa.—Geo. P. Raha has purchased the well known Hardware store of Dr. Thos. J. B. Rhoads on Third street, consideration private.

Charleston, S. C.—J. B. Stokes is having a new brick store erected on Oak Street.

Fairmount, Ill.—R. R. Akers has purchased a half interest in B. F. Dougherty's Hardware store.

Fitchburg, Mass.—Damon & Gould, whose large Hardware store was recently burned, and who are the owners of a store here and another at Athol, are about erecting a handsome five-story block. The firm will occupy the entire block, which will have a frontage of 45 feet and a depth of 102 feet, and will be one of the finest blocks in the city.

Gainesville, Fla.—The old firm of E. Baird & Co., Hardware, has been succeeded by the new concern of the Baird Hardware Co., Incorporated. E. Baird is president.

Homer, Mich.—The addition to the rear of Strong Brothers' Hardware store, which will extend on Sophia street, has been commenced.

Lewisburg, Tenn.—M. G. Nowlin of this place has purchased the interest of John Fowler in the Hardware company of Woods & Fowler.

McIntosh, Minn.—The Rosholt-Berg Co. are moving their Hardware stock into the building formerly occupied by them as a general store.

New Market, Ind.—Tilghman Easley has bought out the Crist Hardware store.

Pomeroy, O.—The Skinner Hardware Co. are tearing down the one-story frame building on Second street, and will begin at once the erection of a fine three-story building.

Pulaski, Tenn.—McLaurine, Braden & Co. have sold their stock of Hardware, farming implements and machinery to Nat F. Cheairs and A. E. Greenlaw of Spring Hill. The late firm had long been engaged in the Hardware business in this city and had built up a large trade.

Roanoke, Va.—Work has been commenced on the extension of Nelson & Myers' storehouse, and when it is completed the firm will have one of the largest Hardware stores in this section. The completed addition will be three stories of brick and stone, 25x65 feet, which increased area they have long needed for their rapidly growing business.

Toledo, O.—Birkmayr & Rodemich Bros. are now located in their new store at 408 and 410 Summit street. They occupy four floors, 40x125 feet, each one of which is completely filled and handsomely arranged. The first floor with its oak furnishings is taken up with kitchen utensils, tools, Hardware and cutlery. In the centre of the room are several large oak cases devoted to imported nickel and agate ware. The stoves are located on the second floor; the third floor is devoted to wooden ware, refrigerators, etc., and is in keeping with the other floors. The fourth floor is used for surplus stock and the basement is divided into a storage and work room.

Unionville, Conn.—The firm name of John S. Parsons & Co. has been changed to the Parsons Lumber & Hardware Co.

Western, Neb.—Peter Waldorf, Hardware dealer, will at once begin the erection of a two-story brick building, 50x90 feet. It will be one of the best business houses in the county.

Business Embarrassments.

Saginaw, Mich.—Under Sheriff Burgess is busy taking inventory of the Hardware stock of R. H. Gillett & Co., of which the sheriff has taken possession.

Fires in Hardware Stores.

Atlanta, Ill.—W. W. Mix's Hardware store was destroyed by fire. Loss not stated.

Council Bluffs, Iowa.—Cole & Cole's Hardware stock was badly scorched and other damage inflicted, amounting to eight hundred dollars ($800.00). Fully insured.

Hanover, Pa.—J. C. Tanger Hardware Co.'s warehouse was destroyed by fire.

Blue Hill, Neb.—McNeer's Hardware stock has been burned.

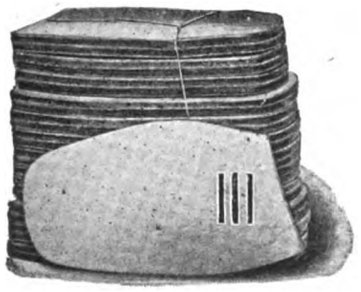
Lydia, Minn.—The Hardware store of John Dietrich has been burned. Loss, $3,000; insured for $1,200.

Pittsburgh, Pa.—H. D. Reiter, 249 Frankstown Avenue. Loss to building and stock through fire and water, $6,000. Fully insured.

Rochester, N. Y.—Fire, smoke and water have destroyed Hardware stock to the value of about $3,000 in Morris Greenwald's store at the corner of Joseph avenue and Pryor street.

Sedalia, Mo.—The Hardware store of F. Taylor Cain, 116 West Main Street, has been damaged to the extent of $1,000 by fire.

Burglaries in Hardware Stores.



Albion, Mich.—Welling & Cressin, revolvers.

Fairbury, Neb.—John Thornton & Son, pocket knives, revolvers. $75.

Manawa, Wis.—E. G. Moore, guns.

Springfield, Mo.—St. Louis Hardware Co., pocket cutlery, revolvers, etc. Amount not stated.

Baxter Schenkelberger & Co,
350 Congress street, Boston

Newfoundland's Wonderful Iron Mines.

"What the gold reefs of Johannesburg are to the Transvaal the Wabana iron beds are to Newfoundland," says the New York *Tribune*. "They form immense deposits of rich red hematite ore, three miles long and several hundred feet wide, and showing 34,000,000 tons in sight above the water. The beds dip downward at an angle of eight degrees, and it is believed that they extend below the sea in practically unlimited quantity, though what is now in sight will suffice for a generation's work. To all intents and purposes the mine is open quarry. The ore is got at by chopping off a surface covering of earth and rock and then loosening the hematite with charges of dynamite.

"The deposit is one of nature's freaks. It is a perfect reproduction of a tiled floor. Countless millions of cubes of mineral are laid out with rectangular precision, following the trend of the stratification, and these seem to have been cemented and forced together by some giant machinery in prehistoric days. Layer upon layer of these cubes is seen in a vertical section of the mine, and the lines of cleavage are as clearly defined and the general arrangement is as perfect as a child's box of blocks. The only difference is that one cannot lift out one of these mineral cubes with the fingers but a charge of dynamite fixed in a portion of the deposit by a steam drill shatters it for an area of many feet in every direction, and separates the solid mass into its thousands of little bricks, each about three inches square and as perfect in alignment as if produced by an artist. No mining, in the customary sense, is needed. The deposit lies open to the sun, and all the work involved is the loosening of successive sections and the gathering up of the fragments, which is done by men shoveling them into ore cars, which run on a light cable railway to a pier on the seashore.

"The mine occupies the northern end of the island, and hard by is a sheltered cove, where a pier has been built whence 10,000 tons of ore may be loaded in a day. The laden cars run down an incline by gravity and are upset automatically, their contents falling into one of ten pockets constructed in the interior of the pier. Each pocket takes 1,000 tons, and can be emptied into a steamer's hold in ten minutes. Two ships a day can be loaded there when business is brisk. The output for seven months last year was 310,000 tons. From 1,000 to 1,500 men are employed this year, as the output is to be trebled, and to do that the force of employes will have to be still further augmented. For years the surface workings will continue, and even when regular underground mining is required there will be none of the deep descents associated with coal and copper mines.

"The ease of working and the proximity to tidewater make this deposit one of the most advantageous from an economic industrial point of view that capitalists could possess. The cost of mining the ore and putting it on shipboard is but 25 cents a ton, and the freight to Canada only 25 cents more. 50 cents being charged for its conveyance to Europe or the United States. It is in great demand in Germany, where ironmasters work it in very conveniently with poorer ores and large quantities of it are also absorbed at Philadelphia and Baltimore. The price at which it sells there yields the owners of the Wabana mine a profit of $1 a ton, and as contracts for the delivery of 500,000 tons have been signed for this season it is very easy to see that there is a handsome dividend in it for the shrewd capitalists who control it."

THE OGDEN AUTOMATICALLY REGULATED LIQUID DOOR CHECK and SPRING

"The Ogden Check" in Brief is

The only check that controls the door entirely.
The simplest and strongest check made.
Easily applied by anyone of ordinary intelligence.
Refilled with liquid, when necessary, through the filling chamber without removing from the door.
Positively regulated under all conditions and cannot leak.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Adrian, Mich.—The American Screen Door Co. has been incorporated with a capital stock of $20,000.

Binghamton, N. Y.—The Gilbert Sled Factory, which went into the hands of a receiver, has resumed business at Bainbridge under a new management. The company has been incorporated and capitalized at $15,000, and is composed of F. E. Gilbert, Frank Lyon and William Carl. Mr. Gilbert is president and Mr. Lyon secretary and treasurer.

Cleveland, O.—The Universal Bolt & Nut Lock Co. has been incorporated. Manufacturing a novelty and nut lock. Capital, $50,000. Incorporators: H. C. Jordan, E. W. Rader, H. Randolph, A. J. McIntosh, C. M. Harris.

Depew, N. Y.—A new knife and cutlery works has been opened at this place by Michael Dobbins.

Little Valley, N. Y.—The factory for the Korn Razor Mfg. Co. is being rapidly built by the contractors, Charles Swanson & Co., and will be ready for occupancy shortly after the first of September.

Lynchburg, Va.—The last step in the reorganization of the Lynchburg Hardware Mfg. Co., under the name of the Lynchburg Lock Works, has been taken by the election of W. R. Winfree as secretary and treasurer.

New Philadelphia, O.—The Ohio Stove Pipe & Mfg. Co. has been incorporated, with a capital of $25,000.

Paterson, N. J.—A certificate of incorporation has been filed with the County Clerk, wherein it was set forth that the Fischer Mfg. Co. will begin the manufacture of novelties and household articles at 30 Dale Avenue. The incorporators are Frank, August and William Fischer, Sr., with an authorized capitalization of $50,000.

Richmond, Ind.—The Richmond Post Co. has been incorporated. Manufacturing fence posts. Capital, $50,000. Incorporators: R. C. Smith, R. A. Benton, A. G. Murray and R. E. Kirkman, all of Richmond.

Rochester, N. Y.—The Rochester Sash Lock Co. has been organized in this city, with a capital stock of $100,000, for the manufacture of the well-known automatic steel sash lock. The lock is adapted to any form of window and is especially well suited to railroad car windows. The officers of the new company, which will manufacture the device in this city, are: George A. Archer, president; L. D. Perrin, vice-president; Peter A. Vay, secretary; Natt Squier, general sales agent. The main offices of the company will be in the Cutler building.

Troy, N. Y.—The Troy Mantel & Grate Co. have filed with the secretary of state a certificate of incorporation. It is organized with a capital of $30,000. It will manufacture and deal in mantels, grates, tile, gas and electric fixtures. The directors are George S. Emerson of Lansingburg, Harriet A. Emerson of Lansingburg, and Charles D. McCarthy of Troy.

Youngstown, O.—The Youngstown Range & Stove Co. have begun operations. The building for which ground was broken less than five months ago is a three-story structure, 50x100 feet, and is equipped with the very latest and most approved machinery for the manufacture of stoves and ranges. John O. Pew, who is the president and general manager of the concern, states that the plant will employ a force of 35 or 40 men and will have a capacity of turning out 20 finished ranges a day. The officers of the company are John O. Pew, president and general manager; Mason Evans, secretary and treasurer; R. J. Pierce, superintendent; L. E. Cochran, G. M. McKelvey, J. P. Kennedy and John O. Pew, directors.

Changes and Improvements.

Athol, Mass.—The new Gay & Ward building is now completed and is said to be the largest structure in the world used exclusively for the manufacture of milling cutters and small tools. The main building is three stories, 140x65 feet, with a two-story annex of 60x55 feet.

Big Rapids, Mich.—A meeting of the directors of the Michigan Heater Co., Detroit, and the Parlor Furnace Co., of this city, for consolidation, was held recently. Officers were elected as follows: President, H. D. Kellar, Detroit; vice-president, Ed. C. Morris, Big Rapids; secretary, T. E. Robinson, Detroit; treasurer, M. E. Darrah, Big Rapids; directors, N. J. Robinson, M. I. Kellar, Ed J. Marsh, Dr. W. T. Dodge. A large building will be constructed immediately on the east side and as soon as completed from 50 to 60 men will be employed. The consolidated company is to be known as the Michigan Heater Co., and will start in with a paid up stock of $30,000.

Cambridge City, Ind.—The National Drill Co. of Dublin, which is about to remove its plant here, is working on its large brick building with quite a number of hands. The industry is quite an addition to this place. It will employ from fifty to seventy-five people.

Chicago, Ill.—The Maryland Foundry & Machine Co. has increased its capital stock from $50,000 to $75,000.

Harrisburg, Pa.—It is stated that the Chesapeake Nail Factory will resume operations about September 1 and at that time a number of new machines will be put into use. The factory, which suspended some time ago at Georgetown, this State, is being dismantled and some of the machinery, which has been used but a comparatively short time, has been brought to this city.

Muncie, Ind.—Kitselman Brothers, who own the wire fence factory at Ridgeville, and who erected buildings in Muncie to be occupied as a factory after they had removed the plant from Ridgeville, have commenced to bring their office furniture to this city. The machinery of the factory will be removed immediately afterwards. Within two months the plant in Muncie will be in running order.

Recent Embarrassments.

Adrian, Mich.—The Page Fence Co. has gone into the hands of a receiver. The plant at Monessen, Pa., will also be in charge of the receiver.

Cincinnati, O.—H. J. Cordesman, who has been doing business as the Cordesman Machine Co., makers of machine tools, has filed a deed of assignment in the Insolvency Court, making T. A. Bruhl his assignee. The assets are about $25,000 and the liabilities the same.

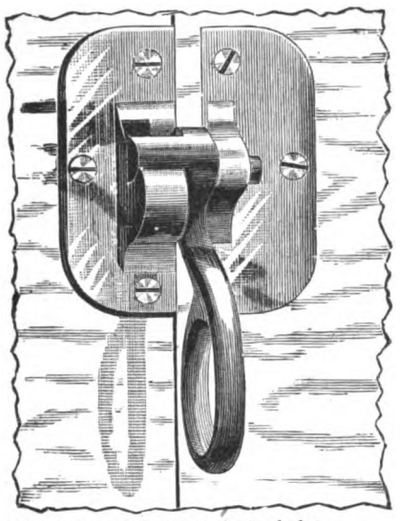
New York, N. Y.—The Vibration-Proof Nut Co., 61 Cortlandt Street, has made an assignment.

Recent Fires.

Alexandria, Ind.—The entire plant of the **Kelly Axe Mfg. Co., valued at $800.000. was** destroyed by fire August 19. It was the **largest axe factory in the world. employing** about a thousand men when running at full force. W. O. Kelly, president of the company, who formerly owned a factory in Louisville, removed to this city in 1883. The company went into the hands of a receiver three years later. The factory was north of the city, outside the corporation, and the Fire Department could not give any assistance. The fire cut off the water supply of the factory and left no means of fighting the flames.

Corning, N. Y.—The Corning stove works, of which G. W. Drake is president and L. D. Streeter vice-president, has suffered from fire. The damage is $5,000; fully insured.

East Highgate, Vt.—Fire broke out in the paint shop of O. S. Rixford's axe factory recently, but within an hour it was extinguished. The building was not much harmed. The water did considerable damage to a large amount of finished stock, including several hundred axes and scythes.



Miscellaneous.

Terryville, Conn.—At the annual meeting of the stockholders of the Eagle Lock Co. the board of directors for the ensuing year were chosen as follows: M. C. Ogden, of Brooklyn, N. Y.; R. J. Plumb, of Terryville; R. H. Laimbeer, of New York; H. B. Plumb, of Brooklyn, N. Y.; J. A. Carter, of Geneva, Ohio; H. L. Balch, of Brooklyn, N. Y., and F. L. Wilcox, of New York. Subsequently the directors elected the following officers: President, M. C. Ogden; treasurer, R. J. Plumb; secretary, H. B. Plumb.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Akron, Ohio.—The Akron Bicycle Buggy Co. has been incorporated, with $100,000 capital, to do a general automobile business. Incorporators: F. E. Smith, D. F. Ryan, O. C. Few, F. Seiberling and W. W. Morrison, all of Akron.

Auburn, N. Y.—A company has been formed under the name of the Auburn Ball Bearing Co., with the following officers: President, Mark D. Knowlton, Rochester; vice-president, Fred H. Wiggins; secretary, Harry G. Latimer; treasurer, John E. Myer.

Binghamton, N. Y.—Eureka Cycle Co., 4 Main Street, repairing.

Buffalo, N. Y.—The Kelsey Co. has been incorporated, with $25,000 capital, to deal in cycle parts and supplies. Directors: Charles E. Kelsey, C. L. Kelsey and Emma E. Blood, all of Buffalo.

Carolina, R. I.—H. L. Barber, repairing.

Dover, Del.—The Victor P. De Knight Gun Co., of Washington, D. C., has been incorporated here, with a capital stock of $1,000,000.

Hudson, Mich.—E. H. Tullis, repairing.

Kittery, Me.—Charles Adams, repairing.

Middletown, Conn.—The New York Motor Vehicle Co., capitalized at $500,000, is to occupy the Worcester Cycle factory, and will manufacture only motor vehicles. The principal design is of French invention and the motive power steam. The factory will be equipped for running to its full capacity. It is planned to have the factory ready for occupancy about September 1.

New Britain, Conn.—The representative of a Springfield (Mass.) concern visited this town recently looking for a site for a factory for the manufacture of bicycles and Hardware.

North Constantia, N. Y.—Charles Cottet.

Owego, N. Y.—M. H. Gaskill, 88 North Avenue, repairing.

Philadelphia, Pa.—The Hammer Coaster Brake Co. has been incorporated, with $10,000 capital.

Portland, Me.—The Standard Spoke & Nipple Co. has been incorporated to manufacture and deal in spokes, etc., for bicycles. Capital, $1,200,000. Incorporators: G. H. Gilman, G. J. Capewell and G. J. Capewell, Jr., all of Hartford, Conn.; B. S. Keefer, of Millertown, and J. H. Drummond, Jr., of Portland.

Raymond, N. H.—Waldo Glidden, repairing.

Romeo, Mich.—John S. Newberry, Main Street.

Shelburne Falls, Mass.—The Bickel Mfg. Co. is nearly ready to begin the manufacture of its improved bicycle pedals and wrenches. A large part of the machinery has been installed, and as soon as a motor arrives to furnish power a force of men will be set at work.

St. Catherines, Canada.—The Hamnott Mfg. Co. is about to establish a plant for the manufacture of bicycles at this place. The Council has granted the new enterprise a bonus of $15,000 and a loan of $10,000, payable in fifteen years.

West Townsend, Vt.—N. W. Wood & Son, Page Building, repairing.

Syracuse, N. Y.—There will be two large automobile factories operating in Syracuse this Fall. E. C. Stearns, besides building automobiles at the old Barnes plant as a branch of the Anglo-American Rapid Vehicle Co., will have another factory for building automobiles. Syracuse will within the year, he promises, hold as decided a supremacy in New York State in automobile production as it has held in bicycle production.

York, Pa.—The articles of association for the York Check-Rein Hook Co., Ltd., capital stock $2,000, have been filed in the office of Recorder Bowman for record. The company is composed of Lee S. Stoner, A. G. Galbreath, F. C. Uffleman, R. G. Andrews and Cornelius M. Fulton. The officers are Cornelius M. Fulton, chairman, and Lee S. Stoner, treasurer and secretary.

Changes and Improvements.

Bay City, Mich.—Papers have been executed which transferred to the Ayers Mfg. Co., of San Francisco, the Munn machine shop, for the purpose of starting a factory for the building of various kinds of automobiles under inventions of W. F. Ayers. The work of remodeling the shop will begin at once.

Birmingham, Ala.—The Alabama Cycle Co. has removed to 127 South Twentieth Street.

Buffalo, N. Y.—At the recent meeting of the Cycle Trades Protective Association W. M. Lewis, of the Wisconsin Wheel Works, and W. G. Gates, of the Baldwin Cycle Chain Co., were elected trustees, vice Messrs. Manson and Andrae, resigned.

Buffalo, N. Y.—The E. R. Thomas Motor Co. is rapidly getting its motorcycles into shape for marketing. Among other things, it has just adopted the name "Autocrat" for the line.

Cleveland, Ohio.—The Buckeye Rubber Co., of Akron, has filed a mortgage for $200,000 to the Central Trust Co., of New York. It was given to secure a bond issue of $200,000. The bonds mature in ten years and draw interest at the rate of 6 per cent. per annum. It is provided in the mortgage that $100,000 shall be used for the erection of the new plant of the company at East Akron. The balance of the issue is to be held to provide the means of building additions.

Derby, Conn.—The Howard & Barber Co. is closing its bicycle department.

Des Moines, Iowa.—W. Wenneberg succeeds Wenneberg & Jones.

Great Falls, Mont.—Bennett & Hirsch have dissolved.

Hagerstown, Md.—This place is interested in the report that the trust has decided to have the Crawford factory turn out 50,000 bicycles during the coming season.

Kenosha, Wis.—The trust's factory, the Sterling plant, was closed for all time recently, the closing of the Sterling marking the end of the history of Kenosha as a bicycle manufacturing town. The machinery of the plant will probably be shipped to Chicago, where the Sterling bicycle possibly may be made by the Western Wheel Works.

Westfield, Mass.—The manufacture of Cleveland bicycles will doubtless next year be concentrated at this place. Information to that effect is said to have been received at the Toledo factory, and matters are being quietly arranged for the removal of the machinery, etc.

York, Pa.—H. Yost has removed to 3 Edgar Street.

Recent Embarrassments.

Amesbury, Mass.—George L. Knights has filed a petition in bankruptcy. Liabilities, $1,485.67; assets, nominal.

Brockton, Mass.—B. D. Bishop has filed a petition in bankruptcy. Liabilities, $877; assets, $241.

Haverhill, Mass.—F. D. Fernald has filed a bankruptcy petition. Liabilities, $4,176.29; assets, $2,250.

South Bend, Ind.—Roberts & Rost have had a receiver appointed.

Washington, D. C.—Robert C. Jones & Co., 513 Ninth Street, have assigned. Liabilities, $2,845.28; assets, $1,042.76.

Wauwatosa, Wis.—W. J. Potter has filed a petition in bankruptcy.

Recent Fires.

Albany, N. Y.—E. A. Norris, 325 Central Avenue.

Buffalo, N. Y.—G. A. Hosmer & Co., manufacturers of bicycle cement, had one of their warehouses destroyed by fire recently; but, as it was separate from the main building, business will be continued as usual. Rebuilding of the burned premises has already been begun.

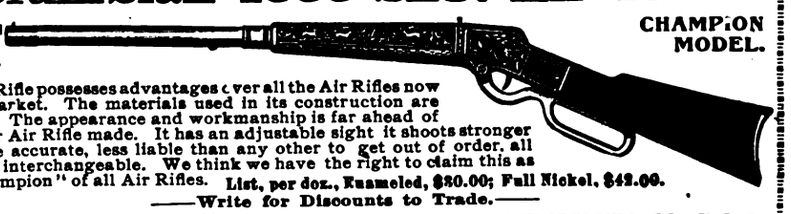
Chicago, Ill.—George Mason & Co., sporting goods dealers at 121-127 Dearborn Street, have suffered from fire.

Greenville, Miss.—H. C. Graham, mainly water damage.

McMinnville, Ore.—Fred Hibbs. Loss, $1,600; insurance, $800.

Recent Burglaries.

Niagara Falls, N. Y.—W. H. Davey, First Street. Money drawer robbed of $5.



Wichita, Kan.—Lisbon Bros., Douglas and Lawrence Avenues. Two bicycles stolen.

Columbian 1000-Shot Air Rifle.

Patented Oct. 24, 1893.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. **List, per doz., Enameled, $30.00; Full Nickel, $42.00.**

Telephone 1445 Franklin.

Made in Four Widths: ½, ⅝, ¾ AND 1-INCH.

CARY MANUFACTURING CO.,
19 and 21 Roosevelt St., New York.

ALL THE NEWS. HARDWARE HARDWARE EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

It has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its **twentieth** volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

. . . PUBLISHED BY . . .

THE HARDWARE PUBLISHING CO.,
275 Broadway, New York.

PRICE $1.00 PER YEAR FOR 24 ISSUES.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

Blake Lamb Traps.
Lightest and Strongest Made.
For 40 years the favorite wherever used. Send for catalogue to the
HAWKINS CO., Successors,
Waterbury, Conn.

ESTABLISHED 1774.
HIGH GRADE **AUGER BITS.**
(BLACK TWIST)
JOB T. PUGH, PHILADELPHIA.

"COULD NOT KEEP HOUSE WITHOUT IT."
Sickels, Preston & Nutting Co., Davenport. Iowa. [*Wholesale Hardware*]: We would not know how to keep house without HARDWARE. The review of the Hardware markets, trade reports and editorials are frequently read before letters are opened that are received in the same mail with HARDWARE.

"THE MOST HELPFUL AID."
Pike Mfg. Co., Pike Station, N. H. [*Whetstones, Oil Stones, etc.*]: We like to keep our name and our wares before the public in a modest way. We have found HARDWARE the most helpful aid toward accomplishing that purpose.

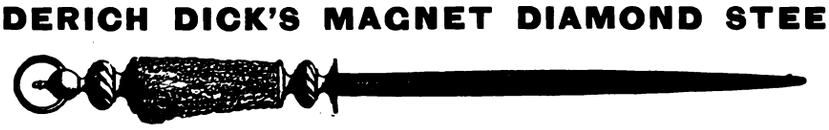
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.



and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

PHOENIX KNIFE COMPANY'S POCKET KNIVES.

BRILLIANT SELF-MAKING GAS LAMP.

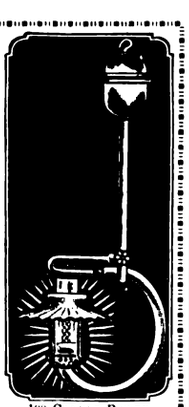
Third Season and Still in the Lead.

CLAIMS THAT INTEREST BUYERS.

We don't claim to make the cheapest lamp, but we do claim to make the best, most reliable and practical lamp in the market, one without fault or objection, that is always right and ready. There are more of them in use than all other Gasoline lamps combined, giving perfect satisfaction and taking the place of thousands of the others that are thrown aside as failures, that's why the trade want the Brilliant for their Stores, their Homes, and to Sell. It's light, not fixture, that is wanted.

Brighter than Electricity, Safer and Better than Kerosene or Gas.

200 Candle Power light 18 hours, from 1 quart of Gasoline.

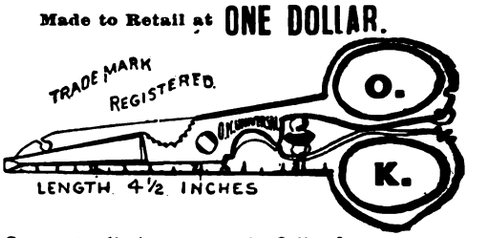


The Lighting season is here. Start it right. Don't be misled by impossible claims of irresponsible parties.

We are lamp manufacturers and have been for 35 years.

An agent wanted in every town.

BRILLIANT GAS LAMP CO.,



GEORGE BOHNER, Agent. **42 State St., Chicago, Ill.**

THE NEW YORK PUBLIC LIBRARY
ASTOR, LENOX AND TILDEN FOUNDATIONS

HARDWARE

At the regular meeting in August of the board of Governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership in the club: Henry H. Hogins, 130 Pearl Street, New York; Daniel Arthur, 188 Front Street, New York; Archibald Paull Mitchell, 275 Broadway, New York.

Thomas W. Munroe, New York store manager of the Allerton-Clarke Co., returned on the City of Rome last week from his vacation trip abroad, having been "on the go" for six weeks. He visited every point of interest in England, Scotland and Ireland, after having become satiated with the glories of the Paris Exposition and the Parisian sights of vivid description. He fully enjoyed a vacation which was an ideal one for a Gothamite.

T. H. Gossett, who for nine years has been well known through the Hardware trade as the Southern representative of John H. Graham & Co., has recently joined the staff of salesmen representing the Peck, Stow & Wilcox Co., Southington, Conn., and New York City, in whose extensive establishment he will occupy a similar postion to that previously held by him.

The Michigan Wheelbarrow & Truck Co., of Saginaw, Mich., were incorporated in May, 1900, and have a very complete plant—all new. Machinery is not all installed as yet, but they have been making goods for some time. Practically forced to do this on account of the receipt of a large number of orders, both domestic and foreign, in reply to their announcement sent out a few weeks ago.

Hobart B. Ives, of the H. B. Ives Co., New Haven, Conn., returned last week from a delightful visit to the Paris Exposition. Coming back on the City of Rome, and having superb weather conditions, he returns greatly rested and refreshed. He took a flying trip through England, visiting many points of interest; passed over to Scotland and Ireland, seeing more in the allotted time than he believed would be possible during an absence of only six weeks.

The Pacific Coast Hardware and Metal Association recently elected the following officers for the ensuing term: President, Charles F. Tay, of the George H. Tay Company, San Francisco; first vice-president, Frederick Motte, of Motte & Hunt, Tacoma; second vice-president, L. C. Sheller, of the Union Hardware and Steel Company of Los Angeles; third vice-president, T. D. Honeyman, of H., De Hart & Co., Portland; treasurer, Joseph Sloss, of Miller, Sloss & Scott, San Francisco; executive committee: Wakefield Baker, A. A. Watkins, A. L. Scott, H. J. Martin, W. R. Wheeler, Andrew Carrigan and George S. Scovel.

The Michigan Stove Co., Detroit, Mich., and Chicago, Ill., who are noted for publishing gems of the printer's art as a part of their usual advertising, have recently issued for trade distribution a large hanger covering ten square feet, in which is illustrated five distinct views of the "Art Garland," their most distinctive production in the way of parlor stoves The hanger is made very attractive with a large distribution of roses and other floral ornamentation, showing quite a display of high art that ought to make a stove dealer fairly hustle to get the specimen of stove art so happily pictured early on his floor.

The Enterprise Mfg. Co. of Akron, Ohio, have recently reorganized the company, and greatly increased their facilities for the manufacture of fine fishing tackle, a greatly increased trade in which they have early anticipations of experiencing this season. They announce that a new price list is in the hands of the printer, which they hope to mail to the trade at an early date. They have recently added to their business a large and well equipped fishing reel plant, and their line of fish hooks has been largely augmented by the acquisition of the factory of the American Fish Hook Co. of New Haven, Conn.

The monthly meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, Boston, on Wednesday, September 12, promptly at 5 o'clock P. M. Dinner will be served at 5.15 o'clock P. M., the business meeting taking place immediately after the dinner. As this is the first Fall Meeting, the committee did not engage any regular speakers, it being desired that every member should come prepared with some fresh ideas relative to the Retail Hardware Business, and what is for the welfare of the association. The replies to the circulars sent out some months ago to the manufacturers of Connecticut will be offered for consideration. The Entertainment Committee consists of Austin H. Decatur, Boston; Ernest C. Howard, Whitman; and Elihu F. Turner, Boston.

The Executive Committee of the Wisconsin Retail Hardware Association held a meeting at Fond du Lac on Aug. 23d, at which the programme for the next annual meeting in February, 1901, was arranged. The committee also instructed the secretary, C. A. Peck, Berlin, through the medium of trade journals or by circular, to offer five prizes of $10, $8, $6, $4 and $2 to the Hardware traveling salesmen who should secure respectively the first, second, third, fourth and fifth largest lists of new members between September 1 and February 1 next. This step was taken wisely in view of the committee's firm belief that Hardware traveling men, from their close friendly relations with the retailer, can, if interested, present the matter of affiliation with the association to the trade at much less expense than in any other way. From all the reports presented the association was shown to be in a flourishing condition, and congratulations were expressed on the progress made thus far.

A law passed during the last session of the New York Legislature, and which went into effect on September 1, is worthy of close attention. The law provides that hereafter no person or persons shall carry on or transact business in the State under any assumed name or under any designation, name or style, corporate or otherwise, other than the real name of the individual or individuals carrying on such business; unless, after filing in the office of the clerk of the county where such business is carried on, a certificate setting forth the name under which the business is to be transacted and the true full name or names of the person or persons conducting the business, with his or their post office address. Persons now carrying on business under an assumed name, or under any designation other than the real name, are required to file a certificate such as is above described within 30 days after the Act takes effect, and any person failing to file such certificate is declared guilty of a misdemeanor. The object of the law is to prevent the use of assumed names or of corporate names where there is no real incorporation.

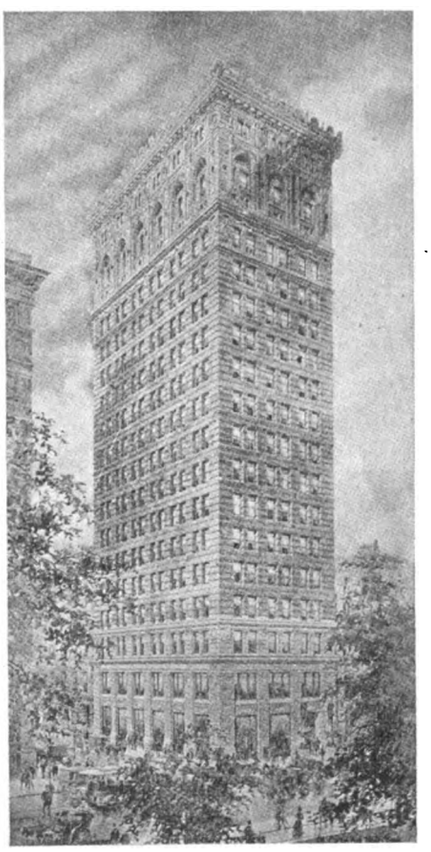
HARDWARE



VOL. XXI. SEPTEMBER 10, 1900. NO. 11.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 275 BROADWAY, NEW YORK.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President.
A. P. MITCHELL, - - - Secretary and Treasurer.
W. C. BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

The extremely hot weather with which September opens has retarded large orders for such goods as are demanded for Fall requirements, it being difficult for a buyer to think any hurry is essential in making up memoranda for snow shovels, ice chisels, skates, stoveboards, etc., goods suggestive of freezing weather, which just now seems at quite a distance, as the present weather has proved a warm proposition.

It is difficult to find a buyer who is not fully imbued with conservative views, regarding the trade and prices governing Hardware transactions for the next four months. Orders are given covering assortments ample enough, but invariably for quantities which indicate a belief that supplementary orders, if deemed advisable, can follow at a later date, and without any worriment as to fairly prompt shipments. For any fullness regarding special requirements that could possibly extend beyond January first, the manufacturers will have to wait until the season is over, and when the possible light trade, which a Presidential election frequently induces and encourages, has had its influence, and done its worst.

There seems to be less discussion prevailing of a political character, national rather than local, during the present campaign, the result being fairly anticipated, arising from the desire for a continuance of the same enjoyable state of affairs, with no wish to disrupt and antagonize present policies, while the labor of the country is fully employed at good wages, and while our crops are being disposed of at record rates that indicate increasing comforts, lessened indebtedness and growing savings bank deposits.

Builders' Hardware is meeting a steadily increasing demand, which will continue through next year, following readily upon the settled prosperity we are so proud to boast of. Our merchants and mechanics demand habitations in harmony with big wages and good profits, and houses are repaired or erected to meet these views, filled with comfort-creating appliances that emanate usually from the assortment filling the store of the Hardwareman and his co-workers.

In the large cities a number of small buildings are in course of erection, to satisfy a demand for buildings more moderate in their dimensions and suitable for fewer families. The strikes prevailing last Spring in several places, notably Chicago, did much to retard the growth of this class of investment. The changes now resulting make a forward movement desirable in this direction, and during this Fall great improvement along these lines will be noticeable.

Travelers are doing very well considering the weather acts as a drawback to some extent, as far as encouraging quantities are dwelt upon; the fluctuations in quotations are by no means as frequent as they were a month ago The inconsiderate buyer frequently shows a disappointment in not getting 15 per cent. concessions from manufacturers who only made 20 per cent. advances. The heavy Hardware trade did the best to keep pace with advances on the raw material during the boom, and it has had the discouraging role to play in leading off in the frequent reductions which an easier market on steel and iron naturally calls for.

The greatest encouragement given to the jobbers in their trade relations with their customers is the absence of the customary slowness in making settlements which was formerly characteristic of the unfavorable times. Now everybody seems to have money to burn, and cash discounts are availed of by many of the old-timers who didn't hesitate to take three months' time to decide on paying a "cash" bill.

The East is no longer called upon for money to move the crops; the West and South with markets to dispose of their crops nearer home, find all the cash necessary for the purpose quite near at hand, and other products than wheat, corn and cotton are actively employed under equally as promising influences.

Favorable reports are received as to a probable demand from the prosperous farmers and planters for more improved machinery and increased facilities for handling largely increased crops in many sections. With the addi-

Digitized by Google

tion of these labor-saving machines the farmer's ambition for an annually increasing crop area and a greater number of acres under cultivation, becomes possible. The anticipations are that the crops for the coming year will show more largely than ever before in so short a time, how willingly the farmer's profits are placed with the merchants in a demand for the latest improvements, and the expansion of our agricultural development through such intelligent actions; and the resultant profits will add greatly to our national wealth in sections especially where of old farm mortgage companies declared dividends based on the impoverishment of the agriculturist and the unprofitable nature of his products.

Business Morality.

The following extracts from an address by John R. Ainsley, delivered before the convention of the National Association of Credit Men in Milwaukee, have a right royal sound. Mr. Ainsley has given the subject proper consideration, and his language is full of food for suggestive thought. He said in part:

"Morality is the practice of the moral and social duties, and conformity to the standard of rectitude, honor, character and integrity. The laws of the land, originating in the wisdom of man, and brought into operation by business and social requirements, are designed to regulate human authority and conduct. Human laws are full of imperfections, necessitating almost constant revision, according to the times and influences; but moral laws are of higher origin and greater force, and in order to determine whether an action which we are about to do is right or wrong in view of morality, we should inquire of our reason or conscience.

"Webster defines a contract as an agreement between two or more persons, whereby, for a sufficient cause or consideration, each undertakes to perform, or to abstain from performing, some particular act. In other words, they promise to, and expect from, each other something in the accomplishment of which their contract or arrangement will be fulfilled.

"In business customs, this promise or agreement to exchange one value for another and to transact an honorable business is practically expected, and should be so understood and practiced by every firm and individual, whether buyer or seller, interested and engaged in the handling of merchandise, or in any business or profession. A merchant purchasing goods expects them to be free from imperfections, perfect in finish and correct as to size, weight or measure. The seller knows he expects this. He, therefore, is in honor bound, by recognized business principles, to furnish perfect goods, or to make known their defects. If he conceals the fact and does not explain that these conditions do not exist, but allows the customer to depart with a false impression, then he has morally neglected to consummate his part of the contract, and deserves the condemnation and contempt of every honorable business man.

"Some buyers find it difficult to resist the temptation to depreciate the value of the goods they desire to purchase, sometimes affirming that other merchants make lower prices, that the market is overstocked, and unless Mr. A. does as well by them as Mr. B., they will transfer their trade to the latter; while others proffer increased trade, provided they are taken care of in the way of bribes, presents, division of commissions and other unfair and unreasonable conditions. Often, after goods have been delivered, claims are made that prices are incorrect, the buyer, in many instances, succeeding in owning his purchase a little less, owing to the fear of the merchant selling the goods that expenses larger than the amount claimed would be incurred by having the goods returned.

"The temptation to shady transactions of every kind is far too prevalent, and the records of every nation illustrate the truth that no position, trade or profession is proof against the influence of temptation. Incompetent buyers are more than willing to palm off an inferior article for a better; adulterations, short measures, deceitful weights, false balances and similar practices are undoubted evidences of the unscrupulous rapacity and avaricious greediness for wealth. A statement was made by a party whose veracity is unquestioned that, just previous to the annual visit of the sealer of weights and measures, a firm, doing a large business in one of our large cities, would conceal the weights used in the regular course of trade, and produce for his inspection those which were correct and as required by the law."

Our Rapidly Expanding Commerce.

The exportation of manufactures continues to form the most striking feature of our rapidly expanding commerce. A year ago the record of a million dollars a day for every business day in the month was considered a phenomenal one; now a record of a million dollars a day for every day in the month, including Sundays and holidays, is the ordinary every month affair. Even in July, which is usually a dull month in exporting, the total exports of manufactures were $34,545,042, and formed over 35 per cent. of the total exports of the month, while for the seven months ending with July the total exports of manufactures were $268,309,189, forming 33.66 per cent. of the total exports during that period. In 1860 exports of manufactures formed 12 per cent. of the total exportations; in 1870, 15 per cent.; in 1880, 12 1-2 per cent.; in 1890, 17.8 per cent.; in 1895, 23 per cent.; in 1899, 28 per cent.; in the seven months of the calendar year 1900, 33.66 per cent., and in the month of July, 1900, 35.05 per cent. In 1860 the exports of manufactures averaged 3 1-2 millions per month, in 1870 they were a little over 5 millions per month, in 1880 they were less than 10 millions per month, in 1890 they were 12 1-2 millions per month, in 1899 they were 28 millions per month, and in the fiscal year 1900, 36 million dollars per month.

This rapid growth in the exportation of manufactures is particularly gratifying when compared with that of other nations which have heretofore chiefly supplied the world's markets in manufactured goods. In 1860 our total exports of manufactures were but $40,345,892; in that year those of the United Kingdom were $613,358,262; by 1870 our own exports of manufactures had increased to $68,279,764, and those of the United Kingdom were $900,168,224; in 1880 exports of manufactures from the United States were $102,858,015, and those from the United Kingdom were $970,681,400; in 1890 exports of manufactures from the United States were $151,102,376, and those from the United Kingdom were $1,089,155,787; in 1900 exports of manufactures from the United States had reached $432,284,366, while those from the United Kingdom in 1899, the latest available year, were practically the same as in 1890, being $1,092,563,072. Thus it will be seen that our exports of manufactures are now 10 times as much as in 1860, while those of the United Kingdom are but 1 1-2 times as much as in 1860.

The following table shows the exports of manufactures from the United States and the United Kingdom, respectively, in 1860, 1870, 1880, 1890 and 1900:

	Manufactures exported from— United States.		United Kingdom.	
Years.	Value.	Per cent. of total exports.	Value.	Per-cent. of total exports.
1860	40,345,892			
1870	68,279,764	31.54	7,092,563,072*	84.84*

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—Some time ago a customer ordered a certain quantity of goods to be sent by freight. The order was filled within four days after its receipt; it took ten days longer for the shipment to reach him. He accepted the goods and paid the freight, but returned one-half of the goods, claiming that they arrived too late for his purpose. Kindly inform us whether, in your opinion, first, we would be justified in claiming that we filled the order with proper diligence; second, should we have sent the goods by express instead of by freight, and, third, if he accepted any part of the goods should he not accept all.

REPLY.—Whether or not the delay of four days after the receipt of an order and before filling it is a reasonable time in which to comply with the order would be a question of fact to be determined by a jury. We are of the opinion that a delay of four days in filling an order is not an unreasonable delay. The further delay of ten days while the goods were in transit should not be considered, since the goods were sent by freight, according to instructions of the vendee, and the delay was caused through no fault of yours or your agent. The vendee specified the means of transit and he cannot complain that you did not use a quicker means of transportation than that indicated by him. If the vendee accepts the goods and pays the freight upon them, he cannot return a part of the shipment on the ground that it arrived too late for his purpose. The vendor has the right to regard the contract as an entirety, and as such to enforce payment of the full amount of the contract price.

QUESTION.—First: If an American couple while abroad have a child born to them, would that child be an American and entitled to vote when of age if the parents still claimed the United States as their residence? Second: Have they any law in Newport, R. I., which deprives a man of his vote unless he is worth a certain amount of money or is a property holder?

REPLY.—A child born abroad of American parents would be entitled to vote when he became of age, provided he complied with the requirements of the election law as to his residence before election. He is an American citizen, and is entitled to all the rights and privileges of a citizen born within the United States. Second: There are now no States in the Union which require the possession of property as a requisite for voting at a general election. Many States, however, have statutes imposing certain restrictions on local voting. Section 1 of Article 7 of the Rhode Island Constitution provides that "No person shall, at any time, be allowed to vote in the election of any city council of any city or upon any proposition to impose a tax or for the expenditure of money in any town or city unless he shall, within the year next preceding, have paid a tax assessed upon his property therein valued at at least $134." This restriction is purely local in its character, and would have nothing whatever to do with one's right to vote at a general election.

QUESTION: A short time ago a man came to my store and gave me a large order for a quantity of shovels and pitch forks, to be delivered at a future date. I had sold to this man before and believed him to be reliable. He has refused to accept the goods in question, and I have learned that he was slightly under 21 years of age when he made the contract. He looked like a man of about 25 years of age, and he told me on several occasions that he was over 21 years. Has this party a right to break this contract on account of his being under 21 years of age?

REPLY: All contracts by an infant, except a contract of marriage, are voidable by the infant at any time before he reaches his majority and for a reasonable time thereafter; that is to say, an infant may affirm or disaffirm a contract made by him during his infancy. The fact that he represented himself to be of age will not make him liable on his contract, although, if he had received the goods, he could be compelled to return them if he did not dispose of them. A state of facts then arises, where, if the goods had been purchased by an adult and were not paid for by him, the vendor would have two causes of action against him—one on the contract and another for the purchaser's wrongdoing or conversion of the goods in question or his misrepresentation. An infant is responsible for the torts and wrongs he may commit, although he is not responsible for the contracts he enters into. We are, however, of the opinion that the case you describe is a case where the tort of the infant is so merged and wrapped up in the contract that he would not be responsible to you for damages.

QUESTION: A certain party owes me $90, and has given me a note to secure its payment. The note is past due and has not been paid. Is it necessary for me to have a lawyer in order that I may get a judgment against my debtor?

REPLY: If an individual has sufficient knowledge of the practice of law, and is competent to draw the necessary pleadings in an action, there is no reason why he should employ a lawyer to perform these services for him, unless he desires to do so. It is, however, much wiser for a layman to place matters of this kind in the hands of a lawyer and and not to attempt such a matter himself. A lawyer having a cause of action of his own will often prefer to have another lawyer conduct the case, as one not a party to the action and not vitally interested is frequently able to accomplish much better results than the real party in interest. We would advise you to employ a lawyer, and are of the opinion that his services will cost you less than it will cost you to escape from difficulties which you are almost sure to fall into if you attempt the matter yourself.

QUESTION: I have carried on my business in the same store for two years. When I rented the store there was a verbal agreement with the agent that the rent would not be raised while I occupied the store. He now notifies me, four days before the end of the month, that my rent hereafter is to be five dollars more than I have been paying. I pay rent on the first of each month, and have hired the store by the month in this way for the last two years. Is it legal for the landlord to demand increased rent on such short notice?

REPLY: If you have hired the premises in fixed definite periods of one month each, your tenancy ceases at the end of each month and a new tenancy springs up at the end of each month. In this tenancy you or your landlord would have the right to terminate your relation as landlord and tenant on the last day of the month without any notice whatever. If, therefore, the landlord notifies you four days before the first of the month that thereafter you must pay more rent than you have been paying, if you desire to occupy his premises, you have the right to accept or refuse the new terms of rental. If, therefore, you wish to remain, the landlord's proposition being one which he had a right to make, you must pay the increased rent. If you had rented the premises for an indefinite period and paid rent monthly, the tenancy would have been one from month to month and you would have been entitled to thirty days' notice before your landlord would have the right to raise your rent or terminate your tenancy. If you think that this latter state of affairs is your case, and under the former, as we have understood it, we would advise you to consult a lawyer at once.

Jagway—Did you have a good time at that stag dinner the other night?

Toperly—The greatest time I ever had! Why, I can't remember a thing that happened.—*Ex.*

PARAGRAPHS FROM THE INDUSTRIAL FIELD.

There are now over 500 street railway corporations in Pennsylvania, where 80 years ago there were only about 60 The remarkable increase is due almost entirely to the adoption of electricity as a motive power for such roads.

The copper production increased from 535,900,232 pounds ($63,129,047) to 581,319,091 pounds ($100,916,994). The main increase was in Arizona. Montana showed a slight increase and Lake Superior fell off.

The pearl fishing industry of Western Australia is of considerable extent, many fine pearls being obtained every year. The average value of each pearl, several thousands of which are obtained annually, is about $5.

Horses and cattle are prevented from wasting their feed by a new feed box, which has its sides extended to the height of the animal's shoulders, with a slot in each side deep enough to allow the feed to be reached, the sides forcing the animal to hold its head over the box while eating.

The heaviest interest payers in July among the railroads were Chicago, Milwaukee & St. Paul, $3,345,887; Southern Railway $2,057,055; Chicago, Burlington & Quincy, $1,929,035; Union Pacific, $1,928,160; Baltimore & Ohio, $1,997,937; Pennsylvania Railroad, $1,546,659; Great Northern, $1,527,711, and Erie, $1,514,709.

The exports of electrical machinery for the eleven months ending May, 1898, amounted to $1,883,306, and for the same period of this year $3,834,317. The exports of electrical instruments and apparatus for the eleven months ending May, 1898, were $2,521,280, and for the same period this year $5,876,618.

The domestic production of gold in 1899 was 3,391,196 troy ounces ($70,096,021), against 3,148,642 troy ounces ($65,082,430) in 1898. The production of silver was 57,126,834 troy ounces ($34,036,168), against 56,755,032 troy ounces ($33,065,482). Besides the production reported, 1,423,349 ounces of gold and 40,542,858 ounces of silver were smelted in the United States from imported ores.

The total value at the place of production of the mineral and metal output of the United States in 1899 was $1,211,361,861, as against $861,751,017 in 1898. These amounts are quite unexampled in the history of the mineral industry. Of this vast sum ores and minerals contributed $580,836,062 in 1899 and $440,997,150 in 1898; metals, $496,057,320 in 1899 and $312,650,587 in 1898; secondary products, $63,996,969 in 1899 and $49,095,010 in 1898; while the value of metals smelted or refined from foreign material was $70,471,540 in 1899, and $59,008,000 in 1898.

The world's production of manganese ore in 1899 was 800,000 tons, of which 369,000 was supplied by Russia, 140,000 by Spain and Portugal, 77,000 by India, and the remainder by other countries of which Brazil is the head with 62,000 tons. Europe consumes about 600,000 and the United States 200,000 tons. The industry is assuming large proportions in Brazil of late. One property alone raised its exports from 1,430 tons in 1894 to 15,610 in 1898 and 28,400 in 1899, and another, commencing with 5,400 tons in 1897, exported 34,000 tons in 1899, during which year also other properties began exporting.

The total volume of circulation on August 1 amounted to $2,087,353,408. This represents an increase of over $156,200,000 as compared with the corresponding date a year ago. The circulation per capita is put by the Treasury experts on the basis of an estimated population of 77,956,000 on August 1 at $26.78. This represents an increase of 28 cents for the month and of $1.47 as compared with the corresponding date of last year. This is an immense gain, far outstripping the growth in population, as will be seen by any one who takes the trouble to make the comparison.

The total production of coal in the United States in 1899 was 252,115,387 short tons ($276,147,056), against 218,333,833 ($210,619,791) in 1898. The production of anthracite was 60,577,398 short tons ($103,648,780) in 1899, against 52,848,605 ($81,445,937) in 1898. Kentucky produced 36,639 short tons ($91,597) of cannel coal, against 49,889 ($134,700) in 1898. The remainder of the output each year was bituminous. The total production of coke in 1899 was 18,025,256 short tons ($42,081,002), against 15,938,556 ($31,109,680) in 1898.

Among the railroads the leaders at this time in size of dividends are Chicago & Northwestern, $1,565,355; New York Central, $1,437,500; New Haven, $1,066,172, and Lake Shore, $1,731,332. A good portion of the last sum, however, goes into the treasury of the New York Central Railroad. Among the industrials the heavy disbursements for dividends made by the copper mining companies are noticeable. Amalgamated Copper pays out $1,500,000; Calumet & Hecla, $1,000,000, and the Tamarack Mining Co., $420,000. The Western Union Telegraph Co. pays $1,216,759, and the American Telephone & Telegraph Co. continues dividends at the same rate paid for many years by the old Bell Co.

The New York Central Railroad is building 141 bridges at different points on the main line between New York and Buffalo, representing 32,000 tons of material and requiring the almost undivided attention of the whole engineering department. But this is not the only kind of improvement now being carried on by the road. There is now under way the construction of new car yards at De Witt, N. Y., which will have room for 3,000 cars. Besides this, every inch of track is being gone over for repairs. Every switch, signal tower, water tank, coal bunker, ash can, etc., along the line is being repaired or replaced, and on this work alone an unusual amount of money is being expended.

It is stated that although England was the birthplace of the Portland cement industry, she no longer has a monopoly of it. Her annual production is now between 7,000,000 and 8,000,000 barrels, that of France barely 3,500,000 barrels, and Germany's output from 18,000,000 to 20,000,000 barrels. Moreover, the quality of the German product is so excellent, and its makers have urged its merits on the attention of American engineers so vigorously, that large quantities of the article have been imported to this country. In 1883 the consumption was about 500,000 barrels, and nearly that amount was imported. In 1891 Americans consumed nearly 3,500,000 barrels and produced less than 500,000 barrels, or about one-seventh of the consumption. Three or four years later, however, the American industry spurted. By 1897 our production exceeded our importation, the former nearly amounting to 3,000,000 barrels and the latter falling to the vicinity of 2,000,000 barrels. Last year the United States produced 5,200,000 barrels and imported 2,300,000 barrels.

Ruberoid and the Chinese.

No matter in what part of the world any important move is made, a little observation generally discloses the eloquent fact that Americans, or, to be more exact, American products, are taking an active part therein. Our manufactures are, in a surprisingly rapid manner, sailing "broadside on" against foreign competition—the quality of the American goods usually winning the battle.

As interesting evidence of the part taken by American products in international affairs comes the news from Germany that the big barracks being erected for the shelter of the German troops sent to join the allied armies in the movement against the Chinese are being constructed in a manner most complimentary to at least one of our home industries.

After careful investigation of the subject of a proper roofing for the many big buildings in which the Germans are quartered, P. & B. Ruberoid Roofing was selected—the tests of the various roofings having resulted overwhelmingly in favor of P. & B. This news should be very gratifying to the manufacturers, The Standard Paint Co., headquarters in New York, a progressive concern which has made the trade mark "P. & B." known all over the world.

Like the famous P. & B. Insulating Papers made by this company, P. & B. Ruberoid Roofing is claimed to be proof against weather, water, heat, steam, acids, alkalies, gases, etc. The makers say that, containing no tar, it will not melt and run, and, having no paper in its construction, it does not absorb moisture and rot away.

The German troops should rest comfortably and coolly in their Ruberoid-covered quarters.

Paper Rope.

Paper rope is manufactured by the Ironmongers' Rope Works, Limited, at Wolverhampton, England, and is highly recommended for power transmission. As the same company manufactures cotton rope with which the paper rope competes, this recommendation carries considerable weight with it. Paper rope is of a light fawn color, fairly smooth to the touch, slightly lighter than cotton rope, and is very pliable even to 1 1-2 inch diameter. These ropes are manufactured similar to other ropes, and are made up of three strands each, each strand being made up of a number of smaller strands. The rope is treated with boiled oil, making it practically waterproof. Its tensile strength is not as great as that of cotton rope, but it is said not to wear internally as do these other ropes. The rope can be spliced like any other rope, though the makers are introducing a metal coupling to do away with splicing, and this is said to both make a better connection for power transmission work, and also to effect a great saving in time as compared with splicing.

Experiments recently conducted to find out the driving power of ropes made of different material were carried on. A single grooved pulley of approximately 24 inches in diameter fixed on a horizontal shaft revolving at a rate of 54 revolutions per minute was used, and ropes of different material were placed in the pulley groove. One end was attached to a spring balance fastened to the floor, and on the other end weights of varying sizes were hung. The results obtained were as follows:

Rope.	Pull with 7 pounds.	Pull with 14 pounds.	Pull with 28 pounds.
1-in. manila	34 pounds.	84 pounds.	126 pounds.
1-in. white cotton, prepared.	45 pounds.	80 pounds.	135 pounds.
1-in. paper	63 pounds.	105 pounds.	189 pounds.

In all cases the pull had a tendency to decrease when the experiment had been proceeding for a minute or so. With the paper rope this was less marked than with others, and a point was soon reached when the pull remained, as nearly as could be told, constant. There was a slight vibration of the spring gauge pointer, which made readings to a pound difficult. The ropes were examined after the test. The cotton and hemp showed signs of fraying; the paper was simply polished. If similar results can be obtained in practical work there seems to be a field for this new rope.—*Science and Art of Mining.*

Graphite for Automobiles.

Graphite, which plays an important part in the mechanical arts of the world, is found very useful in reducing friction in automobiles.

A very finely powdered graphite when introduced into the cylinders of either steam or gas automobiles very largely assists the oil which is usually employed for the purpose of lubrication.

It seems to be agreed by all engineers that no vegetable or animal oil should be used for the lubrication of engine cylinders. Mineral oil only should be used, but even the best mineral oil in the cylinders of gas engines chars under very high heat, due to the combustion of gases. The heat in a gas engine cylinder is said to be from 1200 to 2000 degrees F., and graphite only is able to bear this extreme heat.

Special graphite lubricants are prepared for the gears of both electric, steam and gas motors. For the driving chains on steam or gas automobiles, graphite in some form should always be used, as it saves power and at the same time so thoroughly lubricates the links that it will prevent the chains from breaking.

When used for the chain, the graphite should not be used with any grease, as the sticky grease causes the dust and dirt to adhere to the chain, thereby practically shortening the chain and making it unnecessarily tight. The graphite should be used with a nice quality of vaseline or should be mixed with gasoline or turpentine, and applied to the chain. The gasoline or turpentine will evaporate, leaving a thin coating of graphite on the chain.

Those interested in the subject of graphite lubrication should write to the Joseph Dixon Crucible Company, Jersey City, N. J., who are authorities on the subject of graphite.

Advertising in Pompeii.

An interesting discovery at Pompeii has just been reported. In the course of recent excavations an advertisement pillar—"much resembling the pillars used for a similar purpose in Berlin at the present day"—has been brought to light. It was covered over with advertisement bills, one over another, forming a layer a little less than half an inch thick. They are stuck together with gum arabic—not paste, which we are told had not then been "invented" or "discovered," whichever may be the proper term. It really requires an effort to realize the fact that the people of Pompeii were actually without paper and paste; that they were obliged to write out their posters on papyrus instead of printing them on paper, and that the bill-sticker carried a gum bottle instead of a paste pot. The different layers on the pillar were, it appears, separable, and we learn that the announcements consisted of theatrical programmes and programmes of the arena, proclamations for the forthcoming senatorial elections, notices of tribal gatherings, festivities, etc. We confess to some disappointment that there were no tradesmen's advertisements among the bills. It would be interesting if we had a number of the business puffs of the period; what the storekeepers and the sandal makers had to say about bargains; what were the prices of fine Egyptian linen, warranted best quality; what the perfumers had in stock and the rates for the choicest perfumes—are such announcements yet to come to light, or did the Pompeiian storekeeper in the first century B. C. get a living without advertising?—*Dry Goods Chronicle, New York.*

The Penal Code of the Chinese Empire is at least 2,000 years old, and under its provisions about 12,000 persons are annually executed.

THE TENDERFOOT.

"He's got grit 'nough," said Shorty Sam decisively. "What he lacks is judgment. He's like Hawkins' brindle pup that-a-way."

"How's that?" inquired Brooks. "Howd'y mean?"

"Never hearn tell of that?" Shorty Sam asked in surprise. "I s'posed everybody knew 'bout Hawkins' brindle pup. It's like this: Old man Hawkins had a bull pup—a savage lookin' cuss, which you wouldn't nacherly git f'miliar with. Waal, spite of his ugly looks and his ferocious temper, he was always comin' home all chawed up. One day Pete Tucker, who lived 'long side of old man Hawkins, happened to be standin' out'n front of his house when that dog come limpin' home, all chawed up as usual. Old man Hawkins was out'n front, too. Sez Pete to the old man:

"'That dog of yourn don't seem to be much of a fighter,' sez he. 'He's always gettin' licked,' sez he.

"'Don't you gamble almighty hard that-away,' sez Hawkins, ''cause if you do you'll lose your wad. That air pup's one of the derndest fighters y' ever see,' sez he. 'Yessir,' sez he, 'he's a great fighter, but h's a d—n poor judge of dogs.'

"That's the way it is with the Tenderfoot. He's too all-fired reckless, an' ain't got no judgment t' speak of back of it all. He'll find himself missin' some o' these days. The boys have all been stringin' him with no end of stuff, an' he believes most of it, thought I must say he ain't quite 's big a fool's most of 'em what comes out yere."

"What makes y' think he's gritty?" asked one of the party. "He ain't done nothin', has he?"

"Nothin' 'cept shoot at a mark," Brooks volunteered. "He's purty good at a mark. I'd like to see what he'd do 'gainst a grizzly."

"I know he's got the right sort of stuff in his makeup," said Shorty Sam, "by the way he stuck to that buckin' hoss after he'd been bucked off more'n fifty times."

"He's like the rest of 'em, though," said Brooks. "He's got some new-fangled city thing that he's been tryin' to spring on us in the way of ammunition. This time it's a kind of powder that won't smoke and won't do a lot of other things ordinary powder will do, an' I reck'n shootin' is one of them last."

"Where's he gone to-day?" Shorty Sam inquired.

"Huntin'," said Brooks with a laugh. "Up the canon after bar, I reck'n."

Everybody joined in the laugh this remark called forth.

"Speakin' of the devil," one of the men exclaimed, "here comes the Tenderfoot now."

"Evidently somethin's happened," said Shorty Sam. "He seems in a hurry."

The Tenderfoot was urging on his piebald pony and coming at a hard gallop. He drew rein in front of the party. It was easy to see that he was greatly excited about something.

"What is it, son?" Shorty Sam inquired, "bear or Injuns?"

"Bears," the Tenderfoot announced. "Two of them; big grizzlies at that. I saw them."

"Why didn't you shoot 'em?" asked Brooks.

"For two reasons," he replied. "First, because my pony got the wind of them and bolted, and second because I didn't care to tackle the two of them alone. Who'll go back after them with me?"

"You'd better go 'long, Shorty," said Brooks, with a wink. "You're the best shot, next to the shorthorn yere."

"All right," said Shorty Sam, and added gravely: "But as this yere seems to be a solemn occasion, an' as we may not git back with our skelps entire, I move we adjourn to the Shining Light an' make ourselves feel more resigned at the expense of the Tenderfoot."

"The motion's carried," said Brooks, and they proceeded to carry the same into effect.

"An' to think," said Shorty Sam in an aside to Brooks, "there ain't been a grizzly seen in the canon in the Lord knows how long. Won't I have a story for you when I git back!"

And so he did.

* * * * * *

"Hope y' have plenty of that smokeless powder 'long, son," said Shorty Sam, as they carefully wended their way up the canon. "Grizzlies are great on spottin' smoke from a rifle. Whoa! you blamed fool, you! What in blue blazes are you up to?" The latter part of his remark was addressed to his horse, which had suddenly stopped abruptly with a snort of fear.

The Tenderfoot, who was riding a little in the rear, quickly dismounted.

Shorty Sam was swearing softly but diligently at his pony and trying in vain to urge him forward.

"It's no use!" he finally exclaimed. "The infernal fool's got the devil in him when his mind's made up. Wonder what's wrong?"

"They smell the bears, I suppose," the Tenderfoot volunteered.

"To be sure," said Shorty Sam, "I come near forgettin' the bars," and he chuckled within himself at the prospect of the fun he was about to have with the Tenderfoot.

"I'll take the right hand side and you take the other," said the Tenderfoot when they had tethered their ponies and started forward with their rifles over their arms ready for business.

"Suit yourself," said his companion. "When you see a bar, just let me know."

They separated and made their way cautiously along the rough rock-strewn bed of the canon. Suddenly Shorty Sam brought his six feet three inches to a sudden halt, and with an exclamation used to express any sudden emotion, dropped behind a big rock. He looked about for the Tenderfoot, but the latter was nowhere to be seen.

"Vamoosed, I'll bet a stack of blues against a potato chip!" he exclaimed in disgusted tones.

The cause of his surprise was not far distant in the shape of a big grizzly. The bear was rooting around among the rocks, unconscious of the presence of an enemy. For some reason it had strayed away from its native haunts and had wandered into a region where a bear was seldom seen. Hence Shorty Sam's astonishment. But that gentleman wasted no time in speculation. He crept from cover to cover, working up the side of the canon, until he got within shot of the animal.

The position he had chosen furnished rather precarious footing, but he gave the matter no thought. He raised his rifle, aimed carefully and fired.

The bear whirled about with a roar of pain and rage. Again the rifle cracked and a thin bluish cloud of smoke marked the spot from whence the shot had come, and the bear charged blindly toward it.

Shorty Sam was about to fire again, when he heard a savage growl behind him that caused him to whirl around suddenly, and there, not more than a hundred feet away, was another grizzly bigger than the first one.

He involuntarily started back, and in so doing slipped and fell, and his rifle flew from his grasp, and as he fell the

Digitized by Google

thought flashed through his brain that it was "all off" so far as he was concerned. But in the same moment he heard the crack of another rifle, and he raised himself in time to see bear number two pitch forward and then recover himself and glare about in search of this new enemy. But there was no telltale smoke to mark the spot where the enemy lay concealed, and before the bear could make up his mind just what to do besides growl, two more shots in quick succession settled all his earthly troubles for him.

Shorty Sam went to reach for his rifle, but discovered that his arm hung limp and useless at his side. Bear number one was clambering over the rocks not more than fifty feet away, and making the canon echo with its savage growls. It was weak from loss of blood, but had strength enough to make things interesting for the disabled man, who had been bold enough to attack it.

At that moment, however, a man leaped out from behind a pile of rocks on the other side of the canon, and came running toward the bear, shouting like mad and making more noise than the bear itself. The bear paused, undecided, and that was the man's chance. He raised his rifle and fired, and continued to "pump lead" at the bear and into the bear until the savage beast had ceased moving.

The man gave a whoop of triumph, which was answered by Shorty Sam, and then the latter opened his eyes wide in amazement.

"The Tenderfoot, or I'm a Greaser!" he cried. "Why, man alive, where'd you come from? I thought you'd vamoosed."

"Well, I like that!" the Tenderfoot angrily retorted. "What do you take me for, anyway?"

"I ain't got nuthin' more to say," said the other, sheepishly, "'cept to ask your forgiveness, which I do right now. I owe you my life. 'Taint worth much to anybody 'cept myself, but you're welcome to it."

"That's all right, old man," the Tenderfoot interrupted. "But you owe your life to L. & R. Smokeless and not to me. That's what did the business."

* * * * * *

"An' I want to say right yere," said Shorty Sam as he concluded a vivid narration of the events of the day at the Shining Light that night, "I want to say right yere that any man as wants to call the Tenderfoot a tenderfoot in my presence, or speak disparaging about that powder he uses—it's called L. & R. Smokeless—that man can prepare himself for an interesting time with me, sure as shootin'! Barkeep, git busy with the bottles, the drinks 're on mé." "FAYETTE."

Two Gold Medals for E. C. Atkins & Co.

In the official list of awards to American exhibitors at the Paris Exposition which were made public on Aug. 17 we note that two Gold Medals out of four hundred and eighty-six awards, were given to Messrs. E. C. Atkins & Co., the well known Saw Manufacturers of Indianapolis, Ind.

One of these awards was in Group IV., Department of Machinery, including all kinds of Saws operated by machinery, the other being in Group XI., containing their Hardware Exhibit of Hand Saws, Cross-Cut Saws, Wood Saws, etc.

That the superior qualities of their Saws, which have been so well established in the United States for many years, are thus recognized by the highest prizes awarded in the great world's Exposition of 1900, must be a source of gratification to the company.

This success, coming as it does immediately after the victory of the Atkins Saws in the recent International Sawing Contest in Australia, will have the effect of more firmly establishing the reputation of this brand in the markets of the world.

♣

It cost $1,500,000 per mile to build the underground railways of London.

Razor Strops.

Razor strops are made in hundreds of varieties, counting kinds, qualities, materials, sizes, styles and manner of finish. They are produced in this country to the number of millions annually, and American razor strops are exported to all parts of the world.

The very best of the swing strops now so extensively used are made of Russian leather. Strops of this kind, with the very simplest sort of mountings at one end to hang the strop up by and at the other end to hold it by, cost from $1 to $2 each. Strops of imitation Russian leather are sold as cheaply as 50 cents. Fine Russian leather swing strops with silver mountings range in price from $5 to $25 each.

After those of Russian leather the best swing razor strops are made of horsehide, of which, in fact, a very large proportion of all swing strops are made. Horsehide strops are produced in great variety, genuine horsehide strops being sold at from 25 cents to $1.25 each. Imitation horsehide strops, made of cowhide, are sold at various prices, from 10 cents to 75 cents each. Swing razor strops are made also of calfskin and of porpoise leather.

Perhaps 5 per cent. of the swing strops sold consist of the leather alone, but the great majority of them, of whatever kind, grade or quality, consist of two parts, the leather strop and a strop of corresponding dimensions of cotton or linen. On cheap strops this part is of cotton; on the best strops of whatever kind it is of the best Irish linen, woven in the form of a hose and then flattened into strop form.

There is a swing strop that is reversible. If the face of the leather is cut in use the strop attachments are such that the leather can readily be turned. There is also a swing strop that rolls up like a window shade into the attachment from which it swings on the wall.

Hand strops, the familiar two-sided and four-sided strops, with a handle at one end, are made in very great variety, including, for example, traveling strops, one sort of which, small in size, has a handle that unscrews and can be dropped inside a place made to receive it in the strop.

Besides the hand strops of solid construction with two or four sides there are hand strops whose sides are composed of leather straps drawn at either end over a supporting framework, which can be tightened by turning up on the handles.

Hand strops are sold at various prices, ranging from 15 cents to $4 each; silver mounted hand strops run up to $25 each.

By no means every man that shaves himself and has a razor strop of some sort has also a razor hone, or stone; as a matter of fact, not one man in a hundred, perhaps not one in a thousand, has one. There are men that hone their own razors, using, perhaps, a stone that came down to them from their father, or it might be from their grandfather. And stones can be bought, if one wants them that way, in a silver box. But as a rule when a man's razors need honing he is more than likely to take them to the barber's; so that the razor stone is virtually a professional implement, used almost exclusively by the barbers.

Of razor stones there are two general kinds, almost all of which, of both kinds, are imported, the water stones, as they are called, because they are used with water, from Germany, and the oil stones, used with oil, and called Belgian oil stones, from Belgium. Some barbers use one and some the other, and some use both. Of course the razor stone is a very important part of the barber's kit of tools, and he values a good stone highly. And a good razor stone is rather a costly thing.

German water stones cost from 25 cents to $2 each, and Belgian oil stones, according to the grit and quality, from 75 cents to $5 each, these prices being for stones from six to fifteen inches in length, eight inch and ten inch being the sizes most commonly used.

New Uses of Aluminum.

Ten years ago one heard little about aluminum. It has been known as a solid metal for almost fifty years, but its cost had barred it from general use. In 1885 two and one-half tons of aluminum represented the world's yearly output of the metal. To-day the United States is producing approximately 20,000 pounds daily.

Improvements in the process of production account for this astonishing change in conditions, and for the fact that within ten years the price of aluminum has fallen from $5 a pound to about 33 cents. The details of the process are protected by patent, and some of them are not given to the outside public, but the general features are well known and easily understood, the most important being a process of pure electrolysis, which separates the aluminum from the gas oxygen and the metal is put into the form of sheets, wire, or tubing for the market. Until within two years it was practically impossible to purify the metal to a degree higher than 98 per cent., and the 2 per cent. of impurity has caused deterioration in the metal and interfered with its utility. Now that difficulty has been overcome and aluminum is from 99 1-2 to 99 2-3 per cent. pure. Another improvement has been in the manufacture of light and strong alloys. Aluminum, like copper, is rather a weak metal, but with 5 per cent. of copper, nickel or manganese it is as strong as bronze, while only one-third as heavy.

Its light weight is, of course, the great advantage of aluminum in its competition with copper, bronze, brass, etc., and the rapidity with which the sphere of the comparatively new metal is broadening threatens the supremacy of all common metals save iron and steel. Copper especially feels the rivalry, for the most astonishing feature of the development of aluminum is its tendency to replace copper as an electrical conductor. Ten large power transmission plants and twenty-five electric railway and electric light plants are now equipped with aluminum conductors, and the indications are that this one use will consume thousands of tons of the metal each year. The most extensive experiment yet undertaken with aluminum as an electrical conductor is going on in California. Between Sacramento and San Francisco three wires 150 miles long are in use, the power transmission plant sending currents of 60,000 volts—the highest voltage yet attempted in any transmission plant. In all, 1,500,000 pounds of aluminum have been put into this one plant.

The Pennsylvania and several Western railways are experimenting with aluminum telegraph lines and waiting with interest to see how the metal will stand severe sleet storms and other Winter tests.

In foreign countries aluminum is being used extensively in army equipments, Germany and Russia being especially interested in the experiments.

The Japanese are possibly using more aluminum to-day than any other foreign nation, for they are employing it to a large extent in their shipbuilding; and it is rather a surprising fact that India supplies a great market for the metal.

German metallurgists long ago discovered the cheering fact that aluminum was non-poisonous in corrosion, and one of the largest uses of the metal at present is in the manufacture of covers for fruit jars, where its chemical harmlessness makes it preferable to zinc and tin, and the various manufacturers find it impossible to supply the demand for these jar tops.

Another new use for the metal has been found in the lithographing business. In the past few years lithographic stone has been to some extent supplanted by metal plates of one kind or another. The Germans introduced the first aluminum plates not more than two or three years ago, but since that time between thirty and forty firms in the United States have taken up aluminum plate printing, and much of the finest color printing is done from aluminum plates. This industry bids fair to grow because of the comparatively limited supply of good lithographic stone.

A memorial has been sent to Congress requesting the withdrawal of copper cents from circulation, and the substitution of aluminum coins. The mint officials and health authorities have for a long time contended that copper coins should be abolished on account of their accumulation of verdigris and ready transmission of disease germs. From time to time Congressional action on the matter has seemed probable, and at the Philadelphia Mint experiments in the coinage of aluminum cents have been made with satisfactory results; but as yet Congress has taken no definite action in regard to the matter.

The number of fancy articles made of aluminum is legion, but such use of the metal is the smallest of side issues, and it is in the fields of electricity, military and marine construction and equipment, and machinery casting that the aggressive metal promises great things.—*N. Y. Sun.*

Southern Hardware Jobbers' Association.

The standing committees of the Southern Hardware Jobbers' Association have been recently appointed as follows:

TRANSPORTATION COMMITTEE.

W. E. Newill, King Hardware Co., Atlanta, Ga.
John Donnan, W. S. Donnan & Co., Richmond, Va.
W. H. Kettig, Milner & Kettig Co., Birmingham, Ala.

MANUFACTURERS' COMMITTEE.

C. H. Ireland, Odell Hardware Co., Greensboro, N. C.
B. F. Eshleman, Stauffer, Eshleman & Co., New Orleans, La.
A. B. Palmer, Palmer Hardware Co., Savannah, Ga.

GRIEVANCE COMMITTEE.

B. F. Atkinson, Atkinson Hardware Co., Ft. Smith, Ark.
R. C. Carson, Charlotte Hardware Co., Charlotte, N. C.
P. G. Wall, Knight & Wall Co., Tampa, Fla.

PRESS COMMITTEE.

F. P. May, F. P. May & Co., Washington, D. C.
Thos. W. Fritts, Tom Fritts Hardware Co., Chattanooga, Tenn.
J. C. Sproull, Anniston Hardware Co., Anniston, Ala.

MEMBERSHIP COMMITTEE.

Joseph Orgill, Orgill Brothers & Co., Memphis, Tenn.
R. E. Bell, R. E. Bell Hardware Co., Weatherford, Texas.
H. G. Lipscomb, H. G. Lipscomb & Co., Nashville, Tenn.
J. J. Mandlebaum, Fones Bros. Hardware Co., Little Rock, Ark.
W. A. Pleasants, W. A. Pleasants Hardware Co., Shreveport, La.

Electric Ventilating Fans.

In the hot days of Summer we realize most vividly how much we are dependent on the movement of the air to secure our comfort. It is not enough, however, to merely agitate the air with a fan, but in most cases we are distinctly dependent upon a change in the atmosphere within the room, which can only be secured by forcing in the air or by withdrawing it by positive means and permitting a fresh supply to enter to make good the loss. For the purpose of securing this result nothing has yet been invented equal to the electric ventilating fan. It may be attached to an opening in the wall and arranged to force into or draw directly from the room, or it may be connected to a system of air ducts through which movement is maintained. These electric fans are built in sizes ranging from 18 inches to 120 inches in diameter, driven by motors ranging from 1-6 horse power to 14 horse power, according to size and handling from 2,000 cubic feet per minute, in the smallest plant, up to 175,000 in the largest.

Two hundred and fifty of the Paris police are mounted on bicycles. They carry a saber on the handle in the daytime and a revolver at night.

Old Cutlery.

In a Sheffield (Eng.) newspaper, R. E. Leader reviews the development of the Hardware manufacturing industries of that city, in which he says:

The first improvement on the whittle was the jack knife, a rude device for shutting the blade in the haft. The blade moved on a pin. When opened it was kept in position for cutting by a catch which rested on the back of the scales.

We are, unfortunately, largely in the dark as to the date of the introduction of spring knives. Their inventor is one of those unknown benefactors whose name is omitted from the rolls of fame. It has been suggested that as they were originally called couteaux—a name found in use down to a late period—the device came from France. At first they were rough and large, of course, with only one blade. "Flatbacks" followed one-blade spring knives. Instead of the blade and the spring being got up before the knife is "nailed in," or riveted together, as is the case with "round backs," the flat back was made up entire and then ground, the scales, springs and covering all being ground flat at one operation and the blade at another. After this many varieties were introduced, the technicalities of which it would be tedious to recount.

An immense stride in perfecting scissors was taken in 1761, when one Robert Hinchliffe produced the first pair of cast steel, hardened and polished. The story is that love stimulated his inventive genius, and that his efforts were inspired by desire to win the affections of a young woman whom he wished to take for wife. The forming of the bows was his greatest difficulty. His first method was to make them solid; then drilling a hole, he enlarged this to the required size by laboriously filing away the metal. Afterwards he hit upon a simpler plan and a ready sale was found for his wares in London and other markets. He lived in Cheney Square, and was reputed to be the first person who put out a signboard proclaiming himself "fine scissor manufacturer."

The increasing luxury of the people had created a demand for forks; edge-tools and joiners' tools had also made their appearance among the traders of the town. With the multiplication of the cutlers had grown the demand for the fittings of their shops and thus the manufacture of anvils, vises and hammers had taken the position of recognized trades. In 1774, "lancet and phlem makers" were a distinct class—and the manufacturer of surgical implements implies both excellence of material and skill in workmanship and finish.

So from 1700 to 1800 the industries of the town continued to increase and multiply, in general slowly, but occasionally with strides which form landmarks in the history of Hardware manufactures. The period is illuminated by the brilliance of two notable discoveries made nearly at the same time, towards the middle of the century, by Sheffield men. The discovery of the art of silver-plating, by Thomas Bolsover, and of making cast steel by Benjamin Huntsman, was destined to have immense effect upon the growth of the town. The value of the latter, at least, was not all at once apprehended. The wise men of Sheffield obstinately refused to use Huntsman's steel. They complained that it was much harder than anything to which they had been accustomed. But Huntsman found the French more appreciative, and the superiority the foreigners began to attain thereby raised a competition which forced the Sheffield cutlers to adopt cast steel.

An illustration of the value of the steel rolling mill may be found in the change it effected in the saw trade. Formerly the steel for each saw was hammered out of the bar, but this tedious labor being superseded by the new process, it became possible quickly to roll sheets of the required thickness, which had then simply to be cut into the necessary sizes. And instead of the antiquated plan of making saws thicker at the tooth edge than in the blade—so that in working they might clear themselves, "gait" was given by the simple but ingenious device of setting the teeth inward and outward alternately.

A Celebrated Iron Mine.

In the history of mining in the United States, says an exchange, there is nothing more remarkable than the record of the Minnesota mine at Tower. Discovered in 1867, but not shipping until 1884, it is the oldest mine in the State, and was for three years the only producer. Its total production of iron ore up to the beginning of the present year, amounting to 6,189,031 gross tons, exceeds that of any other single mine in the country. There are groups of mines under one name and one management whose output has exceeded this, but no one property has equaled the Minnesota. Not less remarkable than the amount has been the uniform high quality of the ore. The average percentage of metallic iron in the entire 6,000,000 tons was 67, largely within the Bessemer limit as to phosphorus. The other mines of the Minnesota Mining Co., the Chandler and the Fayal, besides several Wisconsin and Michigan properties, now have a greater annual production, but in none is the rapid progress of mining methods in the past few years better exemplified. The discoverer of the Minnesota found the ore bodies outcropping on top of a high hill on the shore of Lake Vermillion, and the first mining was by open cuts and simple quarrying. This answered for a time, and the hill was honeycombed with immense trenches, but after going down several hundred feet the danger of caving in the high vertical walls, unsupported by timbering, and the expense of hoisting waste matter to the surface, compelled a change. Shafts were sunk in the country rock alongside these cuts and then drifts run beneath into the ore bodies. As first mined, the ore comes out in huge chunks of nearly the hardness of steel, expensive to handle, both at the mine and during transit to the furnace, and requires more fuel to smelt than ore in moderate-sized pieces. Huge crushers were erected near the shafthouses and the ore trammed directly to them. Ponderous iron jaws, weighing 10 tons each, crush it to pieces that will pass a 4-inch aperture, after which it is dumped on the stock piles. Prevous to this, during the shipping season, it took several hundred men, using shovel and barrow, to load the ore into cars. One immense steam shovel, with six or eight men, now does the same work, making a record in keeping with the improvements elsewhere about the mine. Its dipper holds 3 1-2 tons, and when working steadily fills a 25-ton car in two minutes. Recently it loaded from last Winter's stock pile 192 cars in a day of fourteen hours, approximately 4,800 gross tons, a feat never before accomplished. Another improvement which greatly reduced the cost of mining was the substitution of machine drills, driven by compressed air, for the hammer and drill in the hands of the old-timer. In 1889 1,500 men were employed in the mine, and the average amount of ore per man produced daily was 1.1 tons, at a cost varying from $1.40 to $1.50 per ton. At the present time 600 men are employed and get out nearly the same amount of ore as ten years ago, with a daily average of more than two tons per man, and at a cost of less than $1 a ton.

"Handy Book for Trap Shooters and Sportsmen."

This handsome little book contains "up to date" Game Laws of the different States, Territories and the British possessions; also the Trap Shooting Rules, Live Bird Rules, Rifle and Pistol Rules and a great deal of information in regard to matters of interest to all classes of sportsmen. Besides, there is interesting information concerning the product of The King Powder Co., King's Smokeless, Semi-Smokeless and Quick Shot Powder, also of the long line of loaded shells and metallic ammunition that has made the Peters Cartridge Co. famous.

This booklet will be sent to any address upon application to The King Powder Co. or The Peters Cartridge Co., of Cincinnati, Ohio, or to T. H. Keller, 80 Chambers Street, New York City, who is the Eastern Agent of both these companies.

TRIUMPH OF THOMAS COLDWELL.

THE EFFORTS OF A CELEBRATED INVENTOR CROWNED WITH SUCCESS.

In the great factory of the Coldwells, in Newburgh, N. Y., recently occurred a unique celebration. The immense room in a new building, just erected, was turned into a banquet hall, and, amid the splendor of decoration, music and brilliancy, the entire staff of employees of the Coldwell Lawn Mower Co., together with their wives and sweethearts, sat down to a dinner given by the company in appreciation of the services of their men during a season marked by such unusual success that the large building had to be erected to accommodate the double demand for the Coldwell machines. It was an inspiring sight to see Thomas Coldwell, the father of the American Lawn Mower and the inventor, by whose tireless zeal this success was made possible, standing at the head of this company as its president and addressing the employees, sharing with them the honors he had achieved and proud to witness with them the completion of a plant that now makes the Coldwell Co. the largest manufacturer of lawn mowers in the world.

The new building occupies an area seventy-five by one hundred and thirty-five feet. It is two stories high and furnished with every modern appointment, not only to meet the vast increase in manufacture, but with every convenience for the comfort of the workmen. On the second floor a club room has been arranged, with library and periodical literature. In this room meals will be served during stormy weather. The interest taken in the life of the men is one of the very reasons for the unexampled prosperity of the Coldwell works. The workmen are recognized in every way that will strengthen their regard for their employers and stimulate their zeal in turning out the very best work. They take pride in the factory, because they share in the success of the company. Harmony is the Coldwell motto, and harmony prevails throughout the entire plant. The system and order is so perfect that in all the multiplied and complex economy of the works not a single scrap of steel nor a screw is out of place. Everything is in its proper position, catalogued and numbered like a well conducted library. You can tell the stock on hand at once. The entire arrangement is up to date and the manufactory throughout is as clean as the kitchen of the Waldorf-Astoria. The most exact method is maintained, so that when a machine is put together it is put up right and runs without friction. Mr. Coldwell has always held that the very best work was the only profitable work, and nothing leaves the factory that is not guaranteed. If a machine is not perfectly satisfactory in every way the company want it returned to the factory, not to be tinkered with, but to be replaced by one entirely new. Business conducted upon these broad principles is bound to succeed.

The recent additions to the plant are necessary to meet the double demand for Coldwell lawn mowers. The capacity had to be multiplied so as to turn out 300 mowing machines every twenty-four hours. Now what becomes of this large product? Well, they are used throughout the entire system of public parks in Greater New York; in the parks of Chicago; in general use in the parks of Buffalo, the East Coast and the Plant systems of Florida; the Capitol grounds, Washington; in fact, in all the principal parks in the principal cities of America. They are used by over 400 golf clubs in this country. They are used by the Goulds, Morgans, Rockefellers, Vanderbilts, Astors, and on thousands of beautiful country places, country clubs, by well known and representative people everywhere. You will find them at Newport, Lakewood, Morristown, Lenox, Saratoga, Tuxedo and on the private estates that beautify the banks of the Hudson River; on Long Island from Oyster Bay to Easthampton, wherever landscape gardening has become an art and wherever lawns are luxuries. You will find them used on the lawns of every important university or college in the United States— at Harvard, at Yale, at Princeton, at the United States Military Academy, West Point, the University of Pennsylvania, Stanford University, Williams College and at all the institutions of learning wherever the very best is found in culture, where art abounds and beauty enraptures. It is a part of the progress of the age and a sign of success to find the best families as well as the very best institutions with clean-cut, level lawns, soft as plush and thick as velvet, trimmed and well dressed throughout the seasons. The pride of England is the English home, and so, too, the American home is becoming stronger and stronger, more and more a fortress of domestic strength, more and more a thing of beauty, a center of culture and luxury.

Ah, but we have not gone abroad! No? The Coldwell

THOMAS COLDWELL

lawn mower is shipped to Russia, Japan, Australia, New Zealand, France, Germany, England, Ireland, Scotland, Wales, Turkey, South America, India, Mexico, Cape Colony and the Bermudas. They are used on Regent's Park in the West End of London. The superintendent of that park first saw the mower at the World's Fair in Chicago, and later in operation on Central Park, New York. These mowers are used on the parks of Paris and exclusively employed on the Exposition grounds.

The Coldwell lawn mowers have taken the highest prizes at the Paris Expositions, and they have just received the first prize from the Exposition in Paris of 1900. At the works $150 in gold are annually offered the mechanics in prizes for suggestions that will be of value to the company in any direction, either as an advertisement or invention, and an improvement in tools. Mr. Coldwell believes that good tools are what have helped to make American machinery, and all the tools at the factory are of their own invention. Determination to succeed has been the source from which Coldwell's success has sprung. No obstacle has balked him and no conspiracy of circumstances has been able to throw his iron will. Newburgh is proud of this industry, proud of this great inventor and proud of the mechanics whose work is adding luster to homes of illustrious men.

One joke is told of the Coldwell "Imperial" mower— the machine that has made the name celebrated. It was in Philadelphia during the recent National Convention, when the peace and tranquillity of that somnolent city was cruelly

Digitized by Google

disturbed by the contending noise of aspiring statesmen, that Chauncey Depew, Mark Hanna, Major Weston and Captain Dickey went out in search of exctement. The dense quietude wearied them, and the still life of the place dismally oppressed them. They entered Fairmount Park, filled with its suggestions of the hereafter and its samples of prehistoric men. Everything in the park was silent and inanimate with the exception of a Coldell Imperial lawn mower, and that was rapidly pulling a man over the park lawn. The four gentlemen were so delighted they made memoranda in their notebooks. The story is not told to reflect upon that city of dignified rest. Not at all. Philadelphia has a reputation of its own that no one can assail. It is used to prove that there are some machines made that will make a man work whether he wants to or not—and the Coldwell lawn mower refused to rust in the hands of a Philadelphian.

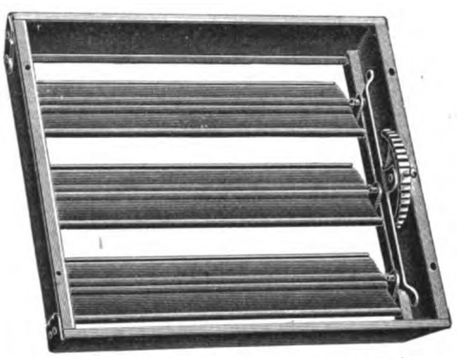
CRESWELL MACLAUGHLIN.

The Brilliant Gas Lamp.

The up-to-date Hardwareman at the present time desires above all things to have a brilliantly lighted store, so that every part of his stock assists his local advertising by being brought prominently before a possible customer. Among the many new lights that are now being placed upon the market, and brought to the attention of the Hardware and house furnishing goods trade, the Brilliant Gas Lamp, which is illustrated in this article, is considered to have many points of merit which make it attractive to the distributing trade. It is claimed by the manufacturers that it will give a brilliant artificial light equal to that used in the finest city establishment, and that this is possible to the most remote country store, leaving no excuse for dim and gloomy stores anywhere. It is well known how a cheerful and bright and well-lighted store will always be a local commercial center, attracting the desirable trade of the town, and creating an impression of the advanced ideas of the dealer's methods of business.

The expense of running this light is claimed to be less than that of any previous method giving equal results, the saving in expense soon paying for the lamp. It is manufactured in a number of different styles, suitable not only for the store, but also for the residence, the demand for the latter being constantly on the increase. The fixtures applying to the

THE BRILLIANT GAS LAMP.



same are simple, durable and handsome, and in every way practical for use in every place where good light is needed.

As the lighting season is now approaching, it is deserving of attention by the dealer, who should inform himself in regard to the most desirable lamp to be used by him, and the manufacturers of the "Brilliant Gas Lamp" claim that theirs can be depended upon at all times and in all places. Combined with economy and simplicity, it ought to meet the exact wants of the modern dealer.

The above lamp is made by the Brilliant Gas Lamp Co., 42 State street, Chicago, Ill., and they would be pleased to furnish further information to inquiring dealers.

Sheet Steel Warm Air Register.

Canton Steel Roofing Co., Canton, Ohio, are pioneer manufacturers of warm air registers and ventilators made of sheet steel, being manufactured exclusively of smooth steel sheets, which enables all parts to be accurately stamped and formed, producing a perfect register, well made, close fitting, from strictly first class material, and unsurpassed in durability. To one particular excellence above others the manufacturers desire to call attenton, and that is the non-breakable feature of this method of construction, which they claim is a great

SHEET STEEL WARM AIR REGISTER.

item of saving, as it removes all liability of breaking in shipping and handling, the annoyance connected with which all dealers selling such goods are constantly subjected to. Then, again, while the weight is reduced fully one-half, the air capacity and strength is materially increased. We illustrate in the cut herewith the register box, showing the valve, valve carriers and the valve operating bar, all of which are of smooth sheet steel, the wheel only being malleable iron. The use of a material possessing a smooth surface enables a superior article to be produced, which admits of a high grade of finish, especially when electroplated in bronze, copper and brass. By the use of materials of sufficient weight and strength to fully meet all requirements, they are able to make all sizes in even inches, in length and width, from 4x6 to 36x36 inches. Even on sizes not illustrated, the manufacturers will quote prices upon application. They have recently issued a new catalogue covering this important line and every dealer handling these goods will make a mistake if he does not write for one of them.

The Paris Exposition Awards.

At the Paris Exposition the United States exhibitors secured 1,981 awards. Of these 220 were grand prizes, 486 gold medals, 593 silver medals, 422 bronze medals and 281 honorable mentions. A very elaborate list of gold, silver and bronze medals was also distributed for collaborators. Every important feature of American industry, art and skill received due and proper recognition. The products of the American farm, the multifarious ores from American mines, the magnificent specimens of our American forestry, received grand prizes and gold medals. The products of our American cotton, wool and silks, in all their manifold achievements, and those of our skilled labor were given equal consideraton with our high grade machinery, such as American harvesting machines, sewing machines, printing presses, the superiority of which is known from one end of the world to the other. Art and education and the superior industries springing from this class of advanced talent were all duly recognized, and by comparison with foreign productions displayed unsurpassed skill, the excellence of which was universally admitted. We have every reason to be proud of the exhibition of our artistic and mechanical skill made in this, the most recent of World's Fairs.

RECENT TRADE PUBLICATIONS.

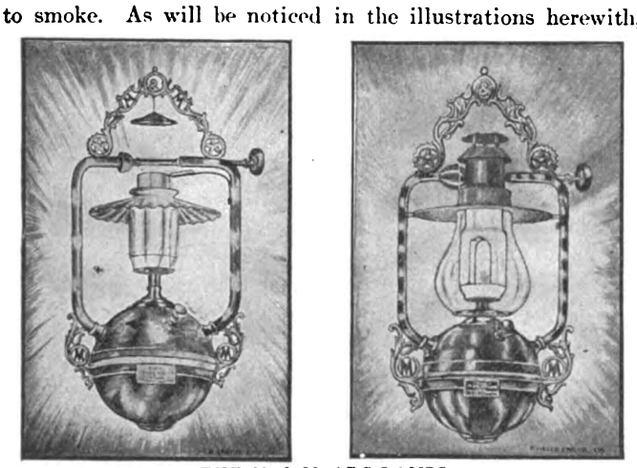
G. A. CROSBY & Co., 176-178 South Clinton Street, Chicago, Ill. Eight pages from their large catalogue showing a small portion of their product, covering their line of screw, foot and hand presses. Printing on good paper, nicely illustrated, with full descriptions of the presses, to the announcement of which the pages are given. The company state in connection that if the receiver does not find what he wants on these pages he should write and give full particulars of his requirements, as the company publish a large catalogue containing an extensive assortment of power presses, drop presses and other machinery for working sheet metal.

W. J. BURTON & Co., 164-166 W. Larned Street, Detroit, Mich. Forty-four-page pamphlet, being denominated "Catalogue G," having reference to the roofing and similar specialties manufactured by this concern and in which they give valuable information regarding the different materials for roof covering, the most satisfactory methods of applying the same, and comparisons are made between different materials as to utility and long service; in fact making an extremely interesting book on the subject, one worth sending for by the dealer interested in this line of work. Included in its contents are shown the various styles of tiles which form part of the firm's product, made of tin or galvanized, the octagon fluted shingles, the manner of using the same, illustrations giving all the various methods of applying, and showing the ornamental appearance of the materials when properly placed upon the roof. This includes a full assortment of finials, ridges and hips of every ornamental description, a large number of tower finials being included in the assortment, a variety of styles of diamond tiles, and as stated above, it forms a pamphlet of information from start to finish, and should meet the perusal of all interested.

LAUGHLIN NAIL Co., Wheeling, W. Va. Catalogue dated June, 1900, of shovels, spades, scoops and ditching tools. This catalogue is a very important one, covering as it does everything manufactured by this well-known company in the shape of the goods above mentioned. It is handsomely printed on coated paper, forming a pamphlet of 34 pages, filled with illustrations giving the shapes and styles of these articles made by them, which covers a larger assortment than is usual, except of the oldest organized companies in this line. Each of these articles has a list number, making it a very easy matter to order without error, and list prices accompany every size, both for black and polished. Another important feature is noticeable in this catalogue: The dimensons of each particular article are given, so that for purposes of comparison or substitution it makes it very easy to order from. Attention is called in the prefatory remarks of this catalogue that this is but a small edition of their regular catalogue, the desire being to announce the fact that their new buildings for the manufacture of shovels, etc., which had been in contemplation for some time, have been completed, and fully equipped with all the necessary facilities of modern improvements for the manufacture of a complete line of goods, including their Antrim or plain back, the Chisholm or hollow back, and riveted back strap goods as well. They state that should any of their customers require specialties not shown in this catalogue, they will be pleased to receive instructions, and every effort will be used to have their orders filled in an intelligent and satisfactory manner. It is a line of goods well worth the attention of the Hardware trade, and the manufacturers would appreciate any request on their part for the several discounts applying to the various patterns.

MICHIGAN STOVE Co., Chicago, Ill., are publishing for the benefit of the trade some of the handsomest stove literature with which that particular line of business is exploited, under the name of the *"Garland Magazine,"* which is published periodically. A recent issue calls attention to base burners, and refers more particularly, of course, to the "Art Garland," which is one of their high-grade styles, showing the same by superb full-page, half-tone illustrations which are very effective in the way of impressing the possible purchaser. Full descriptions are given on the pages opposite the illustrations, so that all questions may be answered, and every part and parcel of the parlor stoves in question may be referred to. Few handsomer specimens of trade printing in this line have been noted, and the editor or compiler deserves great credit for his careful work.

BRIDGEPORT MFG. Co., Bridgeport, Conn. 24-page pamphlet catalogue, covering the line of Hardware and cutlery specialties made by this progressive company. Among the specialties we notice the Jumbo nail puller, the Giant tack puller, Eureka combination plyer and the Standard ticket punch. They manufacture a large line of screw drivers under various names, each style having meritorious features of its own. They are also the manufacturers of Keyes' patent improved solid steel plyers which have been before the trade for several years, the assortment of which has been largely added to and augmented since its utilization by this company, including the Dunwell gas plyer, to which we referred in our previous issue under the head of "New Goods and Specialties," and the line of flat-nosed plyers, cutting nippers and wire cutters that are produced under the same patents. The company are also large manufacturers of shears, including the highest grade to those lower priced lines of goods still handled by dealers in some sections of the country. These they market under a variety of names, each of which represents a special style. They are also manufacturers of the "Up-to-Date" can opener, and other styles of can openers demanded by the Hardware trade.



MORLEY BROS., Saginaw, Mich., have recently published a descriptive catalogue of the Morley Easy-Rolling Shelf Ladder, which includes in its contents expert testimony from all over the world in regard to its undoubted merits. This is claimed to be one of the oldest and best rolling ladder systems in the world adapted to fit all kinds of shelving, but especially suited for retail stores. The catalogue is a pamphlet of 24 pages printed on good paper, and handsomely illustrated, many of the illustrations being photographs from the interior of Hardware stores in different countries in which the utility of the Morley system of step ladders is cleverly brought out. In addition to the same, photo-engraved testimonials from a large number of users are also included in the contents of the book. This method of exploiting the advantages connected with so meritorious an article is an admirable one, from the fact that in addition to the letters received from the parties using them is given in many instances the photograph of the store, which adds a line of conviction to what is said in the testimonial. Instructions are given in this pamphlet how to order the shelf ladder, how to take the necessary dimensions, and giving the particulars that will enable a man to complete the outfit. The several connecting parts are also illustrated in order to make comparisons with other systems, all of which makes it an extremely interesting pamphlet on the subject.

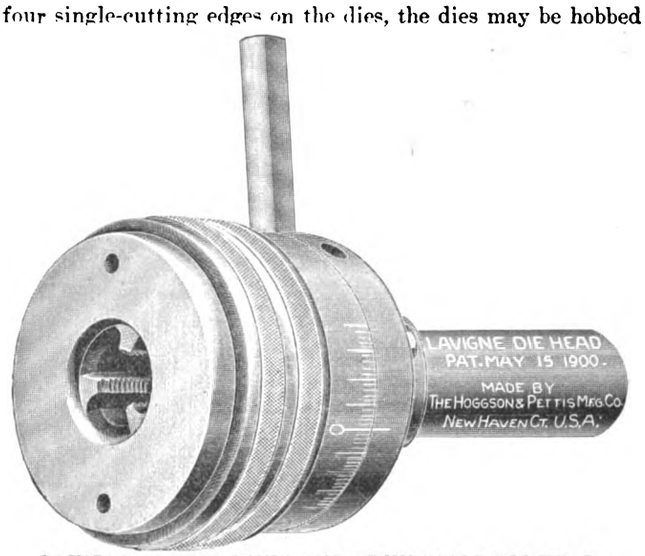
NEW GOODS AND SPECIALTIES.

The M. & M. Arc Lamps.

Martin & Morehead, 53 West Washington street, Chicago, Ill., are engaged in manufacturing a gasoline lamp known under the name of the M. & M. Arc Lamp, illustrations of which we present in the course of this article. They are early manufacturers in this line of business, claiming to have been pioneers in the manufacture of gasoline lamps. Their goods are known as having received practical commercial test, meeting in every case deserved success. This is an air pressure lamp, with over-head generator, calculated to produce a light equal in brilliancy to any commercial arc lamp. The manufacturers claim it produces a light equal to 450 candle power, and will burn 12 to 15 hours with one filling. It is made entirely of brass of the heaviest gauge practical to use in the manufacture of a lamp of this description, and as far as strength and durability are concerned, should last for many years. They are finished in oxidized copper, and present a very handsome appearance. The manufacturers claim that their lamp has been passed upon by the Board of Underwriters without penalty, and that it is absolutely nonexplosive, no perceptible smell and not liable to smoke. As will be noticed in the illustrations herewith,

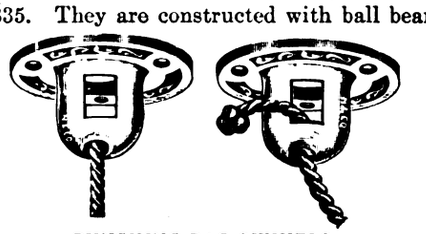


THE M. & M. ARC LAMPS.

they present in any store a handsome and attractive appearance, and have been in practical commercial use for nearly two years. They are provided with combination needle valve that serves to clean the feed hole every time the lamp is turned out, extremely economical in the way of cost, and as it is impossible to fill the lamp while it is lighted, there is no temptation whatever to prompt the housekeeper to do it. These lamps give evidence of an inventive genius and mechanical skill that would make this gasoline lamp approach very closely to every possible requirement for its successful use.

The Lavigne Self-Opening and Adjustable Die Head.

The Hoggson & Pettis Mfg. Co., New Haven, Conn., among the number of high-grade tools manufactured by them, are placing before the Hardware and machinery supply trade The Lavigne Self-Opening and Adjustable Die Head, an illustration of which we give herewith. This is claimed by the manufacturers to be the most practical, universal and in every way admirable tool on the market for the purposes intended. It is of simple construction, having but few parts, yet admits of the finest adjustment, being graduated upon one side of the shell, and a graduated ring is controlled by two small nuts on the back end of the ring; by loosening the same slightly, the graduated ring may be turned around to any desirable size within the working limits of the tool. This obviates any guess work in setting the dies. The illustration represents the die head as made with three or four threading dies, and is designed for use on all turret-head and screw-cutting machines. As this die head has three or four single-cutting edges on the dies, the dies may be hobbed



LAVIGNE SELF-OPENING AND ADJUSTABLE DIE HEAD.

with a hob slightly larger than the work required, consequently will not create any friction, as they are adjusted to the required size, and can also be used on a rotary as well as on a turret or stationary slide. The dies may be thrown open, either by the adjusting plug on the inside or by the lever on the outside. The self-opening die head is claimed to be superior to solid dies, as it does away with reversing machines to run out the work, and also the running of the dies, as the work runs backward in the same. The manufacturers call special attention to the fact that this die head can be used where it would require four of other makes to do the same work. The die head will cut a left-hand thread as well as a right on a stationary slide or turret, and is also able to cut a right or left-hand thread on the spindle. Further particulars will be gladly furnished by the manufacturers on request.

Striking-Bag Swivels.

Nicol & Co., 55-57 West Washington Street, Chicago, Ill., are the manufacturers of a large line of Hardware specialties and mechanical appliances possessing salable merits. Among them they have recently introduced to the Hardware and sporting goods trade, the Striking-Bag Swivels which we illustrate in the course of this article, which represents their No. 335. They are constructed with ball bearings and

PUNCHING-BAG SWIVELS

are made of grey iron. In use the swivels are screwed to the ceiling, the swivels shown being so arranged that the bag can be removed by untying the knot. This particular swivel is finished in japan, packed one dozen in a box, one gross in a case. The manufacturers state that it is almost impossible for the cord to break or wear out, as all the friction bears directly on the ball, which moves at will, in any direction with the swinging of the bag.

Universal Hand Drill Press.

Millers Falls Co., Millers Falls, Mass., and 28 Warren Street, New York City, have long been manufacturers of breast drills that are well known to every Hardware dealer in the United States. They have recently introduced the Universal Hand Drill Press, which we are enabled to illus-

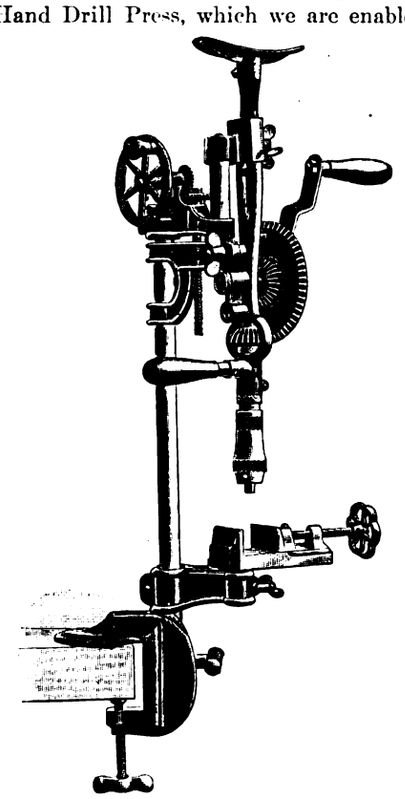

FIG. 1.—UNIVERSAL HAND DRILL PRESS.

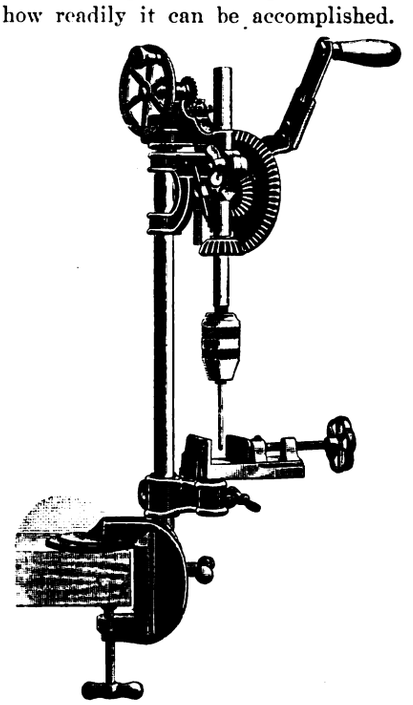
trate herewith, which is designed for use in connection with their No. 10, 12 or 18 breast drill, they being used by attachment to the standard, the No. 10 breast drill being converted with equal ease. In Fig. 1 we show the standard and frame in drill press showing this arrangement with the breast drill, and how readily it can be accomplished. The bench



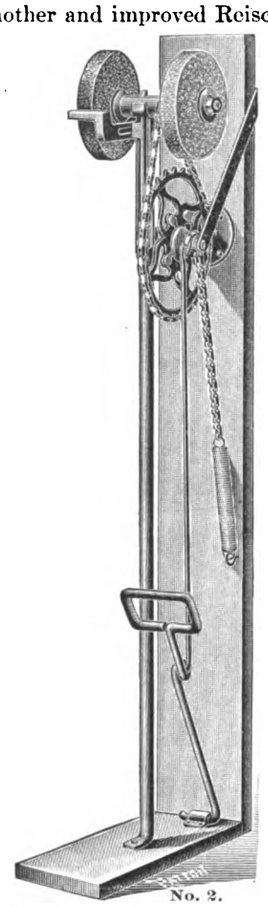


FIG. 2.—UNIVERSAL HAND DRILL PRESS.

clamp, vise rest and frame are all clamped to the upright stand, and so are able to be moved up and down, or swung to the right or left, and, in addition, by means of thumb screws, may be clamped or secured at any desirable point. The vise is hung on a pin which is off-center, so as to give the operator the advantage of a variety of positions. If desirable, the tool can be utilized to work below the bench by dropping the frame and fixtures downward on the standard and securing the upper end of the standard in the bench clamp. Reference is made to this as being a great convenience, especially when used in bicycle repairing; as may readily be assumed, there are a number of other positions, heights and adjustments which may be suggested, as necessity demands their use. In Fig. 2 the Universal Hand Drill Press is represented with special drill attachment provided for it. This drill attachment has two gears, the larger one five inches in diameter and the small one two inches in diameter; as they are provided with extension handle, with three-jawed chuck, they take straight shank drills, from 0 to half-inch. Millers Falls Co. have recently issued a new catalogue of their productions, which we have already noticed in our columns, as being a very desirable one for the Hardware dealer to send for, if he has not already received it.

Reisch's Foot Power Emery Wheel, No. 2.

The Buffalo Emery Wheel Co., Buffalo, N. Y., are putting on the market another and improved Reisch's emery grinder,

REISCH'S FOOT POWER EMERY WHEEL, No 2.

which is catalogued as No. 2, the distinctive features of which are illustrated in the accompanying cut. It will be noticed the grinder has a chain attachment instead of a belt, as used in their No. 1 machine. The mandrel is also arranged for two emery wheels instead of one, so that two grades of fineness may be in operation, affording an easy transportation to forward the work; and the company state that by the methods employed in the construction of this machine, the speed is accelerated nearly twice as great as in that of their No. 1 grinder. This should make it a very desirable appliance for many lines of business, and attract the attention of those dealers handling similar tools of such great convenience.

Rollman Peach Stoner.

The Rollman Mfg. Co., Mt. Joy, Pa., are introducing this season a novel peach stoner, illustrations of which we give herewith. They are made of cast iron, japanned, and it is claimed will stone free-stone peaches rapidly. The peach being placed in the device as shown, and the plunger rod

Digitized by Google

which has a head 3-8 of an inch in diameter, is pushed through the center of the peach, forcing the stone out. The style of the article and the manner of its use is shown in Fig. 1. In Fig. 2, the method by which the device is operated is illustrated in the act of extracting the stone of the peach, which it does rapidly, without disfiguring or loss of

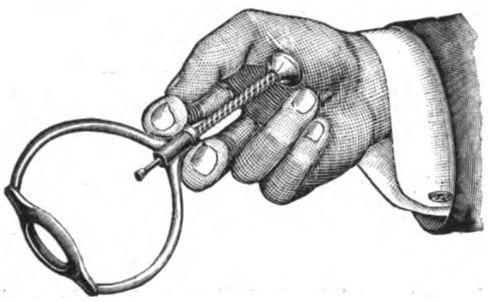

FIG. 1.—ROLLMAN PEACH STONER.

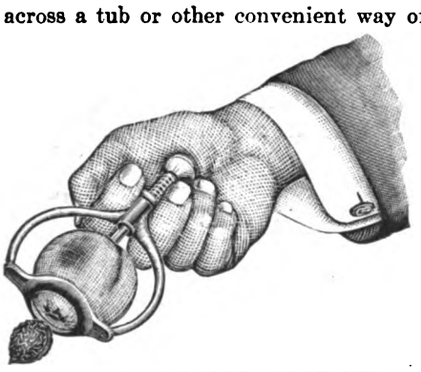
juice. The plunger rod has a throw of 3 inches, which will accommodate quite a large peach. The device is light in weight, and can be easily carried in the pocket. The spiral spring is used to force the rod back to its place. The projections at top of frame enable the user to get a grip with two fingers, forcing the rod down as shown. In the bottom of the peach stoner, on each side of the hole through which the peach stone goes, are two countersunk holes for the purpose of screwing the device on a board, and when a large quantity of peaches is desired to be stoned, the board can be placed across a tub or other convenient way of using the



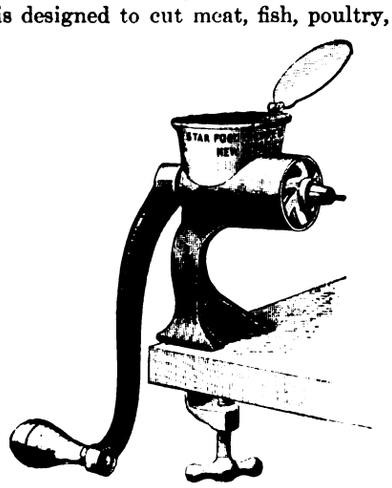


FIG. 2.—ROLLMAN PEACH STONER.

device. It is the desire of the manufacturers that the article shall retail at 25c., which will afford the dealer a satisfactory profit.

The Star Food Cutter.

Charles D. Brown, 160 Duane Street, New York City, is placing before the Hardware and housefurnishing goods trade the Star Food Cutter, which we illustrate in this article. It is designed to cut meat, fish, poultry, vegetables,

STAR FOOD CUTTER.

fruit, cheese and other food articles in the manner desired by the housekeeper. It will cut without mashing or crushing, either coarse, medium or fine particles, being regulated in size by a knife used at the end of the shell; three knives being sent with each cutter, one with three cutting teeth, another with eight and one with twelve for fine cutting. Another feature is the outward curve to the standard, which permits a dish to be placed further under the machine, so that all the material falls into the plate or dish instead of outside. To the top of the hopper is hinged a plate with handle, by the means of which the material to be cut is forced upon the feed screw, so that every particle can be cut, the plate entering well within the hopper. The standard, barrel and hopper are all one piece of material, and all the parts are tinned. A few revolutions of the wing nut on the end releases the knife and feed screw, so that the screw can be withdrawn for cleaning without detaching the handle. The Star Food Cutter is made in family size, No. 1, and a larger size, No. 3, for restaurants, boarding-houses, hotels, etc.

Copeland's Steel Extension Dividers.

Thos. F. Eagan, 72 School Street, Worcester, Mass., is engaged in manufacturing the Copeland Steel Extension Divid-

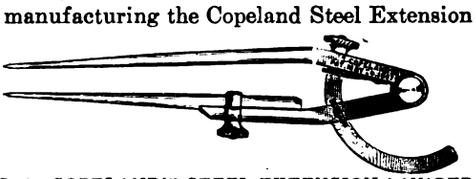

FIG. 1.—COPELAND'S STEEL EXTENSION DIVIDER.

er, illustrations of which we give herewith. In a great many respects their superiority over the old style of divider is so great that it is only necessary to exhibit them in the Hardware stock to insure their sale. Fig. 1 represents the style made with one movable leg, which can be lengthened or shortened as need requires, or may be substituted by a pencil when desirable. The substitution of the common size carpenters' pencil in the place of the movable steel point renders them of great convenience. The attachment that holds the leg or the pencil secures it firmly, is easily adjusted, and readily used; this style of divider is made in 6, 7, 8

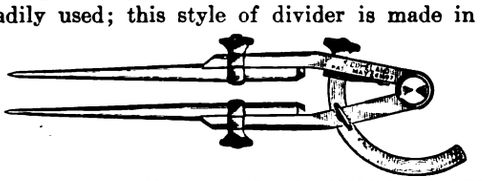

FIG. 2.—COPELAND'S STEEL EXTENSION DIVIDER.

and 10-inch sizes. Fig. 2 shows the same divider manufactured in the style having double legs or extension points, and is manufactured in the same sizes as Fig. 1, with an additional size of 15 inches as well. The larger size is particularly adapted to meet the wants of wheelwrights, carriage-makers, stair-builders or pattern-makers; in fact, for any work requiring a large sweep or size or unusual length of legs.

There are two ways of looking at advertising, both of them right. Advertising should be done during the dull time for the purpose of starting up trade at that time, and also for the sake of the benefit which will come from being continuously before the public's eye. A man should just as quickly think of stopping his advertising in the Summer or in the dull time after the holidays as he should think of closing up his store for several months in the year, and keeping it open only when trade would keep him busy. There are probably many houses in the country that could shut up for four months in the Summer and be ahead in cash at the end of that four months. But at the end of the next four, the gain would not be apparent. It does not take people very long to forget things, and if the store were closed four months, or the advertising stopped four months, a great many people would have forgotten that the store was in existence.

PATENTS Preliminary Consultation Free.
HENRY J. MILLER,
55 Equitable Building, BOSTON.

REVIEW OF THE MARKETS.

Hardware: Business commences with moderate activity, the warm weather which continues Summer conditions through the opening week of September making the demand for goods for immediate delivery not a pressing one. The cooler weather promised for the next fortnight will doubtless make a better showing, as the September business is usually a very active one.

Wire Nails: The mills having announced that they are so far behind on their orders it will be necessary to make deliveries in the order of precedence, has hurried up some of the specifications that have been held in abeyance. It would not be a matter of surprise if under the circumstances a slight stiffening of quotations should give the market a tonic influence at an early date. Quotations may be named as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	$2.20
" less than carload lots	2.25
To retailers in carload lots	2.30
" less than carload lots	2.40

New York prices remain as heretofore:

To retailers, carload lots on dock	$2.48
" less than carload lots on dock	2.55
Small lots from store	$2.60 to 2.65

Cut Nails: Market conditions remain unchanged; demand continues fairly active, but not large in volume. Former prices having been reaffirmed at a recent meeting of the manufacturers, it is believed the trade will now become less irregular as to prices and governing quantities. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, 2 per cent. off in 10 days:

Carload lots	$1.95
To jobbers in less than carload lots	2.00
To retailers in less than carload lots	2.10

New York prices remain substantially the same, the following quotations representing the market:

To jobbers in carload lots on dock	$2.13
" less than carload lots on dock	2.18
To retailers in less than carload lots on dock	2.31
Small lots from store	$2.30 to 2.35

Barb Wire: The demand for this staple is gradually assuming the regular proportions customary at this season, large quantities for any domestic demand being the exception, and orders for limited quantities being much more frequent. Prices remain as previously quoted. Quotations for domestic trade remain as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.50
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.55
" " " Galvanized	2.85
To retailers in carload lots, Painted	2.60
" " Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
" " " Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

Plain Wire: There is a steadily increasing demand for Plain Wire noticeable, the many requirements into which this staple naturally enters creating at this season a fairly active market, which has greatly lessened the stock at the mills and made delay in deliveries more noticeable than has lately been the rule. Current quotations remain, however, as previously established, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

	Base sizes. Plain.	Galv.
To jobbers in carload lots	$2.15	$2.55
" less than carload lots	2.20	2.60
To retailers in carload lots	2.25	2.65
" less than carload lots	2.35	2.75

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)

Nos.			Galvanized.
6 to 9	Base		$0.40 extra.
10	$0.05	advance over base	.40 "
11	.10	" " "	.40 "
12 and 12½	.15	" " "	.40 "
13	.25	" " "	.40 "
14	.35	" " "	.40 "
15	.46	" " "	.75 "
16	.55	" " "	.75 "
17	.75	" " "	1.00 "
18	.85	" " "	1.00 "

For even weight bundles, 50 pounds and over, advance price 5 cents per bundle on above.

Cordage: The rope market gives evidence of no extraordinary activity at the present time. The demand being a moderate one, the following quotations may be said to represent the market for best makes:

	Pounds. Cents.
Manila, 7-16 inch and larger	10½
" ⅜ inch	11
" ¼ inch and 5-16 inch	11½
Sisal, 7-16 inch and larger	7¼
" ⅜ inch	7¾
" ¼ and 5-16 inch	8¼
" Lath Yarn, Medium and Coarse	7

Linseed Oil: Dean Oil Co. quote as follows:

In lots of less than 5 barrels..... 70 cents per gallon.
In lots of 5 barrels or more.....69 cents per gallon.
The five barrel price only applies to deliveries of that quantity at one time.
Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

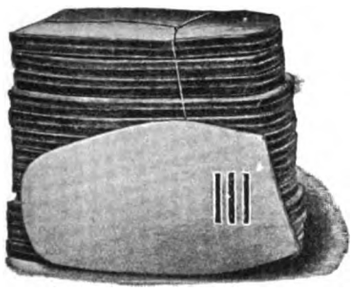
THE PHILADELPHIA TRADE.

Fall is now fairly upon us, and a better feeling seems to prevail in trade circles. As foreshadowed in our last letter, there already seems to be a check to the decline in prices, and on some goods which have declined heavily there is, apparently, a tendency towards higher figures, and we would not be surprised to see higher quotations announced shortly.

Wire Nail manufacturers have already made the public announcement they are now oversold on nails and wire, and that they must adopt the principle of first come, first served.

The country is undoubtedly in a healthy condition. Unless politics should play a more important part than usual, Fall trade promises to be fair, if not good.

The month of August was somewhat of a surprise in the Philadelphia hardware jobbing trade, as the sales foot up better than had been expected, and it is hoped this is merely a promise of what is to come during the balance of the Fall. The weather is also changed for the better, and, as the long hot spell is probably now broken, thoughts will now be turned from vacation and pleasure to business.



Collections are very fair. There are one or two parts of the country where conditions have been retarded, but, on the whole, very little complaint can be made on this score.

BIDDLE HARDWARE CO.

THE PITTSBURGH TRADE.

The extreme heat of August and the opening days of September have interfered with sales of Fall seasonable items to some extent; yet trade is good, and we have no complaint to make. The first cool snap will bring a rush of orders for the neglected items which people don't care to buy with the thermometer in the nineties. The scare in the English coal supply and the export business now being started in bituminous coal, has given quite an interest in our coal company stocks lately. Their business is in much better condition than it has been for many years, and Western Pennsylvania and West Virginia will show large increase in this product during the next year. Buying in Wire and Wire Nails is of a

"hand to mouth" character. No larger stocks are being carried by merchants than will supply their immediate demands, as they all feel that there should be a decline in price to equalize with pig iron and billets. This is quite an inconvenience to the jobber, who cannot keep up his assortment on so small a stock. LOGAN-GREGG HARDWARE CO.

THE DAVENPORT TRADE.

There has been another reformation in the City by the Lake and the City at the end of the Great Bridge on prices of nails, and the Iowa Hardware Jobbers are also expected to be good in future. "So mote it be."

The American Steel & Wire Co. announce their inability to furnish Nails, Barbed Wire, Fence Staples, Plain Wire, both annealed and galvanized, promptly, and serve notice on the trade that hereafter they will be obliged to follow the rule of first come, first served. They state that in order to enable the jobbing trade to make money on their products, they are absolutely maintaining the established differential between jobbers' carload prices and less than carloads, and deplore the fact that jobbers do not always find it to their interest to maintain these prices and secure to themselves the profit that the manufacturers permit them to enjoy. They also claim that there can be no reasonable explanation for this, "as the market gives every indication that there will be a shortage of the goods during the Fall months."

These conditions indicate an advancing market and hence increased demand and large sales during the Fall trade.

SICKELS, PRESTON & NUTTING CO.

Rights of Employees in America to Their Inventions.

In view of the recent decision by a court in Germany that an employe in that country has absolutely no right to any invention he may make so long as he remains an employe, our readers may be interested in the following clear and accurate statement of the relations between employers and men in America as regards inventions made by the latter. We quote from an article by D. Walter Brown in *Power*:

"In general, the law secures to every man the ownership of his own inventions and of the patents granted therefor. But this general principle is much modified by the special relations existing between the employe and his employer in particular cases. A wide distinction is made between the person who is employed merely as a skilled workman and the person who is employed as an inventor.

"As to the former: If a skilled workman, while in the employ of another, but in his own time or after hours, conceives an invention and constructs it at his own expense, using his own tools and materials, and doing the work after hours or in time his employer does not pay for, then the invention, as well as the patent granted therefor, is the exclusive property of the workman. The employer has no rights in it, nor any right to use it in his business, even though it is adapted to that business. The employer in this case can obtain the right to use the invention only by contracting with the workman for it and paying the price agreed upon. But if the workman conceives the invention in the time his employer pays for, and constructs it with his employer's tools and materials and in the employer's time, then the employer obtains certain rights in the invention and patent granted therefor.

"If the invention is a machine, then the machine belongs to the employer, and he has a license to use it in his business and to keep it in repair, and without paying any royalty to the workman therefor. If the employe obtains a patent for the invention and sells it, that sale will be subject to the license to the employer, and the purchaser of the patent cannot prevent the employer from continuing to use the machine.

"If the invention is not a machine, but is an article of manufacture, as a tool in which the employer deals, then, in the circumstances supposed, the employer has a license to make and sell such tools without paying royalty, even after the patent is granted; and neither the inventor nor the purchaser of the patent can stop him from continuing to do so. In each case the employer's license continues over to any corporation into which the employer's business is converted.

"If the invention is a process, then the employer, or the corporation which continues his business, has a license to use that process without paying royalty, even after the patent is granted to the workman.

"In these cases, however, the license to make and sell the machine or the article and to operate the process is not exclusive—that is, it does not give the sole right to the employer—it only secures to him a right to the invention in connection with his particular business; and the inventor, or those to whom he sells the patent, can make, use, and sell the invention, and license others to do so, without let or hindrance from the employer.

"As to persons employed to invent:

"If a person is employed by another to make inventions to be used in the employer's business, and is paid salary or wages on the understanding that his services are to be those of an inventor in improving the machines, tools, or processes which relate to the employer's business, then the inventions which the employe makes relating to that business and the patents granted therefor are the exclusive property of the employer. In such cases the court says that the employe, in making and perfecting inventions, is merely doing what he was hired to do.

"Should the employe leave that employ, he cannot use, or make, or sell the invention, or convey any rights to others under it, except with the consent of the employer."

Letters dropped into a box in Paris are delivered in Berlin within an hour and a half, and sometimes within 35 minutes. They are whisked through tubes by pneumatic power.

Circulars and Advertising.

A writer in the *Spokesman* says that the tendency of manufacturers to use circular letters in place of space in trade papers is a result of the wrong idea of the value of a good name. The right kind of trade paper is the adviser of its readers—it helps them over the hard places in business and gives notice of new things. It is, first of all, the friend of its readers. This kind of a paper will not accept the advertisements of any firm which is irresponsible; this gives an implied good name to every advertiser. The business relations between persons introduced by a mutual friend are more cordial than those who meet because of the forwardness of the one who has something to sell. The trade paper will introduce any manufacturer or jobber to the class of business men he wants to reach. The introduction coming in the nature of an advertisement does not materially lessen the value of the introduction. The reader realizes that the firm is responsible or it would not be allowed to advertise in this particular publication.

Fudge—Do you know Stryker is a man of wonderful perception?

Budge—Yes. He said to me: "I s'pose you haven't a dollar you want to lend me?" And he hit it exactly right. I hadn't.—*Ex.*

There is $50,000,000 worth of United States Government property, as appraised locally, within the boundaries of the Greater New York.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Barberton, Ohio.—Miller Bros., recently of Miller Bros. & Hoffman, have leased the store room formerly occupied by A. A. Ault, next to the post office, and will occupy it about September 15 with a full line of general Hardware and stoves. They intend continuing the tin and roofing business in the building near the Belt Line Railway.

Champaign, Ill.—Robert Burrill, who was formerly connected with the agricultural business of Burrill & Davis, on South Market Street, intends opening the Golden Hardware Store, having purchased the Hardware business of Lucy C. Beyer on South Race Street, which will form the nucleus of his stock.

Hailey, Idaho.—The E. E. Stewart Co. has recently been incorporated for the purpose of engaging in the general Hardware business. Authorized capital $25,000, $10,000 of which is subscribed. The incorporators are E. E. Stewart of Ogden, George C. Thompson of Salt Lake, Lura Moseley of Ogden, George H. Rabens and James E. Orbison of Hailey, and who also form the Board of Directors.

Jackson, Tenn.—J. H. Jackson, now in the grocery business on Liberty Street, is having his store remodeled for the purpose of putting in a full line of Hardware.

Madison, Neb.—R. A. Malony has purchased a business block on Pearl Street, and intends engaging in the Hardware business.

Seattle, Wash.—The Sterling Mercantile Co. have recently incorporated for the purpose of engaging in the Hardware business, in connection with carpets, jewelry, etc. Authorized capital, $20,000. They will be located at 714 Riverside, and expect to be in operation by September 15. The incorporators are Dexter P. Taylor of Spokane, and John C. Strehle, G. E. Myers, William Kromeyer and Edward Ramsey, all of Litchfield, Ill.

Changes and Improvements.

Anthon, Iowa.—A. J. McMahan & Son have sold their Hardware stock to Claude Bradley and E. F. White. McMahan & Son intend removing to Idaho.

Ashley, Ind.—D. E. Gonser and Frank Baughman have purchased the Hardware store of Frank Hoover of this place.

Cairo, W. Va.—W. T. Greer & Son have dissolved.

Colorado Springs, Col.—The Clayton Hardware Co. has removed into the Herley Building.

Dunlap, Ill.—Holmes & Ashbough have purchased the Hardware stock of J. E. Watson.

Dublin, Ga.—The Robinson Hardware Co. has moved into one of the new brick stores recently erected by W. W. Robinson.

Everest, Kas.—Barney Lyons has sold the remainder of his Hardware and implement stock to Wood Price. Mr. Lyons intends taking a rest in the Colorado Mountains, with the intention of looking up a new business location at a later date.

Flushing, N. Y.—Vincent Barnes, the well known plumber and Hardware dealer of Great Neck Station, L. I., after a business career of more than thirty years, has arranged to retire from active business September 1. The business will be continued by William H. Webb of Spring Valley, N. Y., who will take possession about September 15. When Mr. Barnes first came to Great Neck, Mr. Webb was his first apprentice, and is consequently well known in the vicinity.

Friendship, N. Y.—The Drake Hardware Co. recently booked an order for one thousand steel ranges.

Gettysburg, Pa.—The Alleman Hardware Store, which recently changed hands, is now owned by S. L. Johns of McSherrystown and H. M. Gitt of Hanover. Mr. Alleman continues as manager.

Glenville, Ohio.—E. G. Wilson has purchased the Wilcox block on Collamer Street for $4,000. It is rumored a new Hardware store will occupy the building.

Green Fork, Ind.—Samuel C. Tyler has purchased the Hardware business of E. F. Ketch at this place, and will continue the business at the present stand.

Johnstown, Pa.—W. J. & George Fenn, who have been conducting a Hardware business under the firm name of Fenn Bros., recently dissolved partnership. George Fenn will continue the business, and his brother, W. J. Fenn, who is treasurer of the American Specialty Stamping Co., has retired from the Hardware business to devote all his time to the Stamping Company, whose plant is in Meadowvale.

Lenox, Iowa.—The firm of George & Martin dissolved recently. Mr. Martin will continue to manage the business. Mr. George will retire to his farm. Mr. Martin is a thorough businesss man, and his long experience in the Hardware business has established a large trade.

Lincoln, Neb.—A. L. French, a Hardware merchant in this place, has begun the erection of a large brick store building.

Lyons, Neb.—Frank F. Laase of Wisner and W. W. Allenson of Norfolk have bought the Hardware business of L. C. Coffin, at this place. They will adopt the firm name of Laase & Allenson. Mr. Laase will make Lyons his home, and have charge of the business, Mr. Allenson remaining in his position with the Harding Creamery Co. at Norfolk.

Ogden, Utah.—The Z. C. M. I. have moved their Hardware and grocery stocks into their new rooms, which have been fitted up with the latest and most modern appliances. Their Hardware shelving, which is now in place, is the Warren Sectional Shelving, a great improvement, but new to Utah.

Pearl City, Ill.—John H. Knapp has sold his building and stock of Hardware to William and Charles Kuhlemeier, who will continue the business.

Pittsburgh, Pa.—A. W. Kennedy has sold his extensive Hardware store in the Bank Building to Henry Heilman, a prominent contractor of this city.

Roland, Iowa.—E. A. Cole has sold his stock of Hardware and implements to Mr. Mike Hegland.

Scotland, S. D.—William Behl has sold his stock of Hardware, together with the building and lot, to Philip Smith & Sons. Possession will be given in September, Mr. Behl remaining with the new firm for a few months as tinner. The new proprietors are now living on their farms west of this town, but it is understood that they expect to put up a new building and keep a much larger stock.

Scribner, Neb.—F. H. Ranslem, from Cedar Bluff, has purchased the Hardware stock and business of William Eidam. Mr. Eidam will remain in Scribner and devote his time to the well and windmill business.

Toledo, Ohio.—Norton Bros., of the Norton Hardware Co., have added to their line of business, an up-to-date undertaking establishment. It is intended that their new establishment at 817-819 Jefferson Street will be the finest in the city for this special line of business. Mr. W. H. Norton has during the past ten years, in Boston, given this special business his careful and undivided attention, and the prospects of success are undoubtedly good.

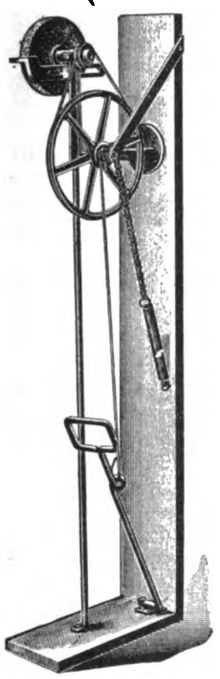
West Milton, Pa.—Theodore Miller, who has been lately engaged in the stove and Hardware business, has parted with his interest in the store to his brother Kerr, and intends residing hereafter in Bell View, Ohio.

Fires in Hardware Stores.

Atlanta, Ga.—The King Hardware Co.'s stock of Hardware, valued at $100,000, seriously damaged by fire; said to be fully insured. Damage about $5,000.

Burtonsville, Md.—Frank P. Chaney's building and stock of Hardware destroyed by fire. Covered by insurance.

Eldorado, Ill.—John Kunz Hardware stock destroyed by fire. Loss $3,500, insurance $1,000.



Gananoque, Canada.—A. E. H. Brathwaite's store destroyed by fire; loss $8,000, insurance $5,000.

Norfolk, Va.—Henry Walke Co., wholesale Hardware, largely damaged by fire. Loss estimated at $25,000, fully insured.

Punxsutawney, Pa.—Grier & Osterhout building destroyed by fire. Loss $40,000, insurance $20,000.

(TRADE MARK)

Arc Lamp

450 CANDLE POWER

Burns 12 to 15 Hours with One Filling.

PATENT PENDING.

STREET LAMP.

THIS is an air pressure lamp with overhead generator, which produces a light equal in brilliancy to any commercial arc. We do not claim more than our lamp will do, but leave it to those who see it to judge of its candle power and light-distributing qualities. We do not claim **100** candle power and give you **40**. Every lamp is guaranteed to do all we claim for it. It is made entirely of brass, of the heaviest gauge of any gasoline lamp made, and there is no reason why a lamp should not last for fifty years.

ABSOLUTELY PORTABLE.

Finished in Oxidized Copper. Presents a very handsome appearance.

It has been passed by Board of Underwriters without penalty. It is absolutely non-explosive. No smell; no smoke. You cannot only own your own gas plant, but electric plant as well, as our claims are not in excess of what we produce.

MARTIN & MOREHEAD, 53 W. Washington Street, CHICAGO.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Brooklyn, N. Y.—The Peerless Bread-Cutter Co. has been incorporated. Its objects are to manufacture and sell bread-cutters. The capital stock is $500, consisting of 100 shares of five dollars each. The Directors for the first year are Peter H. Green, Alexander Neble and Harold Neble, of Brooklyn.

Camden, Maine.—Boston Safety Burner Co. organized for the purpose of manufacturing and dealing in oil burners, with $150,000 capital stock, of which $150 is paid in. The officers are: President, Eugene Humphrey of Boston; treasurer, Kendrick P. Crawford of Boston. Certificate approved Aug. 20.

Chicago, Ill.—Union Stove and Repair Co. has been incorporated to manufacture stoves and plumbing goods. Capital, $2500. Incorporators: Albert A. Lemoreaux, Oscar J. Allison, J. M. Miller.

Jersey City, N. J.—The American Cutlery Co. was formed recently to manufacture all sorts of knives and cutlery. Its capital stock is $500,000. The promoters of the scheme are Hatch & Delmar, of 179 Broadway, New York.

Depew, N. Y.—A new knife and cutlery works has been opened at this place by Michael Dobbins, formerly of the Lancaster Machine and Knife Works. The new shop is on Broadway.

East Orange, N. J.—Smith Machine Screw Co. has been incorporated; capital, $40,000. Incorporators: J. B. Maran, D. H. Sugrue, J. J. O'Connor, all of Lowell, Mass.

Franklin, Pa.—At a meeting of citizens recently $100,000 in stock was subscribed in the Grant Machine Tool Co., of Cleveland, with a view to bringing the works to this city. Mr. Grant decided some time ago to remove his factory from Cleveland and received an offer from Sandusky to go there. Franklin citizens, however, opened negotiations for it, and Mr. Grant decided to move here if $100,000 were subscribed, he himself taking a similar amount of stock. The amount was subscribed within two days. The works will be enlarged.

Hartford, Conn.—A certificate of organization has been filed with the Secretary of State by the Hartford Foundry Co. The corporation is organized for the purpose of running a general foundry for producing castings of all kinds whatsoever, grey iron, steel, copper, bronze, composition, brass and other metals. Also for the purpose of manufacturing such castings into machinery, tools, Hardware and other novelties. The capital stock is $36,000, divided into 360 shares of $100 each. The subscribers are: John W. Conway, Ernest H. Cady and Ernest Cady.

New York, N. Y.—The Bedford Aluminum & Specialty Co. have been incorporated to manufacture aluminum specialties, etc. The capital of the company is $5000, and the incorporators are: G. P. Bedford and S. R. Robinson of New York City and G. H. Vandewalker of Brooklyn, N. Y.

Rochester, N. Y.—The Rochester Wringer Co. has been incorporated, with a capital stock of $20,000, of which $10,900 has been paid in. The company will manufacture wringers and specialties. The directors for the first year are William T. Bradley, Charles J. Palmer and Louis P. Willsea.

Springfield, O.—The Western Mfg. Co. of this city has been incorporated in Columbus, with a capital stock of $15,000, and has begun to move into its new quarters in the old electric light plant, on West North street. The company will manufacture machinists' tools.

St. Louis, Mo.—The Pneumatic Door Seal Co. has been incorporated, capital stock all paid in, and held as follows: Wm. H. Jones, 4996 shares; C. P. Whitbread one, Charles Pickler one, D. W. Maher one, and Paul H. Jones one.

Changes and Improvements.

Chicago, Ill.—The American Cutlery Co. will soon begin the erection of a six-story factory building on Mather Street, near Halstead. The structure will be of mill construction, covering 42 x 100 feet ground dimensions, and will cost about $30,000.

Cleveland, O.—The Born Steel Range & Mfg. Co. have increased their capital stock from $150,000 to $300,000, and changed their name to the Born Steel Range Co.

Philadelphia, Pa.—The well-known firm of Hoopes & Townsend, manufacturers of bolts, nuts, rivets and washers, at Broad and Buttonwood streets, will in the near future erect an immense rolling mill at Fort Washington, Montgomery county. The new mill when put in operation will manufacture all the bar iron necessary for the manufacture of the firm's product.

Perry, N. Y.—The new addition on rear of the Robeson Cutlery Co.'s plant is completed, and new machinery is being placed as rapidly as possible. The increased space and facilities will give room for thirty-five or forty more operatives. Still another addition has already been started, in the shape of a one-story grinding room, where huge grindstones will be hung for the purpose of grinding butcher knives.

Providence, R. I.—The Washburn Wire Co. has commenced to build on its land located on the Red Bridge side of the American Electrical Works. The first building to be erected will measure 300 x 90 feet, will be constructed of iron and be two stories in height. The furnace building will be joined on to the main structure and will be about 160 feet long and 90 feet wide. Plans for the remaining structures have not been completed as yet, and probably will not be until the work on the first building is well under way.

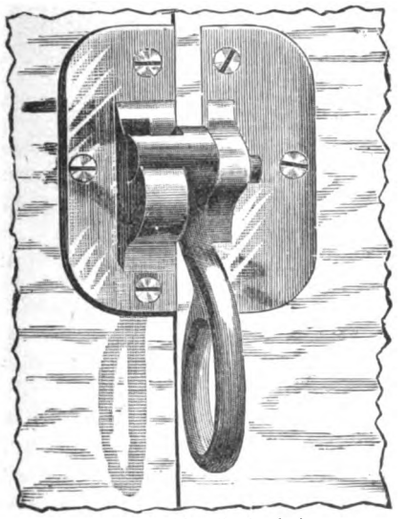
Syracuse, N. Y.—E. C. Stearns & Co., manufacturers of Hardware, have rented from the American Bicycle Co. the bicycle building which the latter company owns at the Stearns plant on Oneida Street.

Tarrytown, N. Y.—The Rand Drill Co. intends to build a large addition to its present factory. The new building will be erected on the west side, and will be in size 280 by 40 feet.

Miscellaneous.

Hartford, Conn.—The annual meeting of the Western Automatic Machine Screw Co. of Hartford was held at the office of the Hartford Machine Screw Co. recently. Officers and directors were elected as follows: President, George A. Fairfield; vice-president, Charles M. Beach; secretary and treasurer, S. H. Curtiss; corresponding secretary, M. H. Levagood. Directors, George A. Fairfield, Daniel Morrell, James U. Taintor, Leverett Brainard, Charles E. Gross, Charles M. Beach, George H. Day, T. Belknap Beach, Joseph K. Lanman.

New Britain, Conn.—The stockholders of the New Britain Brass Co. held a meeting recently and elected a new board of directors as follows: F. E. Pitkin, New York; B. H. Hibbard, D. V. Edwards, James A. Dunn, New York; W. H. Cadwell, Charles H. Beach and John F. Reynolds.



Ottawa, Can.—The Ottawa Saw Works Co. will soon again appear in business. The Company have secured the new building of the Ottawa Investment Co. on Victoria Island and expect to be in operation about the fifteenth of September. Orders for their machinery have already been let and with these large new premises the saw works will have a big industry. The output of the factory will be considerably larger than previous to the big fire. The industry is controlled by a company and P. M. Feeney, late of the old works, will be manager.

Richmond, Va.—The annual meeting of the stockholders of the Old Dominion Iron & Nail Works Co. was held at Belle Isle recently. The report of the president showed the operations of the company for the fiscal year to have been very satisfactory. Arthur B. Clarke was re-elected president, and the following directors were chosen: James Caskie, R. M. Blankenship, H. Landon Cabell, M. F. Montague, F. E. Nolting and J. T. Haxall. At a meeting of the board of directors F. M. Montague was re-elected vice-president; J. B. Carte, secretary, and R. M. Blankenship, secretary of the board of directors.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Arlington, Mass.—Bone & McCarthy, 22 Bennington Street.

Bridgeport, Conn.—The J. W. Woodruff Co. has been organized with a capital of $1000. They will deal in bicycle sundries.

Benton Harbor, Mich.—D. W. Baushke, 107 Michigan Street.

Bridgeport, Conn.—The Bridgeport Gun Co. is now a corporation in itself. Heretofore it was but one of the several departments of the varied Remington interests, but the line has been made distinct by the incorporation of the company with a capital of $200,000, $40,000 paid in in cash and $160,000 in property. The subscribers are George W. Hebard, Brooklyn, 1990 shares; Henry C. Rylands, Bridgeport, 5; Henry B. Cannon, Elizabeth, N. J., 5.

Carlisle, Ind.—O. L. Jones.

Columbus, O.—The Columbus Sporting Goods Co. has been incorporated with a capital stock of $100,000.

Detroit, Mich.—The Detroit Leather Goods Mfg. Co. has been incorporated with $10,000 capital, to manufacture leather bicycle and automobile handles and leather sundries. J. C. McIlroy is president and general manager.

Grand Rapids, Mich.—Geo. F. Krieger & Co.

Hartford, Conn.—The Colt Patent Fire Arms Co. of this city has commenced the manufacture of a new and novel arm in the shape of an automatic pistol that bids fair to revolutionize this form of weapon. This pistol is of 38 calibre and a special rimless cartridge, with a jacketed bullet, having a penetration of 11 inches in pine, with a velocity of about 1300 feet per second, is used. The magazine is similar to that of a Mauser rifle in its workings and is placed in the stock of the pistol. It contains seven cartridges.

Kansas, Ill.—Jas. Arterburn.

Kenosha, Wis.—The Badger Brass Co. has placed on the market the Fortis Electric Exerciser. It is designed to give muscular exercise in addition to a medicinal treatment.

Madison, N. J.—The Bicycle Combination Tool Co. has been incorporated to manufacture bicycle tools. Capital, $100,000. Incorporators: C. E. W. Smith of Madison; A. L. Hall of New York; H. S. Byrne of Yonkers.

Marshall, Ill.—Lou Kuhlman.

Niles, O.—The Columbian-Morgan Handle Bar Co. has been incorporated. Capital stock, $500,000.

Oswego, N. Y.—Gaskill & Cole, M. H. Gaskill and Lee Cole comprising the firm.

Pascoag, R. I.—William Spedding, South Main Street, repairing.

Philadelphia, Pa.—The Stearns Automobile Co. has been incorporated under Delaware laws with a capital of $1,000,000.

Portland, Me.—The National Tire Inflator Co. has been organized for the purpose of manufacturing inflators and other mechanical devices, with $1,000,000 capital stock. The officers are: President, Josiah C. Ward of Portland; treasurer, Benjamin G. Ward of Portland.

Rochester, N. Y.—The Wagner Mfg. Co. has been incorporated with $15,500 capital, to build and sell bicycles, tricycles, automobiles, carriages and other vehicles. The directors are J. George Wagner, Washington G. Humphreys and Chas. W. Eichelman, all of Rochester.

Saco, Me.—The Automatic Arms Co. has been organized for the purpose of manufacturing and dealing in firearms, with $100,000 capital stock. The officers are: President, Arthur S. Gray of Cambridge, Mass.; treasurer, James B. Sias of Boston.

Shelburne Falls, Mass.—The Bickel Mfg. Co. are nearly ready to begin the manufacture of their improved bicycle pedals and wrenches. A large part of the machinery has been installed, and as soon as a motor arrives to furnish power a force of men will be set at work.

St. Catherines, Ont.—The Hamnott Mfg. Co. are establishing a plant for the manufacture of bicycles in St. Catherines. The Council has decided to grant the firm a bonus of $15,000 and a loan of $10,000, payable in 15 years.

Sterling Junction, Mass.—Arthur Sault, repairing.

Syracuse, N. Y.—The W. A. Doubleday Co. has been incorporated to deal in bicycles; capital $6000. Incorporators: W. A. Doubleday, G. E. Hancock, both of Syracuse; E. P. Black of Liverpool.

Womelsdorf, Pa.—H. N. Blumenthal, repairing.

Changes and Improvements.

Binghamton, N. Y.—Waldron's, 107 Court Street, are closing out bicycles.

Bonner Springs, Kan.—B. H. Clark has sold out.

Bronson, Kan.—W. D. Freeman has sold out.

Celina, Ohio.—W. H. Conner succeeds Henry Schmidt.

Cincinnati, O.—J. W. Kraemer succeeds C. A. Ackerman.

Cleveland, O.—The Clay Stampings Co., a large manufacturing concern of this city, who have been more or less identified with the bicycle and automobile trades through the production of stamped parts, are considering a proposition for the removal of their plant to Bowling Green, O., where they have been offered an attractive bonus. S. S. Kurtz, well known to the bicycle trade as president of the Gillam Mfg. Co., which was absorbed by the American Saddle Co., is president of the company.

Marion, Ind.—The Marion Cycle Works closed down for an indefinite period recently, throwing 250 men out of work. B. F. Burk, a part owner of the property, is quoted as saying that the time having come when most all the large manufacturers of bicycles must transform their plants into other industries, the Marion Cycle Co. is already investigating for the purpose of making some other product.

Narragansett, R. I.—W. J. Conway succeeds W. J. Henry.

Newark, N. J.—Receiver Frederick F. Guild is offering for sale the plant of the Stockton Mfg. Co., and invites correspondence on the subject. He lays emphasis on the fact that the plant is well adapted for making the parts for automobiles and other machines of this kind.

Racine, Wis.—Work of rebuilding the Wisconsin Wheel Works is nearly completed, but still a large force of men are employed on reconstructing the plant. The indications now are most favorable for the beginning of operations at an early date.

Washington, D. C.—B. T. Wrenn succeeds P. von Broeckman.

Recent Embarrassments.

Baltimore, Md.—Arthur L. Cline and William Cline, Jr., trading as Cline Bros., dealers in bicycles and bicycle supplies at 304 West Baltimore Street, have filed a petition in bankruptcy in the United States District Court. The liabilities are placed at $7377.61 and the assets at $5672.75.

Berlin, Wis.—A. B. Davlin has filed petition in bankruptcy; liabilities $2010.20, assets $3000.

Boston, Mass.—George H. Anderson, liabilities $1101.15, assets none.

Bridgeton, N. J.—Bridgeton Cycle Co. (not inc.), sheriff in possession.

Denver, Col.—The Silver State Cycle Co. has been adjudged bankrupt in the United States Court.

Recent Fires.

Cleveland, Ohio.—The plant of the Shelby Steel Tube Co. at Beaver Falls, Pa., was badly wrecked by fire recently. The building was occupied jointly by the Shelby Co. and the Boston Electroduct Co., and the loss to both is estimated at $250,000.

Fall River, Mass.—Fire broke out in the Assonet Gun Factory, owned by N. R. Davis & Son, recently, which caused a damage of $500 before it could be extinguished.

Milwaukee, Wis.—The Hoyt Mfg. Co.'s plant at North Milwaukee has been destroyed by fire, entailing a loss of $26,000, with an insurance of $19,000. The buildings were owned by the American Bicycle Co. and the contents were the property of Thomas Hoyt. The cause of the fire is unknown.

Peabody, Mass.—E. J. Porter, Lowell Street, slight damage.

Columbian 1000-Shot Air Rifle.
Patented Oct. 24, 1893.
CHAMPION MODEL.
This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Enameled, $30.00; Full Nickel, $42.00.

ALL THE NEWS. **HARDWARE** HARDWARE EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its **twentieth** volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

. . . PUBLISHED BY . . .

THE HARDWARE PUBLISHING CO.,

275 Broadway, New York.

PRICE $1.00 PER YEAR FOR 24 ISSUES.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

"COULD NOT KEEP HOUSE WITHOUT IT."

Sickels, Preston & Nutting Co., Davenport. Iowa. [*Wholesale Hardware*]: We would not know how to keep house without HARDWARE. The review of the Hardware markets, trade reports and editorials are frequently read before letters are opened that are received in the same mail with HARDWARE.

"THE MOST HELPFUL AID."

Pike Mfg. Co., Pike Station, N. H. [*Whetstones, Oil Stones, etc.*]: We like to keep our name and our wares before the public in a modest way. We have found HARDWARE the most helpful aid toward accomplishing that purpose.

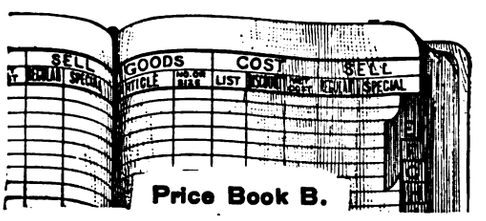
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



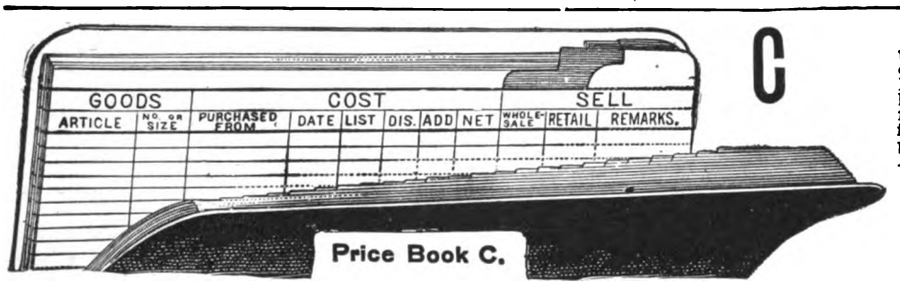
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages, - - $1.00 **A 2**, 400 pages, - - $1.50
A F, 200 pages with flap, 1.25 **A F 2**, 400 pages with flap, 1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

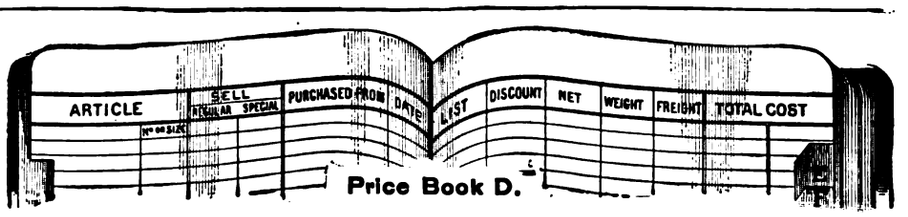
B, 200 pages, - - $1.00 **B 2**, 400 pages, - - $1.50
B F, 200 pages with flap, 1.25 **B F 2**, 400 pages with flap, 1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¾ inches.***

FOUR EDITIONS:



C, 200 pages, - - - $1.00
C F, 200 pages with flap, - 1.25
C 2, 400 pages, - - - 1.50
C F 2, 400 pages with flap, - 1.75

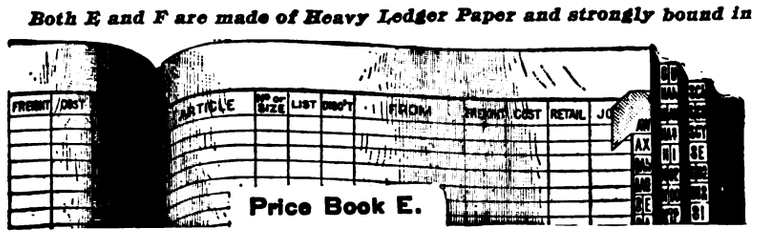
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages, - - - $2.00
D F, 200 pages with flap, - 2.50
D 2, 400 pages, - - - 3.00
D F 2, 400 pages with flap, 3.50

D

Price Book D.



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU** For Chisels, turn to **CH**$^{I}_{U}$ For Iron, turn to **IRO**
" Parers, Apple " **PA**$^{P}_{R}$ " Cutlery, " **CUT** " Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

HARDWARE

C. C. Fouts, M[illegible] is desirous of obtaining the present addres[illegible] who was formerly a traveling salesma[illegible] Rice & Co., Akron, Ohio.

R. P. B[illegible], Tenn., has succeeded to the position with J[illegible] Graham & Co., New York City, formerly filled by T. H. Gossett. He will cover the same territory in the South that was visited by Mr. Gossett.

The Up-to-date Mfg. Co., of Terre Haute, Ind., received recently an order from Nicaragua for 2,000 feet of ornamental wire fencing. The fence was intended for the Central Park of that city.

The Deming Co., Salem, Ohio, will issue on October 1st their Catalogue No. 20, the contents of which will embrace their various lines of Hand and Power Pumps, Hydraulic Machinery, etc. Many new and useful articles will be illustrated on the 272 pages composing this new addition to Hardware literature, and will no doubt prove of interest to pump men, engineers and the trade generally.

The Bicycling World and Motocycle Review on September 7th acquired by purchase *The Wheel and Cycle Trade Review,* and all the right, title, good will, etc., that belonged to it. *The Wheel* has consequently ceased to exist as an independent cycle paper, and from the 13th inst. forms part and parcel of *The Bicycling World and Motocycle Review,* the title of which publication will remain unchanged, representing, as it does, the only cycling weekly published in the East. Their new office is in the Tribune Building, 154 Nassau Street, New York.

F. A. Southwick, the well-known advertising manager of the New Departure Bell Co., at Bristol, Conn., has transferred his talents to the service of the Goodell Co, at Antrim, N. H. During the term of his service at Bristol he made the "New Departure" the most popular and best known bicycle bell in the world, and it is only to be expected that equal success will attend him in his new "sphere of influence." Goodell cutlery is already a synonym for high grade, and their new bread crumber is meeting with marked favor from hotels, restaurants and others desiring to save money and time and increase the quality of the cuisine.

The Michigan Tradesman, published at Grand Rapids, Mich., with its issue of September 12th, celebrated the eighteenth anniversary of its birthday by presenting a 100-page paper. It formed certainly a very attractive and interesting trade journal, being filled with special articles prepared by writers of great prominence and wide experience in their respective lines, and in whose interest they wield their facile pens. The addition of the portraits of the writers of each article adds to the interest of its perusal. The articles are all of them excellent, and reflect great credit, not alone on the authors, but also on the persuasive diction of the editor who called them forth. We cannot help but think it was worthy of a special cover.

The forthcoming convention of the National Hardware Association will take place at the Hotel Jefferson, Richmond, Va., on Wednesday, November 14, 1900, and the two days following. That it will be a memorable gathering goes without saying, and no more influential convention representing the best interests of the Hardware jobbing trade will have taken place this year. They will be red-letter days for Richmond. There is no limit to Southern hospitality following a heartfelt welcome, and the historical landmark city on the James will overflow with good fellows and good feeding during the progress of the deliberations. It is enough to mention that W. S. Donnan of that city is chairman of the Entertainment Committee in order to anticipate the fullest enjoyment possible under such auspices.

The War Department of the British Government recently conferred an exceptional honor upon the Nicholson File Co. of Providence, R. I. Knowing that the War Office of Her Majesty's Government was much pressed for the prompt delivery of supplies for the South African War, the Nicholson Co., acting through its London office, courteously placed its Great Britain stock at the disposal of the Government. A most appreciative acknowledgment was immediately received, and shortly afterwards, after a comparative test of the Nicholson files and rasps with English makes, a larger order was placed with the Nicholson Co. by the War Office for immediate execution. The Nicholson Co. may well be proud of the distinction conferred, as the Government of Great Britain does not generally allow the purchase by its departments of any supplies made in other countries, and but few outside concerns have ever been favored heretofore with orders from the British Government.

A convention of salesmen of the Magnolia Metal Co., at which twenty-five gentlemen from all parts of the United States and Canada were present, was held at the Murray Hill Hotel, New York, on the 6th, 7th, 8th and 10th of September; and all subjects appertaining to the sale of Magnolia Metal were discussed, the greatest interest in the Company's business being manifested. Reports from all concerned showed that the Company's business had never, during the past fifteen years, been so prosperous as during the last year and a half, and that the prospects for the future are far better than ever before. The utmost enthusiasm was shown by all the men for Magnolia Metal and for the future of the business, and the affair wound up by the presentation of a loving cup to E. C. Miller, the vice-president and general manager of the Company. Cables and telegrams from the conference were sent to the London, Paris, Berlin, St. Petersburg and San Francisco offices of the Company, and to a number of absent salesmen, who could not be present.

One of the latest additions to the list of journals published in St. Louis is called *The Credit Man,* and is published by The Credit Man Co., Holland Building, St. Louis, Mo., with Eastern office at 97 Cedar Street, New York. *The Mercantile Adjuster* and *Lawyer and Credit Man,* two well-known journals already occupying a similar field, having decided to discontinue their Credit Men's Department in their respective papers, have turned over to the new journal all the matter of this nature which their editorial staff and correspondents had prepared for their September issues. The first issue of *The Credit Man,* dated September, shows that as an independent journal it will follow similar lines as were exemplified in the journals above mentioned, and cannot help but prove a most successful publication. All credit men, whether belonging to the organization of Credit Men or not, will be interested in the contents of the initial number. It is convenient in size and well worth the subscription price several times over. It is published monthly at $1 per year.

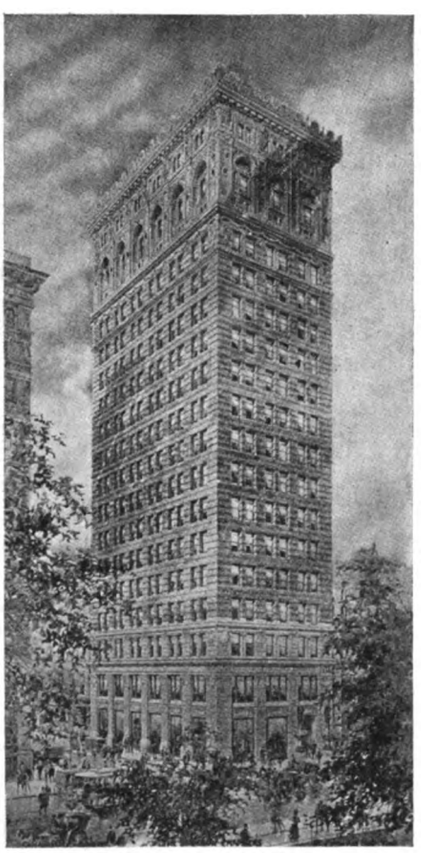
HARDWARE



VOL. XXI. SEPTEMBER 25, 1900. NO. 12.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 275 BROADWAY, NEW YORK.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President
A. P. MITCHELL, - - - Secretary and Treasurer.
W. C. BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

Large stock orders on general Hardware are not materializing as rapidly as the jobbing fraternity would prefer. Orders are coming in in good shape from the travelers on the road, and from houses that are not so readily visited, but they represent a wide diversity of goods wanted and in quantities that indicate a light trade until after Election.

Builders' Hardware is showing increasing activity in the trade centres. A considerable impetus has been given to transactions in real estate owing to a plethora of money and consequent inability to obtain profitable rates of interest from its commercial use. Other forms of investment are constantly presenting attractive features, and the building of houses that will meet a popular demand is a natural result.

The business on wire and wire nails has been of continued importance and increased demand. No weakness in quotations that have so long been current has developed a confidence in the futur[illegible]le lines that has resulted in sustaining orc[illegible]y volume as to quantities. Deliveries h[illegible]d as prompt as desired, but everythi[illegible]siness.

Nearly all branches of [illegible]rade have reached a bottom limit to a scale [illegible] which purchases can safely be entered upon. Concessions have been made in many lines which bring prices close to those prevailing in 1898. Especially is this the case in the line of Hardware specialties, when comparisons of costs are made based on prices of raw material then and now. The holding back of orders while waiting for still lower quotations is no longer prevalent, as the necessity for stock to sell is too evident to risk loss of patronage.

The more certain knowledge of regular requirements for stock in axes, hatchets and other edge tools has made early orders during the year not only possible, but actual, and this branch of the business is in such good request that the loss of a few months of the manufacturing facilities so sanguinely counted upon of the Kelly Axe Mfg. Co. will doubtless have a tendency to make this class of goods maintain a firmness in quotations, and prove difficult of prompt delivery during the season.

The advanced prices on skates made necessary by the increased cost of material affects stock orders to a considerable extent, making specifications much more moderate as to quantity than would have been the case had former prices prevailed. Goods of this character relying for sales upon a short season compel the wholesale distributors to look for orders being booked early; otherwise old stocks are pushed out to the utmost, and a rigid winter succeeding, a natural scarcity is created, under which conditions goods are marketed with less anxiety as to prices, and with more concern as to delivery.

Low prices on cordage have not increased the current sales largely, the constantly declining quotations having the effect of creating a waiting market, with light purchases of an ordinary character as the natural result. The market has shown in recent developments a wide fluctuation in current quotations compared with those prevailing at the commencement of the Spring season.

The Southern trade centres have had their views regarding a profitable future trade greatly strengthened by the present phenomenal advances in price on their great industrial staple. While the crop will be considerably below that of last year as to volume of product, the consequent high prices strengthen every dealer's hope and augur well for the continued prosperous conditions which are so noticeable throughout this favored section of the country.

Money continues easy in Western banking circles; collections are reported much easier than usual under ordinary conditions at this time of the year. The movement of the Western crop which formerly demanded the care and attention of the Eastern moneyed institutions, is now readily cared for by the Western banks without drawing materially upon the money deposits of the banks hereabouts. Trade failures are still represented by reduced ratios, and a confident feeling is the dominant influence underlying commercial activity.

John H. Graham & Co.'s New Catalogue.

John H. Graham & Co., 113 Chambers Street, New York, as representatives of nearly fifty manufacturing plants, have recently issued the most complete catalogue they have ever prepared. It forms a cloth-bound volume of 408 pages, 8x11 inches in size, printed on the best paper for the purpose, and fully illustrated throughout. It is an exceptionally desirable volume for trade distribution, representing in so complete and thorough a manner the products of so many leading concerns, among which are the following: Chadborn & Coldwell Mfg. Co., Coes Wrench Co., Henry Disston & Sons, George M. Eddy & Co., Edward S. Hotchkiss, Iron City Tool Works, Hobart B. Ives Co., P. Lowentraut Mfg. Co., McKinney Mfg. Co., New Departure Bell Co., North Bros. Mfg. Co., Ohio Tool Co., Phœnix Caster Co., T. C. Richards Hardware Co., Slaymaker-Barry Co., Snell Mfg. Co. and Tucker & Dorsey Mfg. Co. These, with thirty or forty others, form the assemblage.

Among a number of excellent features in constructive ability that involve an amount of care and labor that only catalogue compilers can appreciate, will be noted the following: Four pages devoted to a comparative list of carpenters' planes, embodying in the classification all the various kinds and descriptions made by the three important makers, giving numbers and full description, and also whether regular stock goods or those only made when ordered. A page is devoted to the weights and measurements of full cases of the Slaymaker-Barry Co.'s line of locks now made by S. R. Slaymaker. Another page is given to the gross and net weights and measurements of full cases of the curry combs manufactured by Edward S. Hotchkiss.

The lines of goods represented by this old and progressive house are of the most comprehensive and important character, as may well be believed from the partial list of names given above. As it is the intention of John H. Graham & Co. that every up-to-date house handling Hardware should add this volume to their working library, those not in receipt of the same under home distribution should write for one, as it is too important an aggregation of Hardware intelligence to be neglected.

Canadian Imports from the United States.

The Canadian preferential tariff in favor of the United Kingdom has not had the expected effect of reducing the proportion which the United States supplies of manufactures imported into Canadian territory. A copy of the *Canadian Manufacturer,* just received by the Treasury Department Bureau of Statistics, sharply calls attention to the fact that imports of dutiable articles into Canada from the United States in the fiscal year 1899 aggregated over $44,000,000, and from Great Britain less than $28,000,000, and that the United States is furnishing a much larger amount of manufactures of iron and steel than the United Kingdom, and adds:

"The preponderance of trade is overwhelmingly in favor of American manufacturers, and tariff preference in favor of British goods to the contrary notwithstanding, American manufacturers are taking the cream of the business. Is it possible that British manufacturers are entirely unable to compete in the Canadian market?"

The Canadian tariff, it will be remembered, was in 1897 so adjusted that the duty on articles entering Canada from the United Kingdom was made, beginning with April, 1897, 12 1-2 per cent. less than the rate from other parts of the world, and on July 1st, 1898, another reduction in favor of the United Kingdom was made, bringing the total reduction to 25 per cent., as against goods coming from other parts of the world. A recent announcement indicates that, beginning with July 1st, 1900, a still further reduction would be made, so that the rates of duty on articles from the United Kingdom would be 33 1-3 per cent. less than those from other parts of the world. While the effect of the third reduction of 12 1-2 per cent., which went into operation July 1st, 1900, cannot yet be determined, it is practicable to compare the imports of manufactures into Canada from the United Kingdom and the United States, respectively, during the years ending June 30th, 1898, 1899 and 1900, and thus determine whether the advantages which the manufacturers of the United Kingdom have had over those of the United States during that time have had a perceptible effect upon the relative growth of the imports of Canada from the two countries, the United Kingdom and the United States.

The tables which follow show the imports into Canada of twenty principal manufactures from the United Kingdom in the years ending June 30th, 1898, 1899 and 1900, and the imports of a like number of manufactured articles from the United States during the same term. It will be seen that in these articles, which may properly be termed representative manufactures, the increase in importations from the United Kingdom in the fiscal year 1900, compared with 1898, was 32 per cent., while the increase from the United States for the same period was 37 per cent.

Incidentally it may also be mentioned that the total exports to British North America from the United States in the fiscal year 1900 exceeded those of any previous year in our history, being $97,041,722, against $89,570,458 in 1899, and $84,889,819 in 1898.

Finley Acker's Pen Sketches.

A number of pen sketches in types and engravings taken while sojourning abroad by Finley Acker, and published in the Philadelphia Enquirer and other local newspapers, have recently been collected and printed in a new and attractive volume of 110 pages, bound in an original manner, the text printed in color, and the book supplied at 50 cents per copy. The sketches treat of the usual objective points of observant travelers, and the passing scenes are depicted in a readable style with characteristic illustrations, which make the little volume fit a place of its own, and well repays perusal. Among the headings, which indicate the nature of the contents, are the following: Streets of Cairo, Sphinx and Pyramids, Bedouin Wedding Festival, Venetian Serenade, Modern Jerusalem, Coliseum Illuminated, Bazaars of Damascus and Pompeii and Vesuvius.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION: I am desirous of obtaining a trade mark of a certain word, and would like some information as to what course I should pursue to obtain it. I should also like to know how I can find out if the word on which I intend to obtain a trade mark has been already patented or not. I should also like to know about the expense. This information would be greatly appreciated.

REPLY: Any person is entitled to the exclusive use of any lawful trade mark or patent protection by complying with the following requirements: By causing to be reported in the Patent Office a statement specifying the names of the parties, and their residence and business, who desire the protection of the trade mark, together with the proper oath; the class of merchandise and the particular description of the goods comprised in such class to which the trade mark has been or is intended to be appropriated; a description of the trade mark with fac-similes thereof, showing the mode in which it has been or is intended to be applied or used; and the length of time, if any, during which the trade mark has been in use; by making a payment of a fee of $25, as a government fee; and by complying with such regulations as may be prescribed by the Commissioner of Patents. You may ascertain if the words have already been patented or not, by causing a search to be made in the Patent Office, which search, if made through certain attorneys, will probably not cost you more than five dollars. The entire expense of obtaining a trade mark depends upon the fee charged by the attorney employed to procure it. Fifty dollars would probably be sufficient to pay the government fee and also for the service of some attorneys.

QUESTION: I am employed in a large wholesale Hardware establishment and have charge of the receipt and handling of goods for the concern. If any goods are short or damaged, they deduct their value from my wages. Can they legally do this? When entering their employ there was no agreement or anything said about being responsible for damaged goods or shortage. In case I say nothing and let them charge me for the goods, can I recover the amount I have paid for damaged goods when I leave their employ?

REPLY: If there is an agreement existing between you and this firm by which they agreed to pay you a certain sum of money for the performance of certain work, and if, after you performed all this work, you injured some of the firm's goods, you would be liable to the amount of the damage you had done by virtue of your negligence. Under the circumstances you have described, however, we are unable to say by what right your employers deducted anything from your salary for damaged goods or for shortage of goods without first proving before a court of competent jurisdiction that the damage or shortage occurred through your negligence. If you have performed your work, you are entitled to your salary. If you have damaged any goods through your carelessness your employers have a cause of action against you for the damages sustained by them resulting from your negligence. If you allow deductions to be made for certain reasons by your employers, and known to you, and remain silent, we think you impliedly acquiesce and admit your negligence and consequent liability. If you desire to sue your employers for the money deducted from your salary, you should receive your diminished salary under short notice.

QUESTION.—About a year ago I sold some goods to a firm in Albany. Part of the goods have been paid for, but a balance has been due me for the last six months, amounting to about $40. I have written to this firm repeatedly, demanding payment, but I have never received any response to my letters. First. If I should sue this firm for the balance mentioned, would they be compelled to pay my lawyer's fees? Second. Could I get a lawyer in New York to conduct the case, or would it be better to apply to one in Albany?

REPLY.—The firm in question would not be compelled to pay your lawyer's fees. If, however, you were successful in your suit, you would be entitled to some costs, if you sued in one of the lower courts, costs not being allowed in the Supreme Court on a claim involving less than $50. But if you were successful and allowed costs, the firm in question would have to pay them. Third. It might save you some expense to employ a lawyer in Albany, although, if you placed the matter in the hands of a lawyer here it is not unlikely that he would be able to bring about a settlement. A letter from a lawyer often has the desired effect, and if this were all the work involved his services would cost you very little.

QUESTION.—A party died leaving a widow and three children. His estate consists of real estate, $50,000; stock in business corporation, $90,000; bank stock, $25,000, and other personal property, $10,000. Having made no will, what proportionate share would the widow and children receive of his estate?

REPLY.—A widow's right of dower in New York State consists of a life interest in one-third of all the real property in which her husband was seized or possessed of an estate of inheritance at any time during her marriage. The widow may accept a gross sum of money in lieu of her dower; and this sum is ascertained by computing the number of years the widow will probably live according to certain tables similar to those used by insurance companies. The widow's right of dower has reference to real estate only and has no application whatever to personal property. The estate in question would be distributed as follows: The real property would descend to the children of the deceased and the heirs of any deceased child, share and share alike; subject, however, to the widow's life estate in one third of the property. The real estate would not be subject to the inheritance tax. As to the personal property, the widow is entitled to one third, and the remaining two thirds will be divided equally among the children of the deceased or the representative of any deceased child, share and share alike. As all the personal property will be distributed to those persons as nearly related to the deceased as a widow and children, the property will be subject to what is known as a direct inheritance tax, which consists of a tax of one per cent. on the value of the estate; the estate being over $10,000.

Canadian Wholesale Hardware Association.

An extremely interesting meeting of the Canadian Wholesale Hardware Association was held at Quebec on the 13th and 14th inst. It was the third annual convention, and concluded with a banquet given at the Chateau Frontenac. The proceedings of the convention were enlivened by the presence of T. James Fernley, secretary-treasurer of the National Hardware Association of the United States, who was present by invitation as a fraternal delegate. Among the gentlemen in attendance were the following:

T. H. Newman, president, of Caverhill, Learmont & Co., Montreal; Peleg Howland, H. S. Howland, Sons & Co., Toronto; W. Vallance, Wood, Vallance & Co., Hamilton; J. Bowman, Bowman Hardware Co., London; G. McPherson, A. McPherson & Son, Montreal; W. Starke, Howden, Starke & Co., Montreal; W. St. Arnaud, Canada Hardware Co., Montreal; V. Lemiux, Lemiux & Fils, Montreal; A. Angers, Frothingham & Workman, Montreal; A. Jennette, of L. H. Hebert, Montreal; J. Seybold, Seybold, Son & Co., Montreal; A. B. Lee and T. B. Lee, Rice, Lewis & Son, Toronto; T. Birkett, T. Birkett and Son, Ltd., Ottawa; E. N. Chinic and W. Shaw, Chinic Hardware Co., Quebec.

The total number of women over 18 years old employed in the factories and workshops of the British Islands is about 500,000, of whom 11 per cent. belong to trade unions.

IN WESTERN HARDWARE CIRCLES.

Andrew Carnegie is quoted with a variety of creditable and discreditable utterances, but he spoke wisely when he said: "I believe it would be a benefit all around if men of business were to reduce their working capacity during the heated term to the minimum and thus enjoy the fruits of their labor while yet alive to enjoyment." It's the over industriousness of the American manufacturer that produces periods of stagnation, even under abnormally prosperous conditions. At the bottom of the present quiet in iron transactions and movement in the iron ore sphere, it would appear that the market is laboring under such stress just now, for it is impossible to reconcile this condition with other causes. The quadrennial drag anticipatory of Presidential elections seems to have no elementary bearing this year, since the majority of business men and wage earners are outspokenly for a continuation of the politics which facilitated the prosperous conditions during the past three years. The China imbroglio can only be considered a diplomatic incident thus far, the ruling administration not likely to force issues which would disturb our industrial welfare, though a Chinese war would but bring us untold benefits, commercially and financially, immediately upon the opening of hostilities. Foreign nations are at our mercy as regards many very great necessities, among them the Napoleonic triple-plated demand of l'argent, the plebeian stomachal demand and the inexorable demand of the ship boiler. We, the thinkers, know exactly where we are at. They, the idle listeners and devourers of political rot, never knew where they were at. Luckily, they always wind up with the minority. Be content, ye men of business and sound-minded individuals of any station in life. The pilots of our ship are not wont to steer their course where the buoy is, but a will-o'-the-wisp. Is the glimmer of imperialism but aught else? They do not attempt to deny—the Hardwaremen of Cincinnati, Columbus, Toledo, Cleveland or Detroit—that the volume of business up to July 1st was larger than for the corresponding period last year; also, that the profit margin was in many instances better. Quiet during the Summer months was anticipated, for it was a simple example of cause and effect. The market with the beginning of July was like an overworked individual needing rest. The quiet was as needful as it will be beneficial. With the return of refreshing temperature and revitalized spirits, mills and factories will be thrown open to the workers, and a normal development of the market's capacity will ensue. This condition had to be striven for. As long as the supply sources were inadequate to the demand and every mill and factory worked full strain at unseemly hours, the conditions were unnatural and some sort of boomerang action had to follow in the wake. It's been always thus. Permanent prosperity is only possible under enduring normal conditions. The falling off in the demand for fence wire for Ohio account is explained in the Ohio farmer being always a few years ahead in progress of modernization. Modern fence wire is now all-evident through the Ohio country districts. The pioneer fence spikes have almost disappeared. I have also noted that improvements in this direction are usually in orders for woven wire fencing instead of the barb-wire which replaced the picturesque zig-zag fencing of wooden spikes.

I note that architectural iron or corrugated roofing and building material is as yet little in use in rural Ohio for any purpose. And yet, how wofully lacking in essential weather-proofing ideas are the majority of the barns, granaries, etc. There has been hardly any improvement save constant patch-work to fill in the ravages of time. What a field for corrugated iron material. And, no doubt, that field will be thrown open to the markets as soon as the farmer's idea of price has been notched down to. The average farmer is yet a cheap guy, no matter what the earnings of the soil.

Well, if you don't find any other place of business at the average Ohio hamlet or railroad way station, you're pretty sure to strike a store where agricultural implements, farm tools and Hardware are sold. And they all seem to have selected the proper location, for few of them are known to fail. The Ohio farmer is a modern farmer. He dislikes working with old machinery and tools. To make repairs requires time and trouble. So he rather makes a junk shop of a corner of his farm or barnyard, and buys something new. This explains the crop of castaway, old or out-of-order machinery to be noticed in Ohio rural districts. This is well for the producer. And farm machinery has actually become so cheap, any live tenant or freeholder can afford to adopt improved ideas at every other season. Agriculture has got to be a business in which time and labor saved count, especially since the farm youths are born and raised with citifying ideas, and farm labor is very difficult to be had.

The demand for tin in old and new channels is growing apace despite its being substituted in various ways for household and other purposes. Take the canning industry for instance. Its development during the current year has been remarkable despite its already great evolution. Tin is wanted for new purposes right along. It will shortly be used largely in the cigar industry to substitute wooden boxes. No wonder the Republican party has adopted the dinner pail as a campaign insignium. Nothing could more purely emphasize my statement that tin is king as well as iron.

Railroad engineers will have found out that the mogul engines now in use entail lesser wear and tear calculations than the smaller caliber types of less recent years. Of course, that will depend upon the condition of the track. Well, steel rails have long been an expenditure to railroads which the shipper expected he would have to foot in the long run.

Cincinnati, Ohio. J. B. RINDFLEISCH.

The ten items in which American exports to Australia have most rapidly grown in the past six years are bicycles, carriages and materials, drugs and apothecaries' ware, iron and steel, machinery, paper books and stationery, sewing machines, timber, tobacco, cigars, etc., and watches and clocks. We have done well in furniture and upholstery, but we should do much better, for furniture is too high in that market. We have done well in silver-plated ware, but in Hardware, in which we should excel, we have not even held our own. There is a phase in Australian commercial transactions the facts of which are hard to determine. This relates to indirect trade. It is not easy to get behind the collector's books. Owing partially to our geographical situation and partially to the distribution of our industries over the continent, and also somewhat to our weakness in ocean carrying, most Australian products used by our people are purchased indirectly and do not appear on the books as trade between the United States and Australia, while no small amount of American goods find the Australian markets by the same circuitous method.—*Exchange.*

"This comes from making love to the daughter of a genius."

"What is the trouble, Tom?"

"Why, her father has just invented a parlor clock that sounds an alarm at 10 o'clock, turns out the gas and opens the front door by a wire spring."—*Chicago News.*

THE PAN AMERICAN EXPOSITION, 1901.

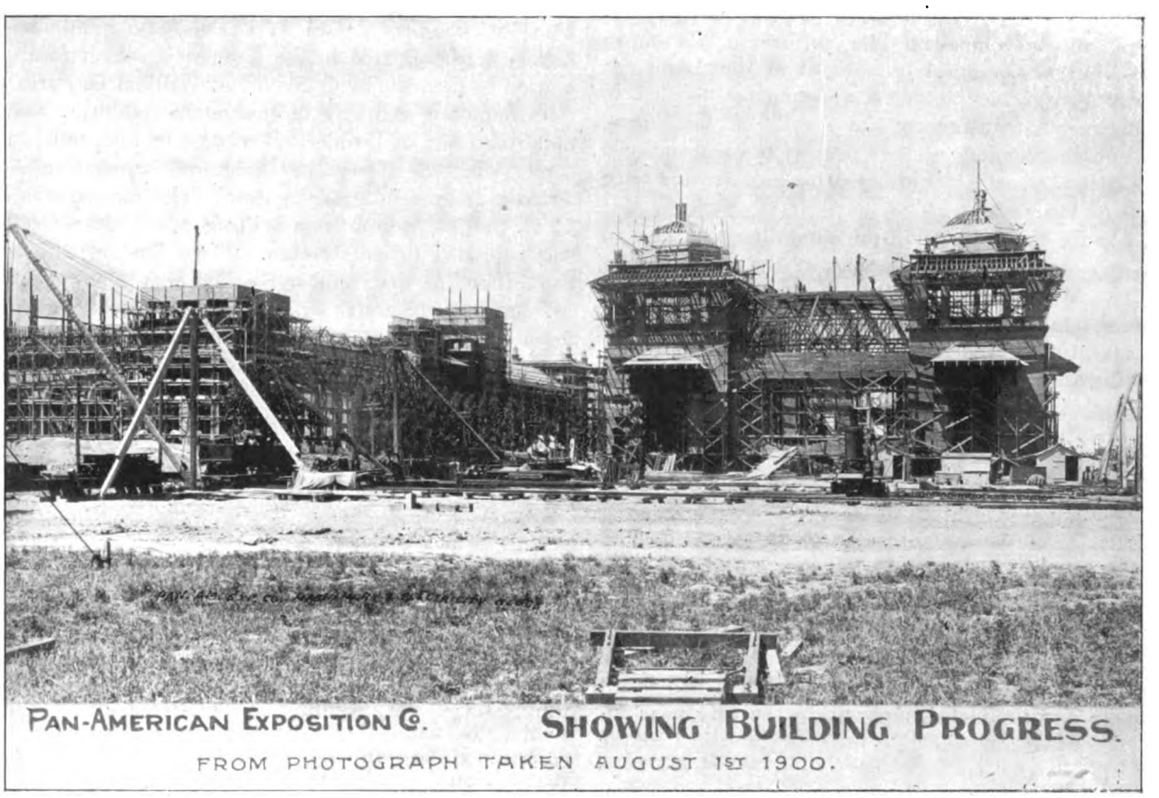
BUILDING THE EXPOSITION.

EVERY WEEK SHOWS DEFINITE PROGRESS UPON THE COLOSSAL ENTERPRISE AT BUFFALO.

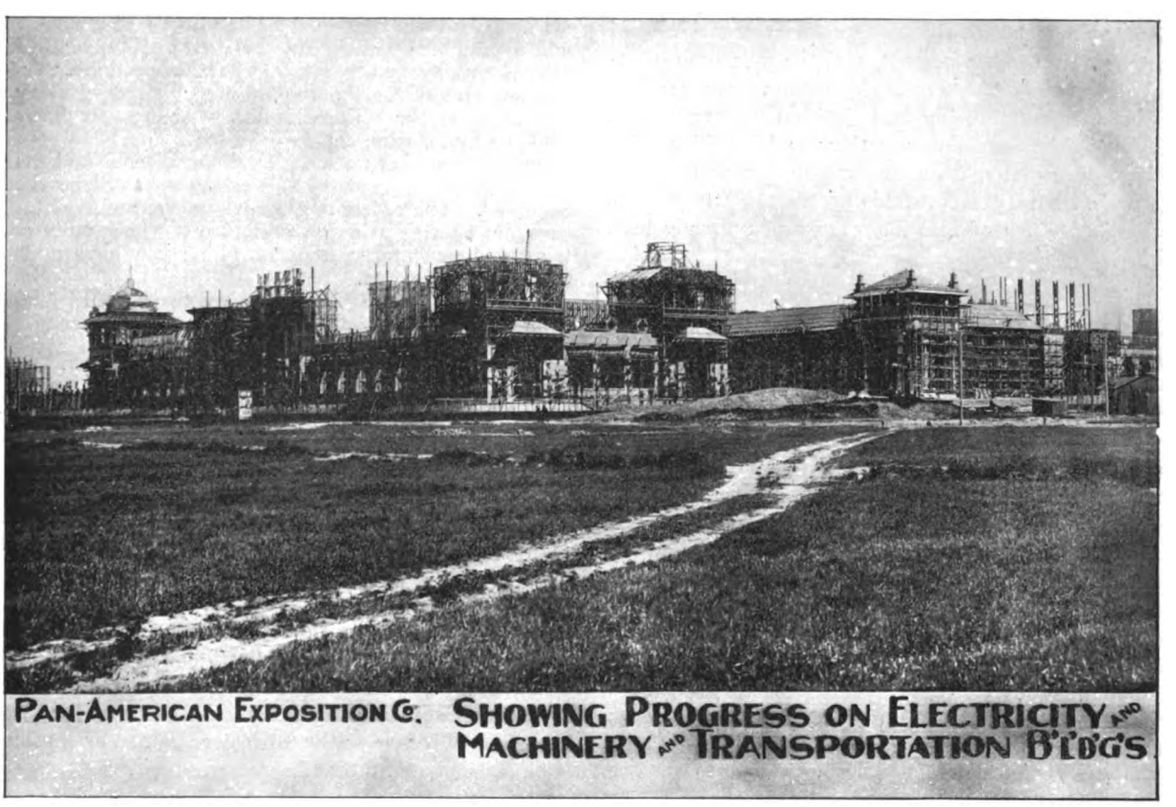
The accompanying views give some idea of the progress of work upon the buildings for the Pan-American Exposition to be held in Buffalo next year. One of these shows the Electricity and Machinery buildings, looking southeast from

that portion of the grounds which will be occupied by the Midway. The view does not clearly distinguish between the two buildings, but they are in reality separated by one of the main thoroughfares of the Exposition known as the Mall, 150 feet wide, which runs east and west. The other shows a nearer view of the Electricity Building looking up at the southeast corner. The point of view is near the base of the Electric Tower, the first lengths of the steel framework of which are now being put in place and which will ultimately reach skyward 375 feet.

All of the large buildings of the Exposition are well under way. These include, besides those here represented, the Agricultural Building, Manufactures and Liberal Arts Building, Graphic Arts, Forestry and Mines, Horticulture, the large group of three Government buildings, Temple of Music, Ethnology Building, Stadium, Midway entrance and concession buildings, New York State Building and the Albright Gallery of Art. The Service Building, which is the administrative headquarters of the Exposition, was completed early last Fall.



By reference to the illustrations here given, it will be seen that workmen are already putting on the gleaming white staff with which all the buildings are to be covered. The staff is prepared in an endless variety of forms, including elaborate statuary, large cartouches and medallions, rich columns, consoles and brackets, soffits and pilasters in relief, and all sorts of architectural ornaments of intricate detail. All the exteriors of the buildings are to be finished in color, presenting a most agreeable effect upon the eye. It is said of this Exposition that it will surpass all former expositions in the extent and variety of its sculpture and plastic decoration. It will also outrival its predecessors in the beauty and completeness of its horticultural and floral effects, and is to have the most elaborate and picturesque presentation of electric effects ever undertaken. The arrangement of the buildings is a symmetrical one, nearly all of the principal structures being grouped about broad courts. About thirty-three acres of land are comprised in these courts, all of which will receive this elaborate embellishment. Large pools, with a bewildering number of fountains and jets of water, will complete the picture, and at night the rippling surfaces of water will be made particularly brilliant by means of floating lights



Digitized by Google

and the wonderful illumination of all surrounding objects by the use of more than 200,000 electric lamps.

The installation of the heavier exhibits is to begin early in November, and the contracts require that all of the principal buildings shall be completed before severe weather sets in. Thus is the public assured that the Exposition will be opened on time and that the early comer will have quite as much to see as those who delay their visit.

The process of building a great Exposition has a charm to every one who has an interest in the development of any grand enterprise. It represents a vast organization, with its director-general and assistant directors, superintendents, contractors, caretakers, foremen and an army of workmen under the discipline necessary to carry on rapidly and successfully a great work. Materials are being brought into the grounds by train loads almost every day, and each week shows definite progress. The illustrations here given show what has been accomplished on the buildings in about three months. Another three months will find several of them completed and all of them so well progressed that the rigorous weather of Winter cannot interfere with their prompt completion.

The Inter-State Retail Hardware Dealers' Ass'n.

The Executive Committee of the Inter-State Retail Hardware Dealers' Association was held at the Sherman House, Chicago, on Tuesday, September 18th, delegates representing Michigan, Indiana, Iowa and Illinois being present. In view of the present condition of President Miller's personal affairs, which compelled him to devote his entire time to his Hardware business on account of the recent fire which occurred in Bloomington, the committee decided to make arrangements transferring the detail of the correspondence and the conduct of that part of the association's affairs to a secretary, who would hereafter be intrusted with that branch of the work.

Fortunately for the association the committee was able to secure the services of Fred H. Cozzens, of Detroit, to act in this capacity. Mr. Cozzens is well known to a large number of the Inter-State Retail Hardware Dealers' Association as a man of exceptional experience and consummate ability in this line of work. Mr. Cozzens has been connected with Hardware and other retail mercantile business in Michigan for some years, and is at present secretary of the Michigan Retail Hardware Dealers' Association, as well as of the Business Men's Association of Michigan, the latter organization being composed of several thousand of the retail merchants of that State, and by reason of his connection with these trade organizations is peculiarly fitted to assume this relation to the Inter-State Association.

A number of matters which were pending at the time of President Miller's fire and which are of extreme importance to the retail Hardware interests of this section, will be at once taken up and completed, and within the very near future a full knowledge of what has been accomplished by the Inter-State Hardware Dealers' Association thus far will be sent to the various members of the State association affiliated with the Inter-State through the State secretary.

The committee feels greatly encouraged at the results of the undertakings up to the present, and the uniformly courteous and considerate treatment which they have received from the large manufacturing and jobbing concerns with whom they have been in communication; and President Miller is to be congratulated upon the fact that in spite of the handicaps which have prevented his protracted attention to these matters, so much of real importance has already been accomplished.

New England Hardware Dealers' Association.

The first Fall meeting of the New England Hardware Dealers' Association was held at the United States Hotel, Boston, on the 12th inst., the chair being occupied by President George W. Burditt. After the regular dinner had been partaken of, the principal business of the evening consisted of listening to the replies to the letter which had been sent out by the association relating to the selling by manufacturers of their product to architects and builders direct. There was some delay in regard to receiving replies from the manufacturers to whom the letter was addressed, which necessitated following it up by the second letter. The second letter being forwarded under date of August 8th, and sent to the same firms, read as follows:

At a friendly conference, held in Boston, between the New England Hardware Dealers' Association and certain Hardware manufacturers, of which your firm or company was one, the following resolve of the committee appointed by the association was discussed:

Resolved, That the New England Hardware Dealers' Association requests that the manufacturers of Builders' Hardware make no quotations of prices, nor give any estimates on contracts to any person, except he be a recognized dealer in Builders' Hardware, and that no quotation nor estimate be made such dealer on such work at less than said dealer can purchase the same goods for stock.

It was supposed that some action would be taken by each manufacturer and a written reply sent to the association. As no answers to our request have been received we earnestly desire you to give us your views on the subject.

To this letter replies were received from a large number of those to whom the letter was sent, but they were not of a sufficiently convincing character to avoid the discussion which was part of the proceedings of the meeting. The replies were read by Secretary James A. Farless, and a number of the members participated in the discussion, which resulted in a motion being made by ex-President William D. Parlin, "That the committee who have in charge the resolution sent to the manufacturers of Builders' Hardware be instructed to confer direct with the American Hardware Association either in writing or by sending delegates." The motion was carried. E. H. Collins, Boston, representing the Meriden Cutlery Co., was admitted to membership. The following entertainment committee for the October meeting was appointed: Henry M. Sanders, Boston; William E. Plumer, Somerville, and John Duncan, Boston. The proceedings of the convention were enlivened by some excellent music provided by the entertainment committee.

Kentucky Retail Hardware and Stove Dealers' Association.

With the hope of forming a State Association, the Retail Hardware and Stove Dealers' Association of Louisville have forwarded a circular letter addressed to the retail dealers in Hardware, stoves, etc., in Kentucky, having in view the accomplishment of this purpose. This letter we give herewith:

About the first of last March, through aid of circular letters addressed to you and other known retail dealers in Hardware, stoves, etc., residing in the State of Kentucky, the Louisville Retail Hardware and Stove Dealers' Association ascertained the opinion of enough dealers to justify the belief that a State association was wanted and could successfully be organized.

With the object in view of accomplishing the desired result you are earnestly requested to be present at a meeting to be held September 26 and 27 at the Board of Trade Hall, Louisville, Kentucky, commencing at the hour of 10 a. m.

Headquarters for the reception of visiting dealers will be established at the Willard Hotel, where reasonable rates and good accommodation can be expected.

During the meeting officers will be elected and matters of vital importance to every dealer present will be thoroughly discussed. The object of forming a Kentucky Retail Hardware and Stove Dealers' Association has been fully explained in a previous letter, a copy of which you have probably received and answered.

On account of the Elks' Carnival to be held in Louisville, commencing September 17 and ending September 29, you will be able to take advantage of reduced railroad rates to this point.

All dealers who intend to come, and it is to be hoped that you will be present, will favor me by making known their intention at their earliest convenience, so that necessary arrangements can be made accordingly.

Yours very respectfully,
SAMUEL R. KORB, Secretary.

The presence of the Elks' Carnival, which is being held in Louisville and will continue there until the 29th inst., enables reduced railroad fares to be obtained from any point in the State. As there is no doubt but what an association of this kind will be extremely beneficial to its members, it is hoped that sufficient encouragement may be given by the Hardware and stove merchants throughout the State so that Kentucky may not fall behind in the experience gained by similar organizations in other States.

Editor *Hardware*: It may be pleasant intelligence for me to inform you that a foreign correspondent has recently sent W. S. Bigelow & Co., 116 Broad Street, New York, a list containing the names of 12 leading Hardware manufacturers, with whom he desires to open up an export trade; and that he stated in his letter of instruction he had selected the names from the issue of *Hardware* dated August 10, 1900, for which publication his subscription was sent a few months ago.

EXPORT TRADE.

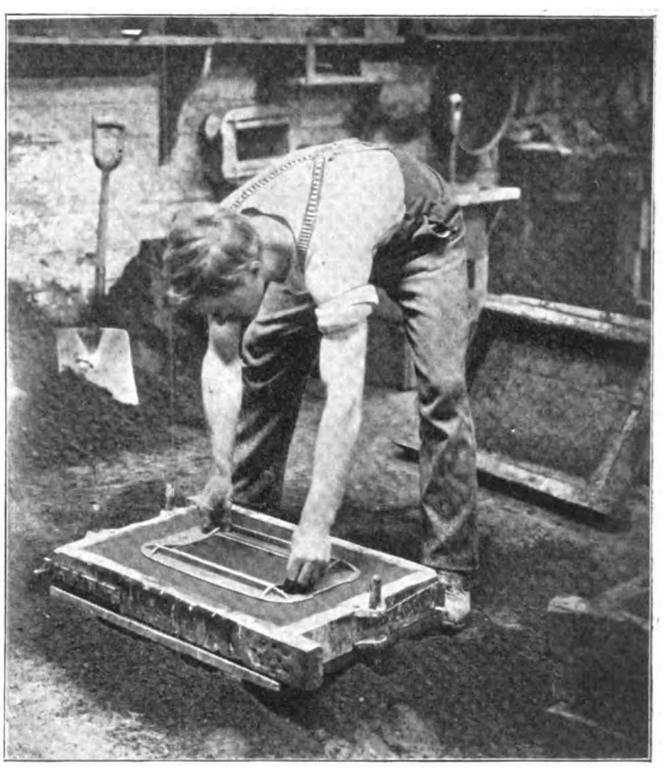
CONCERNING FOUNDRY FACINGS.

From an interesting article prepared by Malcolm McNaughton, of the Joseph Dixon Crucible Co., Jersey City, N. J., concerning the use of foundry facings and the quality demanded for different kinds of work, we have condensed the following:

Molding is generally divided into four classes, to wit: Plate, green sand, dry sand and loam. This classification indicates not only the methods by which the castings are made, but serves in itself as a guide towards the selection of a suitable facing.

Plate molding is always used for light castings, and while it is within a certain sense of the word green sand molding, we have classified it by itself since it demands a different treatment in the application of facing from ordinary green sand molding.



Owing to the ornamental designs prevailing throughout plate molding, facing cannot be rubbed or brushed upon the surface of the mold without injuring the delicate lines of the design. In order to get a smooth casting the pattern is returned, or printed back, to its original position, after a coat of heavy facing, and followed by a coat of charcoal facing, has been evenly distributed over the mold with a blacking bag.

In green sand work a facing may be applied with a camel hair brush, by hand or dusted on with a bag, and afterwards "slicked" down. It should be noted here that since the castings in this class of work are so much heavier than those in plate molding, it is necessary to use a more refractory facing. Dry sand work may be divided into two branches, skin-dried molds, in which the surface of the mold coming in contact with the iron is dried—and dry sand molds, where the whole mold is dried by being placed in an oven or having fires built within or surrounding it. In each method different sand mixtures are used, in fact, such a variance exists in dry sand molding that but few shops pursue a similar course.

In loam molding patterns are largely done away with, and the material used for forming the mold must be one that is very flexible and readily follows the lines of the sweeps. This is very plainly seen in grooved drums and castings of a like character.

Before proceeding further, let us discuss the theory upon which is based the use of foundry facings. The facing is, in the first place, put on the surface of a mold simply for the purpose of preventing adhesion of the metal to the sand of which the mold is composed. But besides the fact that it saves cleaning of the castings, it also gives them a far better appearance, and the surfaces so treated are very much easier to work in the machine shop. Wherever metal burns into the sand it causes hard spots on the castings, which quickly dull the edges of cutting tools. The reason why graphite or plumbago facings or silver lead prevent this is as follows: Carbon is a combustible material, so that when the metal is poured into the mold, there is sufficient amount of air in the mold itself, and also carried in by the stream of molten metal to bring about a certain amount of combustion. You may have noticed that when a drop of water falls upon a warm stove, it rolls about until it is entirely evaporated. The water itself never comes in contact with the hot surface of the stove, being separated by a film of vapor. The condition which obtains here is precisely that which exists in the mold,—the facing begins to burn and a film of gas forms between the facing and the iron. This effectually prevents any adhesion of the metal the sand, and just as long as this gas film exists no adhesion can possibly occur. With regards to the difficulties to be met with in any foundry work, it is understood that a facing must burn in order to be effective, but at the same time if it burns too much, that is, gives off too much gas, we immediately get into difficulty. A proper facing will adhere perfectly to the sides of a mold, and will burn and form gas in a slow and regular manner; that is, burn just enough to furnish this little film of gas referred to above. We want to form the gas, but want to form only the least possible amount of it, and at the same time this gas must be formed during the entire time that the metal is in the fluid condition.

Another point following this is the fact that two bodies cannot occupy the same space at the same time, so that in

using a cheap facing—which burns fast and gives out a large amount of gas—this gas is liable to become pocketed inside of the mold and so prevent the iron from filling the mold. This causes what are called "cold shuts" on castings. The ordinary cheap coal facings act in this way. One of the other difficulties in the use of improper facings is that of their running before the molten metal. Poor facings are not sufficiently adhesive to the sand mold surface. The hot iron, coming in contact with them, immediately dries out the sand, and if an inferior facing is in use, it will run and leave the mold surface bare. These two points alone will indicate to you why the Dixon Co. make such a variety of facings. The conditions which exist in foundries are so various that it would be quite impossible even to make one facing for green sand work, and another for plate work, and that they be equally successful in different shops.

"Well," said the old colored campaign worker, "I've worked hard for Mr. William, en he done got de nomination."

"En what did you git?"

"Well, I got de rheumatism, de slow fever en de promise of $10."—*Ex.*

Nulite Arc Illuminator.

The Chicago Solar Light Co., Garden City Block, Chicago, Ill., have recently purchased the business, machinery, tools, patents and good will of the Hawks Mfg. Co., manufacturers of the incandescent vapor gas lamps, formerly sold under their name. They are making many additions in the way of machinery and tools of the latest and most improved designs, increasing their facilities to the fullest extent, and preparing in many ways to conduct this important business on a very extensive scale. They recognize the fact that a lamp such as they are making is a desideratum in every community, and in addition to the complete line of chandeliers, pendants, table lamps, etc., that have been heretofore placed before the trade, they have recently brought out a new 750 candle-power arc illuminator in two patterns, one designed for outdoor and the other for indoor use, which they distinguish under the name of the Nulite, and so advertise the same. This lamp possesses many new and novel features. In its operation it is almost noiseless, and is guaranteed by the manufacturers to generate perfect gas in any climate or under any kind of atmospheric influences. In its construction it is ornamental and handsome in design, superbly finished in either oxidized copper or

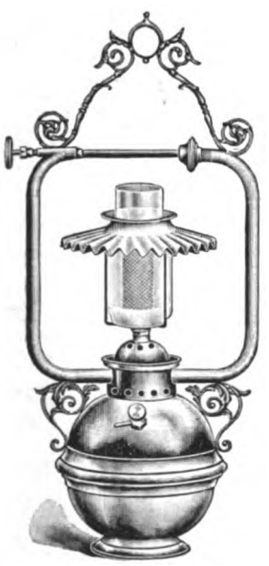

FIG. 1.—THE NULITE INDOOR ARC ILLUMINATOR.

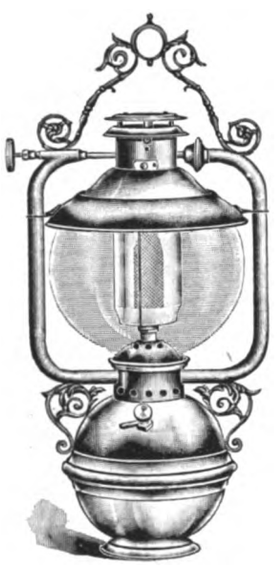

FIG 2.—THE NULITE OUTDOOR ARC ILLUMINATOR.

nickel, as desired, and in every way presents the appearance of a very attractive and salable article, the tank and other fittings being manufactured out of solid copper. The company is also engaged in manufacturing a line of street lamps similar in construction, which are furnished all complete, ready to be placed on the post. The latter are gravity lamps, designed to give a light equal to 100 candle-power each. In the construction of these Nulite lamps the Hawks burners are used on the chandeliers and pendants, they having met with unqualified success since their adoption. They are fully guaranteed by the manufacturers for one year, but are calculated to last, with ordinary care, for a long period. It is referred to that there are no passages to clog up, nor small pipes to burn off. The company have in preparation a new catalogue covering this important line of specialties, which may be had upon request.

Outside Speculation as a Cause of Failure.

This certainly is a subject that should be of intense interest to every thoughtful, careful dispensator of credit, and be seriously considered by every credit man in extending credit and watching accounts. It is not open to question that every credit man can recall instances where he has had to reproach himself for losses resulting from the debtors indulging in outside speculation. It is not necessary to trace any instances to substantiate this statement, for they are of well known occurrence. There are many men whom we have known in the past as prosperous merchants who to-day are business wrecks, self-confessed as consequent upon outside speculation.

The credit man is usually made acquainted with this condition of affairs by a request for an extension of time on matured accounts. It of course does not always follow that a request for a few days' additional time indicates that the merchant is tied up by outside speculation, but just at this time the credit man should inform himself as to the conditions necessitating the request, and determine if the necessity arises from this cause. If so, take the proper stand to discourage it, and having said "No," have the "backbone" to mean it.

Cases come to the credit man's attention in which prosperous business men have had inducements held out to them in outside speculations, where, by having a few shares, an investment of a few hundred dollars would result in handsome returns, which would continue to develop and prove a bonanza. This is the starting point in outside speculation, and when further demands are made to develop this outside project, money which is absolutely required there is taken out of legitimate business. These drafts upon the business go on by degrees until it begins to suffer, and creditors are requested to grant indulgence on matured accounts. Now is the time for the credit man, being made acquainted with the condition of affairs, to be faithful, and not have to reproach himself later on. To be faithful at this juncture would probably save a wreck and loss. Indulgence at this crisis encourages a repetition of the request, and an effort on the part of the debtor to devote some of his time to this outside venture, and thus his business suffers. It is only a matter of a little while when the debtor is insolvent, and the credit man, through his leniency, a loser.

It is safe to contend that the merchant who is doing a prosperous business with only sufficient capital to push and develop that business will do well not to entertain the thought of outside speculation. Should such inducements be held out to him the first question he should ask himself is: Can I afford to sacrifice this much in case I lose? Will my business suffer, will I be denying my family or charity fund what they are justly entitled to? If the conditions are such that neither his legitimate business, family nor charity fund will suffer in case of loss, then he may feel at liberty to invest. J. M. KERR.

The ice habit is making rapid progress in Great Britain, due largely to the incessant clamor for ice in hotels and public places by the thousands of traveling Americans. Not very long ago the attendants of public places in England, where nearly everything except ice was provided, would be insulting if one complained because ice could not be had. To-day all first class places have a few small lumps swimming in a glass dish, and you pick these out with sugar tongs; and in country inns, and even in second class public houses, they apologize for not having it. Though very few saloons and restaurants have refrigerators, many private residences now own them; and there would be far more general use of ice if companies were organized to distribute it from house to house. As it is, one must secure it almost by favor from the fishmonger. Last Summer was an unusually hot one, and all the American refrigerators in stock in England by consignment or otherwise were sold. Properly handled, there is good opportunity in England for American refrigerator manufacturers. Cold storage is a growing business there, and large brewers are putting in extensive cold storage machinery plants; but American manufacturers in this line are not markedly in evidence.—*Exchange.*

"Mamma," said the little girl, her eyes wide with excitement, "I do believe the minister told a story!"

"Why, the idea!" said her mother; "you don't know what you are saying."

"But I do, mamma. I heard papa ask him how long he had worn chin whiskers, and he said he had worn them all his life."—*Indianapolis Press.*

CONSULAR COMMERCIAL COMMENTS.

SIAMESE DEMAND FOR RAILWAY MATERIALS AND FIREARMS.

Minister King, of Bangkok, under date of June 20, 1900, informs the Department that he has succeeded in securing an open tender for American manufactures in the construction of the Petchaburee Railroad by the Siamese Government. Bids for the construction of a plant for the manufacture of ammunition in that country were opened to American competition in March, and a bid was asked from the United States on 20,000 rifles and 10,000,000 cartridges.

BRAZILIAN MARKET FOR PORCELAIN AND GLASS.

Minister Bryan writes from Petropolis recently that one of the leading importers of china and glass in Rio de Janeiro has informed him that this firm has successfully placed United States glassware on sale, the action having been taken at the recommendation of United States Consul-General Seeger. Mr. Bryan expresses the belief that with small effort this branch of trade can be extended in Brazil. He sends for distribution among manufacturers, through the Bureau of American Republics, a list of dealers in these articles in Rio de Janeiro.

GERMAN GLASS INDUSTRY.

Consul John F. Winter writes from Annaberg, at a recent date, that the manufacture of glass in Germany has become a thriving industry. The number of factories has reached 400, giving employment to about 35,000 workmen. This is a good showing, when it is considered that the production of glass is comparatively a new thing for the Empire. For the past thirty years the import from Austria, Belgium, England and Italy has not only been rapidly losing ground, but Germany now exports to those countries certain kinds of glass, such as bottles of every description, etc. Naturally, the German manufacturers have not yet reached that stage where they can compete with Belgium in mirrors, or with Venice in fancy-colored decorations.

GERMAN TRADE IN SCISSORS AND KNIVES.

Consul-General Guenther writes from Frankfort, August 9, 1900:

Within a comparatively short space of time, the better class of scissors and shears has advanced in price about 10 per cent. and the commoner grades about 20 per cent. In knives of the better grades, there has been an appreciation of 5 to 7 per cent., and in the commoner grades of 10 to 25 per cent.

Except in pearl-handled knives, which have advanced largely on account of the increased cost of pearl, the appreciation in values is not due to the influence of raw material; it is practically altogether due to labor troubles. The fact that the men employed on the higher class of goods are being paid better than those working on the the lower grades explains the difference in the increase in the price of the two grades of goods.

Taking into account the labor troubles and the fact that the manufacturers are busy, it is probable that German goods will be steady in price for some time to come.

LAMPS IN MARSEILLES.

The following are extracts from letter written by Consul Skinner, of Marseilles, to New York and Chicago firms:

There are several local manufacturers of lamps in Marseilles, and whether there is a future here for American goods depends upon the price. Lamps retail rather higher than in New York and are inferior in quality. Good reading lamps at modest prices, such as may be found in any American stock, are hard to obtain, the local assortments consisting usually of the two extremes in both price and quality.

The French burner is commonly provided with a lever, by which the chimney may be raised and the wick lighted without touching the hand to the glass. The device is practical and desirable. Efforts have been made to apply an incandescent burner—probably about the same thing as the American Welsbach gas burner—to petroleum in this city, but the experiment was not successful.

The tariff imposed on lamps by the French Government is as follows per 220 pounds:

Lamps of porcelain, glass, iron, brass, etc.....	$11.58
Lamps of gold or silver metal plated.....	48.25
Lamps of nickel-plated metal.....	28.95

If the lamps are detachable, the tariff for the mounting is $1.54 per 220 pounds, the lamp reservoir and permanently connected parts paying as above.

The tariff schedules are so extended that the foregoing figures are tentative rather than positive. In introducing a new article, the only absolutely certain method of knowing the rate of duty would be to submit a sample for custom house examination.

The popular illuminating agent in France continues to be the old-fashioned candle, and in most of the hotels gas has not been distributed through pipes beyond the offices and dining rooms. In many of the very elegant private residences, more particularly those belonging to the old families of the country, the same condition prevails. On a ceremonial occasion, the halls and salons will be magnificently illuminated with wax tapers, distributed in large chandeliers and beautiful lusters, one of the latter in each of the four corners of every apartment. Among the plain people, gas is too expensive for ordinary use, and in many cities like Marseilles electricity is not to be employed at any price. After candles, the oil lamp is next in popularity. A great many people make use of certain simple processes of manufacturing acetylene gas. Devices for the production of this gas upon a small scale for use in lamps are for sale everywhere. A large number of cafes and institutions of that character have private acetylene gas plants, and the arrangements for burning this gas have been so perfected that its use gives satisfaction.

The retail price of oil is 7 cents per liter (1.05 quarts), and for high grade oils the price is considerably higher.

LAMPS IN AUSTRIA.

In reply to inquiries from a New York association (which has received a copy of the report), Consul Hossfeld, of Trieste, says:

The kerosene used in this consular district is the product of Russian crude petroleum. There have been, during the past ten years, no direct importations of American petroleum at Trieste.

I do not believe that American lamps would have to be equipped with special burners if Russian oil were used. In the lamps of Austrian manufacture, either Russian or American oil may be burned.

While some Belgian and German lamps are imported here, probably nine out of ten of all the lamps sold in this consular district are of Viennese manufacture. In fact, nearly all the principal lamp makers of Vienna maintain branch houses at Trieste, as well as in the other large cities of the Empire.

Prices are high, in some instances 30 or 50 per cent. more than in the United States.

I think that cheap lamps, especially, could be sold here to great advantage if our manufacturers would imitate the

Digitized by Google

tactics of Viennese lamp makers and open in the cities of Southern Austria stores of their own. No native can sell American wares in a foreign country as successfully as an American who is familiar with the language and customs of the country. This has in recent years been demonstrated in every large city of Europe. The American knows what most retailers of Southern Europe, at least, have to learn, viz., how to advertise, how to display goods, how to meet competition, how to gratify and at the same time educate the popular taste; and, above all, he knows how to "hustle." It is, moreover, difficult to induce a native retailer to buy foreign wares as long as their sale is still in the tentative stage.

As a great deal of latitude is left to customs officers in the classing of imported ware, it is always advisable to commence operations with trial shipments. The customs officers here, as elsewhere, are guided by precedents, and the importer who has once cleared a sample shipment knows just what duties he will have to pay on his various goods in the future.

All custom duties in Austria are specific and must be paid in gold (the gold florin being equal to 48.7 cents). Lamps pay duty according to the material of which they are made.

If the opening of American retail lamp stores abroad seems inexpedient, those of our manufacturers who are anxious to establish in Europe a permanent and profitable market for their wares should at least send traveling salesmen familiar with the languages and commercial customs of the countries in which they are expected to do business.

Any one looking over the hotel registers of Trieste will find that fully one-fourth of the commercial travelers that come here are from Germany and Great Britain. If it pays Germany and England to send their "runners" here, why should it not pay the United States? Efficient salesmen, with well equipped sample cases, will find more and better customers and will be cheaper in the end than the thousands of circulars which daily fill European waste-paper baskets.

New Catalogue of Fayette R. Plumb, Inc.

Fayette R. Plumb, Inc., Frankford, Philadelphia, Pa., have recently issued an extremely desirable catalogue of their line of goods bound in cloth, 80 pages, and 9x12 inches in size. Within its covers is an exceedingly good display, well illustrated, of the goods made by this concern, which covers hammers, edge tools, sledges, blacksmiths', miners' and railroad track tools, picks, mattocks, grub hoes, etc. Included in its contents are also a few very readable pages, in which are given "a plain talk about tools," which is certainly extremely interesting reading, and of a character that would prepossess one to search the catalogue; also an extremely complete telegraph code for inquiries, purchases and orders, giving a telegraph word for each tool, which word is also given in the body of the catalogue under its regular trade name. The telegraph code used in this particular volume has been the subject, no doubt, of a great deal of thought, as it seems to be the most complete in its application of any that has come to our attention in a similar connection, even including in a single word each of the entire range of discounts with their various combinations from 2 to 80 per cent. It has also a complete index, which indicates in a thorough manner the large and extensive line of goods manufactured and sold by this well-known corporation. The illustrations given throughout the volume are many of them in the finish and color or bronze under which they are marketed. Even the style, color and description of the labels are shown in such a way that the general appearance of the goods is indicated in a surprisingly natural manner, all the various colors being shown on page after page. This catalogue is a condensed catalogue for the trade of 1900, which illustrates all goods that were shown in the catalogue of 1898, which was somewhat larger in its dimensions; a few new styles of hammers, and a special line of tools being the only new addition to the lines since that catalogue. Since the publication of this catalogue, the terms stated therein have been changed to "60 days or 2 off cash in 10 days." The discount sheet to accompany the catalogue was published under date of July 2d. The company are pleased to state that the edition of the catalogue consisted of 5,000 copies, which they have endeavored to distribute by sending one to each of the best retail houses in the United States, it being the desire of the company to have their goods thoroughly well known, that a demand may come from this knowledge through the proper channel. A large foreign edition was also distributed, and from the completeness of the catalogue, and the plainness with which it may be ordered from, would justify the belief that very gratifying results would follow its distribution.

India Rubber Importations.

More than a hundred million dollars' worth of india rubber has been imported into the United States during the past four years, and more than sixty million dollars' worth in the last two years. A decade ago the annual importations of india rubber amounted to about $15,000,000; now they exceed $30,000,000, and are steadily increasing. Practically all of the importations of rubber come in crude form for use of manufacturers, who are constantly extending its application to various new lines of industry. Northern Brazil, Southern Mexico, the West Indies, Central Africa, India, the Straits Settlements, and the Dutch East Indies supply this increasingly important feature of our importations. Probably no single article has made a more rapid growth in its relations to manufactures and consequently commerce in the past few years than rubber. As a consequence attention is now being given to the cultivation and systematic production of the various plants and trees from which it can be produced.

The above statement is suggested by the receipt by the Treasury Bureau of Statistics of a publication detailing the systematic efforts being made for the cultivation of india rubber trees and plants in the British colonies, especially those of Central and South Africa. This, coupled with the well-known fact that our own Department of Agriculture has already begun experiments and inquiries in this line in the island territories of the United States, adds greatly to the interest in this question and to the possibility that the $30,000,000 a year which we are now sending out of the country for this product may be expended under the American flag and among American producers. The fact that Southern Mexico and Central America are natural producers of india rubber in considerable and increasing quantities, and that large quantities are produced in, and exported from the islands and mainland immediately adjacent to the Philippines, suggests great possibilities in this line both in Cuba, Porto Rico, and in the Hawaiian and Philippine Islands.

India rubber is not, as is generally supposed, the product of a single tree, but, on the contrary, is produced from a variety of trees and plants. Some of these flourish only in a moist soil and atmosphere, while others thrive on stony soil, provided they receive ample though intermittent rainfall; though in all cases a tropical or sub-tropical climate is requisite. Most of the india rubber of South and Central America and India is from trees, but in the islands of the Indian archipelago the supply of rubber is chiefly from a gigantic creeper, which in five years' growth attains a length of 200 feet and from 20 to 30 inches in circumference, and which yields annally from 50 to 60 pounds of caoutchouc. Java, Sumatra, Penang, Singapore and French Indo China are already large producers of crude india rubber, or caoutchouc, and its production in the West Indies has been sufficient to indicate the entire practicability of its being made an important industry in Cuba and Porto Rico, as well as in the Hawaiian, Philippine and Samoan Islands.

RECENT TRADE PUBLICATIONS.

ROGERS SCREW CO., Providence, R. I., have recently published a very desirable price list for store use, giving the list prices of screws of their manufacture, which are the regular long prices now in use by all screw makers, and giving the net at various discounts running from 55 to 80 per cent. at the usual variations. This information is usually welcomed by the trade generally, and those who have not received a copy of the same should apply for one, as its convenience in the store makes it extremely desirable to have within reach.

MORSE TWIST DRILL & MACHINE CO., New Bedford, Mass. Pamphlet catalogue of 120 pages, handsomely gotten up, printed on good paper, finely illustrated, embodying in its contents the superior high-grade tools manufactured by this well-known concern, which has been incorporated since 1864. Included in its contents will be found, increase and constant angle twist drills, chucks, reamers, milling cutters, taps and dies, and a long line of machinists' tools, which very important line of goods is well represented. Dimensions are given in almost every instance, price lists accompanying each article, a discount sheet for the trade being intended to accompany the catalogue.

P. & F. CORBIN, New Britain, Conn., have recently published a very handsome catalogue of 24 pages, illustrating the Corbin Door Check and Spring. It is superbly printed, as is usual with this concern, on high-grade coated paper, with a handsome ornamented embossed cover printed in colors and bronze; and is finely illustrated with superior half-tones, and in every way is a credit, not only to P. & F. Corbin, but also to the Hardware trade. This catalogue is printed in the French language, evidently for distribution abroad. They issue a duplicate of the same printed in the German language, the only difference being in the colors employed on the cover, and the language used in conveying the fund of information.

THE SIMMONS HARDWARE CO., St. Louis, Mo. Catalogue 378, devoted to Corn goods, and distributed under the auspices of the "Mail Order Department." This catalogue is printed on very thin paper, with the design of mailing a large edition at a limited expense, evidently in competition with catalogue house methods. Included in its contents is everything in the way of supplies that would come under the head of corn goods, including huskers, gloves, knives, shellers, grinders, etc. A very large and important line of goods is represented between the covers, and is shown in excellent variety. This company has also issued Catalogue 379, devoted to Fire goods, and there will be found in its contents a complete line of such goods for the Fall and Winter trade, as shovels, tongs, pokers, fireplace sets, dog irons, guards, fenders, and irons, stove pipe, ventilators, coal buckets, hods and vases, stove boards, oilcloth, weather strips, etc. This catalogue is similar to the one previously mentioned, printed on thin paper, no pretensions whatever as to style, but very complete as to contents.

STEWARD & ROMAINE MFG. CO., LTD., 124 N. 6th street, Philadelphia, have recently issued an extremely interesting catalogue and price list of single and double patent parallel expansion bolts in iron and brass. In this publication, consisting of 24 pages, which is part of their larger catalogue, full information is given in regard to the expansion bolts which are made by this company in a great variety of patterns, giving full descriptions for their use as well as directions how to apply, and conveying a very complete idea of the utility of these modern appliances. Included in the contents are list prices of all the various patterns, it being the intention that a discount sheet shall accompany the same when sent to the trade. Included in the contents, in addition to the expansion bolts, illustrations and list prices are given of the following: Awning hinges, eye bolts, hitching ring bolts, switchboard bolts, shutter hinge eye bolts, expansion hooks, etc., etc., to all of which the expansion feature is made applicable, making it the most complete publication on the subject of expansion bolts and their numerous applications that has been brought to our attention.

THE LEONARD MFG. CO., Grand Rapids, Mich. Pamphlet catalogue of 20 pages, printed on excellent paper, and beautifully illustrated in colors, giving as graphic a representation of the goods described as is possible to be conveyed in the pages of a catalogue. The catalogue is devoted to the variety of game boards, game board stands, and catalogue and electrotype cabinets which form part of the manufactures of this well-known company. The new game board "Combinola", which is advertised elsewhere in our columns, is shown by a number of illustrations, giving an idea of the great variety of games which are included within the possibilities of this new board. Other illustrations show crokinole in a variety of styles. An illustration of the Leonard Catalogue cabinet displays its utility in an exceedingly graphic manner, and should naturally extend the sale of the same. Included in the pages regarding cabinets, the Leonard system of using this catalogue cabinet is largely dwelt upon, forming an interesting portion of the contents, and making the reader wonder how he could possibly do without it. A recent addition to their line of goods of this character is shown on the final page in the Leonard Sectional Drawer Case, especially adapted for electrotypes, coins, minerals, drawings, proofs, engravings, etc., etc. It seems to be the most complete article of the kind that has ever been brought to our attention.

MICHIGAN WHEELBARROW & TRUCK CO., Saginaw, W. S., Mich. Small envelope size catalogue of 24 pages, having reference to this one branch of the business of this progressive company. A full catalogue of their entire products it is their intention to have forthcoming in a short time. In this catalogue is noted hand carts, improved trucks, wagon and factory trucks, steel-nose store and warehouse trucks, both regular and extra heavy, full bound; and bag trucks, forming a very complete and improved line of these useful goods. Full descriptions are given in regard to sizes, weights, etc., so that selections may be made understandingly. The catalogue also includes the line of wheelbarrows now being made by the company, which embraces the Standard bolted, the Eureka dump, the Valley, with steel wheel, and the Saginaw bolted canal barrow. They also include the Michigan bolted barrow, with iron hub wheel, the mortar wheelbarrow, and the bent handle stone barrow. This extensive line of barrows is in addition to the line of garden barrows and lawn and stable barrows made by this company, which complete the assortment. They are also large manufacturers of Tubular steel barrows with steel tray, which are illustrated and described on the final page of the catalogue; the gauge of steel being given, size of tray at top, the capacity, weight of barrow, and the list price. This is mentioned as showing how much detailed information is endeavored to be conveyed in this small but useful catalogue.

NEW GOODS AND SPECIALTIES.

The Handy Hammer.

The Ulrich Mfg. Co., Rock Falls, Ill., are manufacturing the Handy Hammer, an illustration of which is given in connection with this article. It is claimed to be one of the most convenient tools for the farm or household use, the illustration showing the many handy ways by which this tool can be made serviceable. Among the points to which the manufacturers make reference are the facts that it is handy around the binder, mower or any machine where a hammer or wrench is needed; makes a good tool for any one who drives or pulls a nail or uses a wrench. The claw is pointed so that fence staples or spring keys may be readily pulled by its use. The nail pulling device, as will be noticed, is in front. The wrench is placed under the claw, its use being illustrated, and the wire splicer at the end of the handle makes a neat splice, a very little experience being required; saves wire and avoids by its use injuring the hands in any way during the operation. It will be found quite a useful tool at a very moderate price, and should be in every Hardware stock.

THE HANDY HAMMER.

Appleby Patent Motor Chains.

The Chantrell Tool Co., Reading, Pa., John H. Graham & Co., 113 Chambers Street, New York, sales agents, are manufacturing among their other specialties, a line of motor chains for automobiles, etc., which are known and marketed as 400 M. This special chain is made under the Appleby patent, and is similar in design to the bicycle chains made by this same concern, except, of course, that they are very much heavier, being designed for the kind of work suggested as an automobile specialty. They are manufactured in 1, 1 1-4 and 1 1-2 inch pitch, and the side links are composed of carbon crucible cold rolled steel, which possesses a tensile strength equal to 160,000 pounds to the square inch, making them positively safe and reliable under any possible pressure to which they may be subjected. The steel is hard cold rolled, and made especially for this use. The rollers are made of tool steel, and are tempered in a manner to make them as hard and tough as is possible. In the construction of the chain under these patents, among the important features are the facts that the rollers run on hardened tool steel sleeves that are driven in place in the side links, which enables the rivet to have a bearing given to it that is full length, and also gives the roller an independent bearing on the hardened tool steel bushing. There is a hardened bushing or sleeve driven on the rivet. This bushing is made of the best tool sheet steel obtainable, and it also has a bearing the full width of the chain. We present illustrations herewith, showing in Fig. 1 the chain as it appears, representing one size of the many that are made, and Fig. 2 illustrates the parts composing this method of construction, the advantages of which will be apparent at a glance. It is referred to by the manufacturers that the hardened tool steel sleeves which are driven on the rivet make the best known bearings used in the construction of an article of this character—that is, two hardened steel surfaces running together.

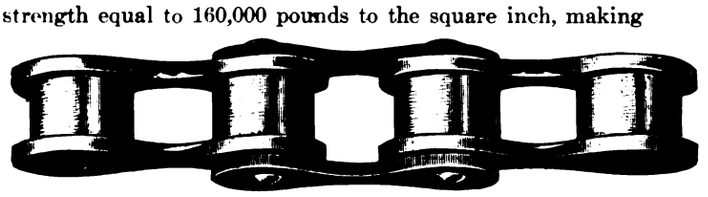

FIG. 1—APPLEBY PATENT MOTOR CHAIN.

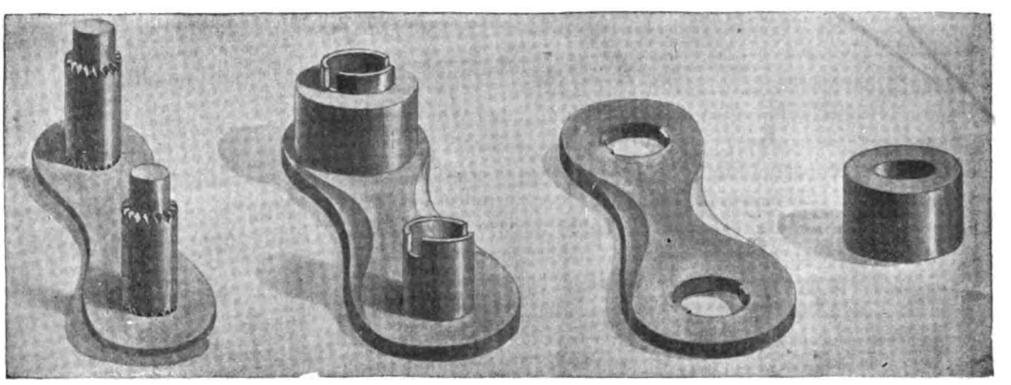

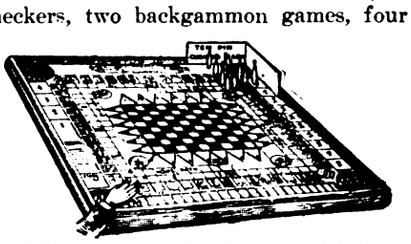

FIG. 2.—APPLEBY PATENT MOTOR CHAIN.

A New Game Board, The Combinola.

Among the very desirable articles coming under the head of holiday goods, which Hardware dealers are apt to add to their assortments at this time of year, may be mentioned the large game boards, which, in the housefurnishing department of a Hardware establishment, meet with ready sale, enabling the dealer to get his share of the brisk trade prevailing during that season. No more attractive article of this class has been brought to our attention than the one which we illustrate here, which is marketed under the name of the "Combinola," the name being significant of the forty games in one board, which is the great feature of this meritorious board. Included in this large combination are composed the following games, with complete rules, cues, flags, ten pins, and all other implements required: Twelve styles of carrom and billiardette games, chess, including the men; four styles of checkers, two backgammon games, four styles of crokinole, seven styles of ten pin games; also many new, highly instructive, and fascinating games, such as national exports, chess arabia, battles of the British and Boers, the pawn shop, prisoner's goal, bagatelle, curling, foot ball, parlor croquet and the automobile race. Providing a fund of amusement for old and young, it should meet with a large sale. It is manufactured by the Leonard Mfg. Co., Grand Rapids, Mich., who will be pleased to furnish full particulars on request. See their advertisement on page 15.

NEW GAME BOARD, THE COMBINOLA.

Digitized by Google

Fenn's Patent Rotary Ventilator.

George E. Fenn, 94 Blackstone Street, Boston, Mass., is the manufacturer of a large number of ventilators and chimney stacks, having made a specialty of this class of work, one of his latest designs being the patent rotary ventilator, of which we give illustrations herewith. These ventilators are designed to work on the same principle as an exhaust fan, but with a vertical instead of a horizontal axis. By the revolving head or fan a suction is created that is impossible to obtain with any stationary ventilator similarly placed. For creating a draught to chimneys, it is stated it is a

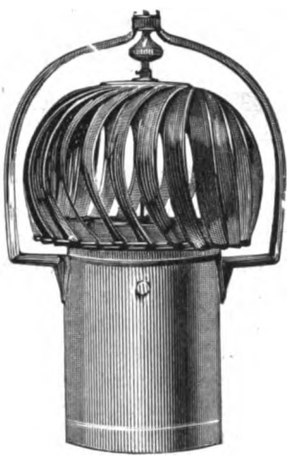

FIG. 1.—FENN'S PATENT ROTARY VENTILATOR.

ventilator to be relied upon to give perfect satisfaction. Fig. 1 shows the general appearance of the ventilator, while Fig. 2 gives a sectional view of the bearings, which are one of the most important features, as by the aid of these the ventilator is rendered entirely noiseless. The upper bearing consists of a brass tube projecting down through the cross-head, in which runs a cone-shaped nib at the upper end of the spindle. Both tube and nib are encased in an oil cup of spun brass (see Fig. 2, Letter B). The lower part consists of a hardened steel step at the bottom of the lower oil cup, on which runs the lower end of the spindle, which is tempered to correspond with the step. This is noted in Fig. 2, Letter C. The lower

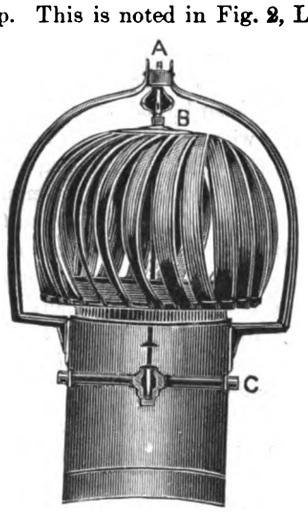

FIG. 2.—FENN'S PATENT ROTARY VENTILATOR.

oil cup consists of a malleable iron cross, with nipples through and fastened to the body by lock-nuts and caps, thus stiffening the ventilator as well as forming a reservoir for surplus oil to supply the lower bearing. It will be noticed by reference to Fig. 2 that both upper and lower bearings run directly in the oil, so that they are perfectly noiseless and free from friction, and are always lubricated as long as there is any oil in the cups. The cups will hold oil enough to last from one to three years, depending somewhat upon the amount of heat given out by the chimney. These ventilators are warranted to be absolutely storm proof, and the peculiar construction of the head renders it impossible for either rain or snow to reach the inside.

Linemen's Side-Cutting and Splicing Pliers.

The Peck, Stow & Wilcox Co., Southington, Conn., and 27 Murray Street, New York, have recently put upon the market three new and desirable styles of side-cutting pliers, especially suitable for electricians, linemen, etc. Fig. 1 represents their No. 50, which is made of the best material, and furnished in sizes of 6, 7, and 8 inch. This plier has a splicing attachment by means of which two ends are joined and each wire end closely and firmly coiled around the main body of wire on both sides of the junction. An end is passed through the round hole in the handles near the pivot, and

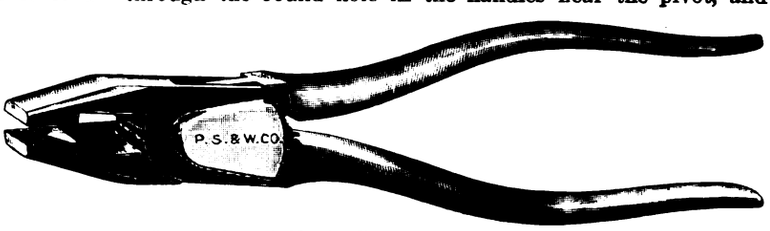

FIG. 1.—NO. 50, LINEMAN'S SIDE-CUTTING AND SPLICING PLIER.

the wire passed over the groove projection for coiling. This plier is made in a perfect manner, with box joint, having side cutters on the reverse side. Fig. 2 shows a similar plier in material and finish, but it is made with a lap joint, and furnished in 6, 7 and 8 inch sizes. This is known as the No. 60. This plier also has a splicing attachment for accomplishing a similar result to that described in No. 50, except that the wire is passed over a grooved circular button for coiling. By inspection of the illustration, it will be seen that Section

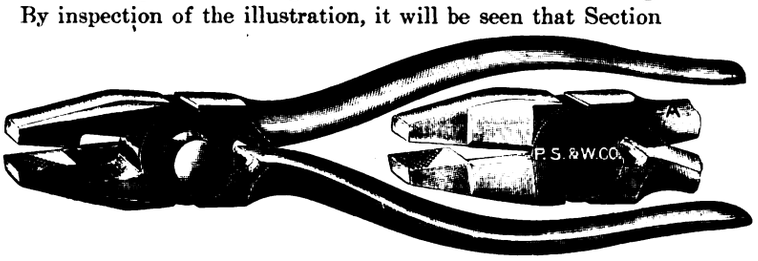

FIG. 2.—NO. 60, LINEMAN'S SIDE-CUTTING AND SPLICING PLIER.

A is a detail showing a side cutter, which is similar in both pliers. Another plier, Fig. 3, represents the No. 40, a forged steel lap joint side-cutting plier, being similar to No. 60, but without the splicing attachment, and in appearance similar to the No. 30 side-cutting plier made by the above company, and long known to the Hardware trade. The No. 40 is made in four sizes, 5, 6, 7 and 8 inch, and although, because of its lap joint construction, it is marketed at a lower

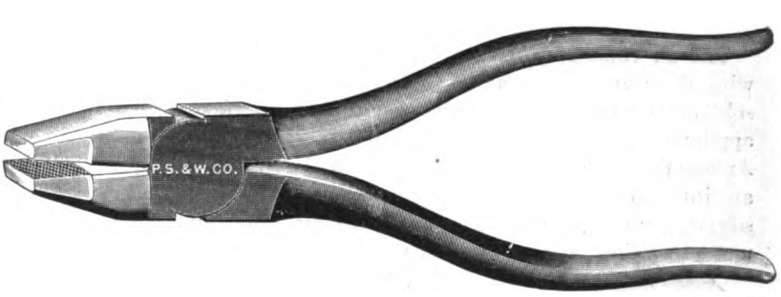

FIG. 3.—NO. 40, LINEMAN'S SIDE-CUTTING AND SPLICING PLIER.

price for general sale, is claimed to be equal to any in the world, except the box joint plier No. 30 above referred to.

"Perfection" Spring Door Latch.

The Clark Mfg. Co., Moline, Ill., are manufacturing and distributing through the Hardware trade the "Perfection" spring door latch, illustrations of which are presented herewith. It is designed for barn and outbuilding doors and gates, and intended to hold the door open as well as to lock it when shut. Fig. 1 shows the latch in position on the inside of the door, the cut showing the door apparently transparent in order to exhibit the working of the latch. When it is deemed desirable to lock the latch, it can be done by the button at the back. Fig. 2 shows the door hooked open in the

Digitized by Google

loop, which goes with the latch. This feature is claimed to be a great improvement over others, as there is no possibility of the door or gate springing shut while stock is being driven through the opening. It is manufactured of durable material, the best malleable iron being used in its construction, and designed to last an indefinite period. Among the many claims made by the manufacturers as to its utility, in

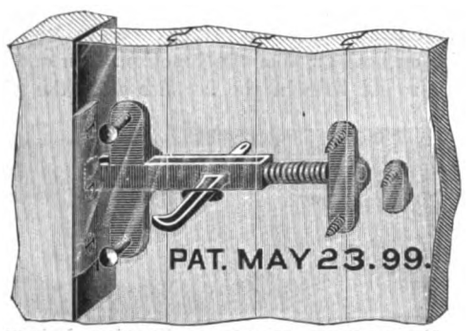

FIG. 1.—PERFECTION SPRING DOOR LATCH.

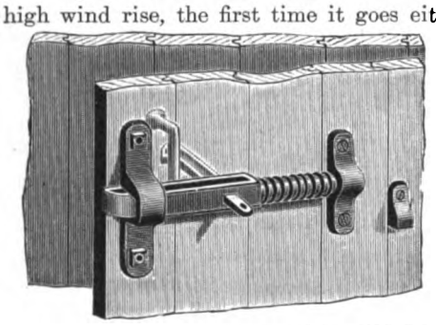
addition to the reference made above, they state that being on inside of door it is protected from the weather, and cannot be affected by snow or ice. It is self fastening. All that is necessary is to give the door a gentle push, when it catches at once, either shut or open. It is so constructed that the door may be opened from either side, thus saving time, avoiding the necessity of going around to the other side to open it. The hands do not have to be emptied to close or fasten the door or gate. It is so constructed that the door can raise or sag fully two inches, and yet the latch remain in perfect working order. Should the door be left partly open, and a high wind rise, the first time it goes either shut or open it



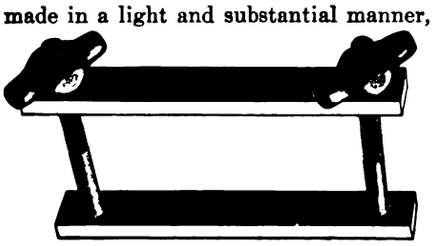


FIG. 2.—PERFECTION SPRING DOOR LATCH.

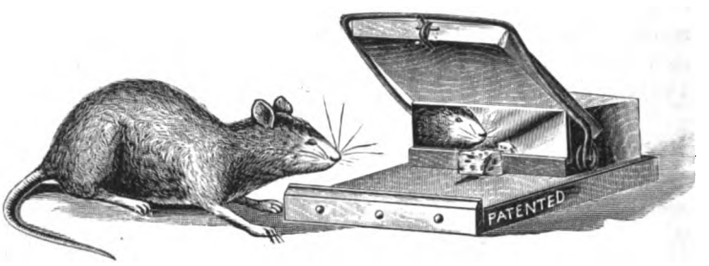
fastens, consequently saving it from risk of being broken or torn from the hinges. It is calculated to be a desirable article for the purpose designed.

Founders' Flask Clamps.

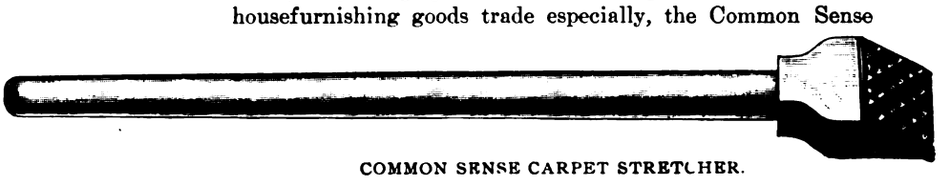


The R. Bliss Mfg. Co., Pawtucket, R. I., in connection with their various specialties manufactured in wood to be sold to Hardware dealers, also manufacture a few special appliances that are not usually found in the general trade. Among these are the Brass and Iron Founders' Flask Clamps, an illustration of which we give herewith. The pattern selected, as will be noticed, is a very desirable one, and while made in a light and substantial manner, will be found especially strong and durable in use. They are made in four sizes, running from 1 1-2 inch screw clamps, with an inside measurement of 15 x 18 inches; 1 1-4 inch, with an inside measurement of 13 x 16 inches; 1 1-8 inch, with an inside measurement of 12 x 15 inches, and 1 inch, with an inside measurement of 10 x 12 inches. The manufacturers state that other sizes will be made to order if so required.

FOUNDERS' FLASK CLAMP.

The Mirror Trap.

The Mirror Trap Co., of Detroit, Mich., and Windsor, Ont., are placing upon the market a novelty in the shape of a rat and mouse trap that presents selling features which ought to commend them to the Hardware dealer. There are so many rat and mouse traps on the market at the present time, that anything new in this line must present original

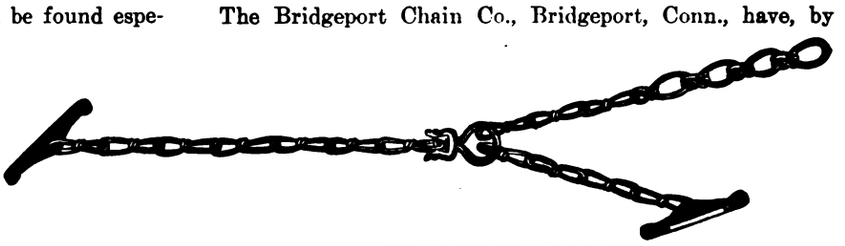


MIRROR MOUSE AND RAT TRAP.

and unique features to command attention. This trap, an illustration of which we give herewith, presents a number of special features to which the manufacturer calls attention. It is intended as a decoy trap, the mirror very successfully deceiving the vermin. When baited, the trigger is not exposed like other traps; even the springs and other working parts are concealed, and when set are not likely to arouse any suspicion on the part of the animal. They do not have to catch them in any particular place, wherever the snap strikes them they are caught. The traps never require to be covered when set. This trap will be found quite a novelty, which of itself assists in making the sale.

Common Sense Carpet Stretcher.

The Buffalo Specialty Mfg. Co., 375 Ellicott Street, Buffalo, N. Y., are placing upon the market through the Hardware and housefurnishing goods trade especially, the Common Sense



COMMON SENSE CARPET STRETCHER.

Carpet Stretcher, which we illustrate in this column. This is an entirely new device in its line, and is claimed to surpass anything ever presented to the trade for this particular purpose. It is made of solid hard wood, very nicely finished. The end plate is of steel, with short projecting teeth or points. These do not project through the carpet so as to injure it in the slightest degree, but it enables a powerful hold or grip to be obtained, so as to enable any person to thoroughly and quickly stretch a carpet in a very complete manner, and one that compares favorably with and works more satisfactorily than many of the ordinary carpet stretchers now on the market. It is intended to be marketed at 25 cents each, the manufacturers allowing a discount sufficient to pay the dealer a very good profit at this price.

"Brown" Cow Ties.

The Bridgeport Chain Co., Bridgeport, Conn., have, by introducing the "Brown" Cow Tie, which we illustrate herewith, in the Ohio pattern, certainly done more to render unnecessary the importation of German cow ties than any other chain manufacturers contemplating this end. The "Brown" Cow Ties have become extremely popular in all parts of the country, and a great demand has already been established for them. Already in the year 1900 the manu-

THE "BROWN" COW TIE.

Digitized by Google

facturers state that they have used one million feet of chain expressly for this branch of their business. The twist is claimed to be as strong as the welded chain, and infinitely better and more reliably made than is possible with welded connections, and is constructed with every possible care in order to avoid any possibility of chafing the animal. Every part is made from the best grade of steel, and by their improved patented weldless processes. They are made in the usual customary sizes, running from 0 to 4-0, and are made in the Ohio pattern with two toggles or with toggle and snap, also made in the open and closed ring patterns, with toggle or with snap. Dealers not familiar with this important specialty will find it advantageous to ask for samples of the same. The manufacturers gladly supply canvassers' samples on application. We should gladly have *Hardware* mentioned when applying for the same.

The Rollman Potato Cutter.

The illustrations which we present herewith have reference to a new machine manufactured by the Rollman Mfg. Co.,

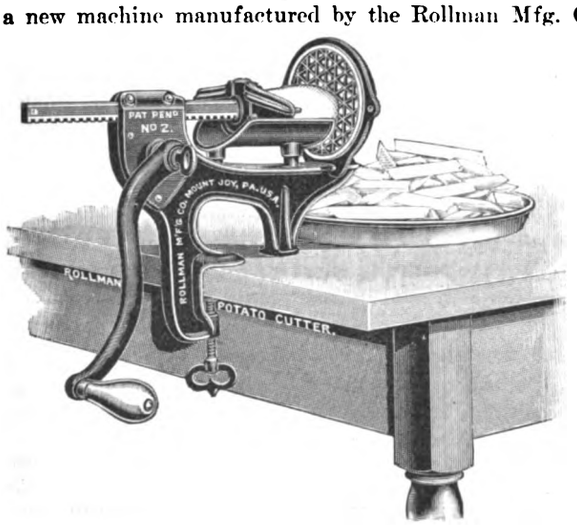


FIG. 1.—ROLLMAN'S POTATO CUTTER.

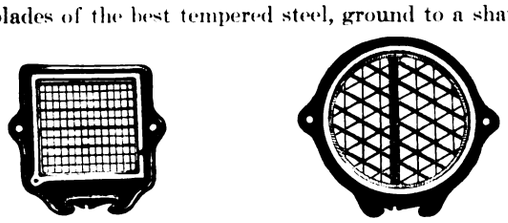
Mt. Joy, Pa. It is made in several sizes suitable for family, restaurant, or hotel use, weighing 7 to 9 pounds respectively. The larger size is also furnished with a flying wheel for hotel and restaurant use, being furnished with pulleys attached for power when desired. In use the gear and rack are operated by a crank to push the potato against and through the cutter. The rear of the potato rests against a rubber cushion in order to prevent injury to the knives. The cutters, illustrations of which are shown in Fig. 2, are interchangeable, and are attached to the machine by a wing nut. The two styles shown indicate the julienne and French fry cutter. One each of the cutters accompany each machine. The operation of the machine is very simple, being clearly illustrated in the engraving, Fig. 1. The cutters have blades of the best tempered steel, ground to a sharp and



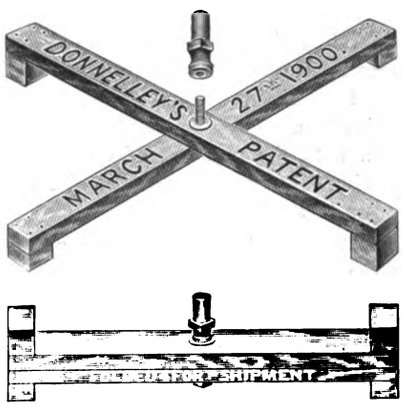


FIG. 2.—POTATO-CUTTING FORMS.

uniform edge, and are so interwoven and braced with each other that twisting is impossible. The company state that the new machines are strong and neatly made, being superior to their original 1898 styles. They also explain that no strength or skill is required to cut potatoes rapidly into uniform and various styles. They explain that the center of the cutters is supported by a heavy iron beveled bridge, capable of sustaining a pressure of five hundred pounds and more. The machines are finished in japan with gold ornamentation. All parts are interchangeable, so that when required new cutters or any other parts can be readily replaced.

Donnelly's Christmas Tree Holder.

John Donnelly, Branford, Conn., is manufacturing the Christmas Tree Holder which we illustrate herewith. It is designed for general use, and is simply constructed, and yet strong and durable for the purpose. The principal feature

FIGS 1 AND 2.—DONNELLY'S CHRISTMAS-TREE HOLDER.

of the holder is that it can almost instantly be applied, with the use only of a hammer. As will be noticed in Fig. 1, it is made of wood, the dimensions of the strips being 24x1 3-8x 3-4 inches. The iron socket, shown in the upper part of Fig. 1, is hollow, and sharpened with the bevel on the inside, being 11-16 inches in diameter. This is driven one inch into the butt of the tree, and fastened by a machine bolt 1-4 inch size, which holds the two arms of the frame together, and can be screwed into the socket by merely turning the arm. One of the principal points made by the manufacturer is that any tree can be screwed in this way with no danger of splitting. At the same time a perfectly upright position, sufficiently rigid for that purpose, can readily be given to the tree. The tree holder is finished in green, and presents a very neat appearance. They are made so as to ship economically by freight, as they can be collapsed or folded, as is shown in Fig. 2, making a very compact package for shipment, the desire of the manufacturer being that the trade generally will retail them at 25 cents, from which retail price a very liberal discount price is given to the trade, which will be given on application. The holders are thoroughly packed in strong cases, 100 in each case, and to those unfamiliar with the style and merit of this appliance, the manufacturer will send any Hardware jobber a free sample, and also an extra socket driven in a small portion of a tree, in order to show its proper construction. The manufacturer has been long known as making a fine quality of telegraph linemen's climbers, prices and samples of which will be furnished upon request.

Advertising is an art; that everybody knows; and never so much an art as in these days when as much careful work is done in writing advertisements as in writing editorials. But advertising is also a science. A high authority says: "Advertising should be planned on the presumption that it is going to be permanent." That is a scientific statement. It means that advertising should be systematic, and not sporadic; that it is a distinct feature and department, and should be so administered. Announcements now and then cannot bring a train of steady benefits. They may do for spurt sales, but when the sales run their course they are forgotten. —*Indianapolis News.*

REVIEW OF THE MARKETS.

Hardware: While the volume of trade may be said to be sufficiently encouraging so far in the Fall season, it is scarcely up to the highest anticipations of the sanguine workers. The indications point to a conservative business being done during the month, with the prospect of greater activity being manifested during October, but the promise of a busy time after election up to the holidays.

Builders' Hardware: There has been a recent revision of prices by the leading manufacturers of Builders' Hardware by which reductions are made on the Standard or Classified lines. Prices now in effect are by comparison on a parity with those prevailing July 26, 1899.

Wire Nails: The business in wire nails continues to improve in its steady demand, but with no change in the current quotations. More anxiety is exhibited by buyers in getting prompt deliveries.

Quotations may be named as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	$2.20
" less than carload lots	2.25
To retailers in carload lots	2.30
" less than carload lots	2.40

New York prices remain as heretofore:

To retailers, carload lots on dock	$2.48
" less than carload lots on dock	2.55
Small lots from store	$2.60 to 2.65

Cut Nails: There is but little indication of there being any large stock of this staple in the dealers' hands, an average demand being noticeable. Prices are still held as previously quoted, f. o. b. Pittsburgh, terms 60 days, 2 per cent. off in 10 days:

Carload lots	$1.95
To jobbers in less than carload lots	2.00
To retailers in less than carload lots	2.10

New York prices remain the same, the following quotations representing the market:

To jobbers in carload lots on dock	$2.13
" less than carload lots on dock	2.18
To retailers in less than carload lots on dock	2.31
Small lots from store	$2.30 to $2.35

Barb Wire: A fair business only for domestic trade is reported in this principal staple. Prices remain as previously quoted. Quotations for domestic trade remain as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.50
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.55
" " " Galvanized	2.85
To retailers in carload lots, Painted	2.60
" " Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
" " " Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

Plain Wire: The demand continues regular for Plain Wire, and a conservative business is noticeable, affected somewhat by the lessened requirements of the manufacturing interests. Current quotations remain, however, as previously established, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

	Base sizes. Plain.	Galv.
To jobbers in carload lots	$2.15	$2.55
" less than carload lots	2.20	2.60
To retailers in carload lots	2.25	2.65
" less than carload lots	2.35	2.75

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)

Nos.		Galvanized.
6 to 9	Base	$0.40 extra.
10	$0.05 advance over base	.40 "
11	.10 " " "	.40 "
12 and 12½	.15 " " "	.40 "
13	.25 " " "	.40 "
14	.35 " " "	.40 "
15	.45 " " "	.75 "
16	.55 " " "	.75 "
17	.75 " " "	1.00 "
18	.85 " " "	1.00 "

Shovels, Spades and Scoops: At the regular quarterly meeting of the manufacturers of Shovels, Spades, Scoops and Ditching Tools, which was held in New York September 13th, no changes were made, the prices prevailing since the previous quarterly meeting being reaffirmed.

Ice Skates: The manufacturers of Ice Skates recently have made an agreement to advance the price of Skates, to take effect October 15th, the net advance being approximately 7 1-2 to 10 per cent. This was made necessary by the increased cost of material and the fact that a higher scale of wages has increased costs to the extent indicated.

Braided Sash Cord: The sustained advances in the price of cotton have begun to affect quotations of its several products, cotton sash cord having been advanced 2 cents a pound over previous quotations.

Cordage: The Cordage market is by no means in a brisk condition; in fact, on Manila it is very quiet, and not encouraging. The following quotations represent the market at the present time:

	Pounds. Cents.
Manila, 7-16 inch and larger	10
" ⅜ inch	10½
" ¼ inch and 5-16 inch	11
Sisal, 7-16 inch and larger	6½
" ⅜ inch	7
" ¼ and 5-16 inch	7½
" Lath Yarn, Medium and Coarse	6½

Linseed Oil: Dean Linseed Oil Co., under date of Sept. 21, quote as follows:

In lots of less than 5 barrels.....64 cents per gallon.
In lots of 5 barrels or more.....63 cents per gallon.
The five barrel price only applies to deliveries of that quantity at one time
Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

THE BALTIMORE TRADE.

The delightful change to cool, bracing weather has awakened the trade from the lethargy into which they had fallen through the influence of the hottest Summer on record, and now many merchants are visiting the city and purchasing their Fall stock, which in most cases embraces a little of everything seasonable, while the volume of goods moving is represented in ammunition, guns, shovels, oyster knives, stove pipe, axes, wood saws and cutlery. Collections show a decided improvement, and give a feeling of confidence and tone to business. Political agitation is not a disturbing element at present, and there is a quiet feeling along the line that all will be well, and that there will not be a change in the administration for the next four yours. The reaffirming of prices for the balance of the year by the Shovel Association recently is very gratifying to those purchasing their goods outside of the Trust, and who have stock on hand. The gentlemen who have enjoyed the shovel cinch for nearly five and a half years ought to feel that they have had about enough of a good thing, and that it is a really bad thing to force the consumer to continue indefinitely the enormous prices he is compelled to pay for same. It is perhaps not generally known that the Fork Association have a committee who handle some jobbers that have been jobbers for a half century, and expect to be jobbers for another half century, in a manner that does not reflect the most credit upon their

Digitized by Google

wisdom or justice. It is to be hoped that they will soon rectify their faults as there is a day of reckoning for all industrial sinners. Baltimore citizens deeply feel the sad affliction visited upon Galveston, Houston and other parts of Texas, and have not only extended their heartfelt sympathies, but are vigorously working for and cheerfully contributing to a fund to be sent to their relief. We are anxious to contribute if only a little towards the alleviation of the suffering which we learn there exists, for it is our wish at all times to lend a helping hand to any locality in distress.

H. W. WEBB & SONS.

THE PITTSBURGH TRADE.

We were agreeably surprised to find from reports of the first two weeks of September sales a very handsome increase over the corresponding weeks of 1899. The extreme heat during this time held back orders for seasonable goods; hence we did not expect this result. We are now favored with a touch of real autumn weather, thermometer in the 40s, which will sell Fall goods rapidly. We regret to see that the shovel manufacturers and The American Steel & Wire Co. have reaffirmed existing prices. We regard these items as too high, and believe a reduction would have been more healthful for the trade. However, for the present we are in the hands of those who control the output, and must submit. These goods are being handled by jobbers without profit. Manufacturers generally throughout this section are fully employed, though at low prices, compared with last year. Bituminous coal operators are greatly pleased at the prospect of a large and growing export trade.

LOGAN-GREGG HARDWARE CO.

THE DAVENPORT TRADE.

The Iowa Hardware Jobbers' Association will hold their regular quarterly meeting at Des Moines on the 19th inst. Mr. Tredway, secretary, states that important matters will be presented for discussion, and urges a full attendance.

County fairs have interfered with business to some extent, but so far we have not heard of Hardware merchants closing their stores to attend a political rally; in fact, everybody seems to be too busy just now to take much interest in politics. Iowa is a sort of a jug handle State politically anyway.

Prices on staple goods are firm, and wire nails, barbed wire, plain wire, fence staples, etc., etc., are difficult to obtain; demand continues greater than the supply.

Crops harvested are good, and corn in this great corn belt is safely beyond the reach of frost; the yield will be large.

The hand-to-mouth policy of buying still prevails, and, of course, this policy is always an advantage to the local jobber. Small orders for assorting-up-purposes are usually placed with the nearby dealer.

The long-continued hot season is at last broken, and we now have favorable weather for business and golf.

SICKELS, PRESTON & NUTTING CO.

THE COLUMBUS TRADE.

The hot weather was broken by the remnant of the disastrous Texas storm, and the change is very acceptable, as it has been the hottest August that has ever been experienced. Unfortunately no rain preceded the change in the atmosphere, and it is too dry for seeding. Very little wheat has been sown, and it is useless to put wheat into the ground until rain comes. The corn crop is unusually good, and a large acreage is being harvested.

Trade is good and the demand for wire and nails is heavy, and mills are not able to make very prompt shipments. Axes are scarce, and it looks as though there will be a shortage. The demand for lanterns is not heavy, as most dealers bought very liberally last year, before the advance, and have a good many carried over. Skate orders are not numerous or large. The very sharp advance keeps buyers from placing orders early, and any skates carried over will be cleaned up close before merchants will buy any more than sizes that were entirely sold out last year. Builders' Hardware is in better demand than at this time last year. Prices on a number of

lines are down pretty close to 1898, and a few articles are lower than in 1898, when price of raw material is considered, bolts and tacks for example. Manila and sisal rope and fodder yarn have been on the down grade, while cotton and hemp goods are stronger. The outlook for a good Fall trade is good, and it is hoped politics will not interfere with business. One thing is encouraging, and that is the absence of street-corner-politicians that were such a nuisance four years ago, but there is a good reason for that, as people are too busy this year to listen to some would-be "know it all."

THE SMITH BROS. HARDWARE CO.

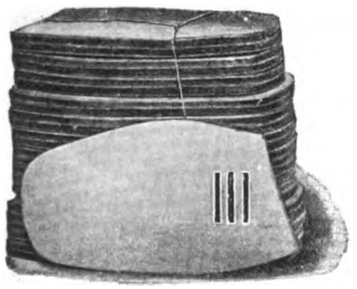
THE ST. PAUL TRADE.

This has been our busy month, so far. We have recently had in St. Paul the most successful State Fair ever held, the exhibits in cattle and fruit astonished every one, and all have come to the conclusion that Minnesota can raise better stock than any warmer climate, and that raising apples and plums is just in our line. St. Paul took care of the crowd in excellent shape, and, although we had thirty to thirty-five thousand strangers to find beds for at night, we were able to do so by a little crowding.

Our store was visited by hundreds of customers, and while sales may not have been in proportion to callers, still the sales made were very satisfactory, and personal interviews with our customers always pleasant.

Business in general continues good, but we are anxiously looking for a solid and steady market, and will feel relieved when all goods have found their proper level.

C. W. HACKETT HARDWARE CO.



THE MINNEAPOLIS TRADE.

The first week in the month was State Fair week, and thousands and thousands of people were in the Twin Cities, coming from Minnesota, North and South Dakota, Northern Iowa and Western Wisconsin. All trains for days were running full, bringing people to the Fair. Elegant weather prevailed, which was fully appreciated and taken advantage of by visitors as well as our citizens. The Fair proved a great success in every way. It was a good thing in giving people an opportunity to come to the cities for a little change and recreation, and without doubt was instructive. Certainly, the merchants, hotels, restaurants, railroads and street cars were the gainers. They were all doing a land office business.

Trade since about the 15th of August has been steadily improving. We had two months rather dull business. Prices somewhat demoralized on many staple articles, and we think without just cause, for we believe generally manufacturers' prices are pretty well established until the close of the year. The crop situation is about the same. There is an unmistakable shortage, and it is going to hurt seriously in many sections, but there will be an immense amount of money distributed in the States tributary to Minneapolis for this season's crop, enough to make good business.

THE NASHVILLE TRADE.

Trade conditions have not been as satisfactory so far as for the same period last year. Continuous rains throughout the months of June and July, in connection with the downward tendency on some lines, gave business a setback from which it has not fully recovered. Merchants are very chary about placing Fall orders, and are buying only for their immediate wants, naturally very much reducing the volume of business.

We are pleased to note, however, that with the strong upward tendency in the price of cotton and a better feeling among the country merchants, that the orders are more frequent and larger, and while we cannot hope to regain what we may have lost, yet we have good grounds on which to base our hopes that the future may hold for us more than the past, and for that reason we are not feeling so very bad after all. One very great thing which never fails to demoralize business is the Presidential election, and this year it is coming good and strong. When that is over we look for a return of peace and prosperity. H. G. LIPSCOMB & Co.

THE SAN FRANCISCO TRADE.

From the jobbers' view point steady orders for all sorts of things for Alaskan and Government account are preserving this market from even the semblance of dullness, hence local wholesalers report themselves very well satisfied with the state of trade. Likewise also is heard the voice of satisfaction all along the line of retailers; no word of dissent from the general remark that trade here has been unusually good throughout the Summer, and that the Fall bids fair to turn out equally brisk.

According to reports from railroad officials and coast steamship lines upward of one hundred and fifty-five thousand people availed themselves of the 50 per cent. off transportation rates opportunity and came here from all over the State to participate in California's four days' jubilee, ending on the morning of the 13th instant. For the outfitting of this demonstration in honor of the State's semi-centennial Admission Day anniversary all of the city's Hardware dealers were liberal contributors to the fifty-thousand-dollar contribution the festival management asked for and received. And it proved a most satisfactory investment, the merchants say, since our country friends, who came to the celebration, enlivened things wonderfully.

The principal casualty in connection with the celebration is thus referred to in a local paper: "L. H. Kohn, a Polk Street Hardware merchant, and prominent member of the San Francisco and Oakland Retail Hardware Association, one of the special aids to Grand Marshal Costello, was thrown from his horse at Washington Street and Van Ness Avenue. He was taken to the Receiving Hospital, where it was found that he sustained a laceration of the scalp." At this writing, one week after the serious mishap, Mr. Kohn is reported improving and out of danger.

The trade is now prominent in this city as subscribers to the Galveston relief fund, Vice-President A. A. Watkins, of the W. W. Montague Hardware Co., now being actively devoted as one of the Governor's appointees as a member of "California's State Relief Committee for Galveston's Sufferers."

Traffic officials of the Southern Pacific and Santa Fe lines, with the jobbers of Los Angeles on one side and the jobbers of San Francisco on the other, are not relishing their position. The president and secretary of the Associated Jobbers of Los Angeles, and C. C. Reynolds, of the Harper-Reynolds Hardware Co.; Mr. Scheller, of the Union Hardware & Metal Co., and prominent representatives of other trade lines, were recently here and have filed with the Railroad Commissioners a complaint against the two transportation companies, charging both roads with discriminating against the city of Los Angeles. The claim is made that San Francisco is given a better rate into the San Joaquin Valley than is Los Angeles, and the jobbers of the southern city ask for an adjustment of rates on a mileage basis.

S. J. Dean, a prominent uptown Hardware and mechanics' tools dealer, is now conducting a successful "fire sale," having been a few days ago next door to being burned out. This charter member of the local retail Hardware association is one of several who report trade the past month and a half very considerably better than during the same period last year.

Oscar F. Sites, president of the San Francisco and Oakland Retail Hardware Association, and secretary and manager of the Palace Hardware Co. of this city, was the subject of local newspaper notice the past week. The occasion was his silver wedding anniversary, at which celebration, on the 10th instant, there were represented four generations of the families of Mr. and Mrs. Sites, the eldest being the Hardware merchant's mother, who is in her 90th year, and the youngest, a two-month-old grandchild of the couple.

TRADE PRESS ASSOCIATION.

THE GRAPHITE INDUSTRY.

The tendency of business from a graphite standpoint is toward a prosperous Fall season.

In every department of its manufacture there is profitable activity, and as the months close there is the same array of figures to show increase of sales over the corresponding months of 1899. The percentage of "hurrys" in every mail indicate that there has not been much stocking up on the part of jobbers, a fact which the reports of our traveling force corroborate.

Of course our business is not a pulse or thermometer of general trade, because graphite is so needful in its various forms that it is about one of the last necessities the manufacturer or merchant will forego. Yet there are other indications which come our way, as collections are not backward and there is a great deal of inquiry for quotations of large lots.

Prices are firm and with no indication of a change. Our new factory is ready and the handsome new power house is in the last stage of completion, and steam will be up before the 1st of October. This will give us largely increased facilities, and we confidently expect that it will no more than meet our prospective requirements. JOSEPH DIXON CRUCIBLE CO.

Consul Schuman writes from Mainz, August 20, 1900:

A German export journal calls attention to the fact that iron bedsteads are being successfully introduced in North Syria. In 1899, about 3,750 iron bedsteads were imported at Berut from Birmingham, England. The selling price was about £2 10s. ($12.16) for each bedstead.

Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

Doing a Large Export Business.

We recently called at the works of the Nicholson File Co., Providence, R. I., and found them particularly busy with their export business, the shipments to foreign countries frequently exceeding in a day's business those for domestic consumption.

It is found necessary to reinforce and otherwise arrange the individual file boxes to insure their safe arrival under favorable conditions of transportation, the outer cases being braced and iron-strapped. Their methods in handling these foreign shipments, not only in the packing department, but throughout their factories, offices, selling departments, and all, are the result of accumulated experience acquired by the observation of their export travelers, and, apparently, the great care taken in these particulars is appreciated by those abroad.

At the time of the writer's call the shipping room was just despatching a 24-ton shipment to a concern in Russia. Almost every city in Europe is represented by orders, and Australasia and Africa, the Orient and the Spanish-American States show a generous sprinkling. Through their London office and warehouse 700 customers, at present on their books, are served. Twenty-four governments use these files. The last month's shipments exceeded in volume those of any previous month in the company's history.—*Machinery.*

Riceville, Ia.—George Hancock.

Scranton, Pa.—M. E. Flaherty, Burke building, Pittston ave.

Seguin, Tex.—The Seguin Hardware Co. has been incorporated. Capital stock, $20,000. Incorporated by Charles E. Tips, Fred Hellig, J. B. Cookenbos, Edgar L. Gerhard of Seguin, and John H. Bond, Jr., of San Antonio.

Wall Lake, Ia.—E. B. Curry.

Changes and Improvements.

Alloway, N. J.—Senator Richard C. Miller of Salem county has disposed of his Hardware and lumber business to Freeholder John F. Ayres.

Bellaire, Mich.—The Antrim Hardware Co. are erecting a large two-story warehouse for the accommodation of their growing business.

Boonville, Ind.—J. F. Rickrich has bought the L. Eckstein stock of Hardware and groceries, and will continue business at the same place.

Brookston, Ind.—The Hardware firm of Burget & McConnell has been dissolved, Mr. Burget buying his partner's interest.

Clinton, Ill.—W. W. Newman has sold his interest in the Hardware and implement business of Bailor & Newman to J. E. Bryant.

Elberton, Ga.—Bewley Hardware Co. have changed their base, and are now selling Hardware at Almond's old stand.

Emmetsburg, Ia.—Will Fenn has sold his stock of Hardware to R. Hanson, south of town.

Fayetteville, Ohio.—George T. Lake, the Hardware man, has moved to the south side of square, Boles building.

Hutchinson, Minn.—W. W. Sivright has purchased the Hardware stock of W. E. Sivright and will continue the business at the same stand in connection with his farm implement business.

Lafayette, Ill.—The Hardware firm of Fell & Hanks will now be known as Hanks & Pope, Mr. Pope of Clinton, Ia., having bought out the interest of Yed Fell.

Lampasas, Tex.—Fox & Mills are moving their stock of Hardware to the Harvey building, on west side of square.

Lexington, Ill.—The Hardware firm of George W. Hiser & Co. is now owned by George W. Hiser, Edward Campbell and Robert Gray.

Ludlow, Mo.—H. H. Igou has sold his Hardware store to Ed. Fink.

Marlette, Mich.—Arrangements have been made by which the Hardware business of the Thompson Hardware Co. has been transferred to G. P. Young and D. F. Hunter, of this place.

Marlin, Tex.—Rush Bros. & Gardner have moved into their new store with their Hardware and furniture stocks.

Mars Hill, Me.—H. A. DeLong has sold out his business to N. E. Parsons.

Milan, Mich.—K. P. Alderman has traded his Depot Hotel and restaurant for the Hardware stock of Palmer Bros.

Mt. Vernon, S. D.—F. Hatch has bought the Hardware building formerly owned by C. W. Hatch and occupied by Colby & Diehl.

Oakley, Mich.—F. W. Pierce, manager of the Owosso Hardware Co., has sold his Hardware business to William Eagan of Owosso, who has taken possession.

Oil City, Pa.—Eugene E. Seep and his brother, Arthur F. Seep, both of this city, have purchased the good will, stock and business of the J. M. Carson Hardware store, on Seneca street, in the Ivy Club block, and will hereafter carry on the business.

Pearl City, Ill.—The Kuhlemeyer Bros. have taken possession of the Knapp Hardware store.

Petersburg, Tenn.—The Hardware firm of Scott & Stallings has changed hands, R. L. Dyer purchasing the interest of Mr. Stallings.

Platteville, Wis.—A deal has been closed by which Edwin A. Biddick becomes possessor of the stock of James Allen.

Pomeroy, Ohio.—The Skinner Hardware Co. have begun the work of excavating for their new Second street building. It will be 25 feet wide, 80 feet long and three stories high, and will have a handsome iron front.

Rockford, Ill.—Haegg & Kuhlin, the Seventh street Hardware dealers, find their trade increased to such an extent that they have not room for the stock they wish to handle. They have determined to build a good sized structure on the rear of their store.

Business Embarrassments.

Akron, N. Y.—H. J. Bartlemus has closed his Hardware store.

Deerfield, Wis.—The Davis Hardware Co. of this place has been closed by Sheriff Kanouse of Madison, on attachments in favor of the American Steel and Iron Works and E. Bement & Sons. The assets are given as $2,000 and the liabilities as $1,000.

Elmira, N. Y.—Isaac R. Chapman, a Hardware dealer of South Main street, has petitioned to be adjudged a bankrupt. The petition sets forth liabilities to the amount of $8,110.97 and no assets.

Green Bay, Wis.—James J. St. Louis has filed a petition in bankruptcy, scheduling $1,285 of liabilities and no assets. He was a Hardware dealer.

Juniata, Neb.—M. E. Stoner, an implement dealer, has failed.

Mayfield, Ky.—Happy Brothers, Hardware merchants, have made an assignment. Their liabilities are given as $4,088.

Wellsville, O.—George L. Maple, the Hardware merchant of Main street, has made an assignment. The extent of the liabilities are not known. George Ridgley, A. C. Noble and Whalen Maple are taking an inventory of the stock. J. E. Paisley is the assignee.

Fires in Hardware Stores.

Cornwall, Ont.—Alex. Jarvo, Loss, $3,000.

Dassel, Minn.—J. M. Johnson.

Geyserville, Cal.—Haupt's Hardware store.

Onargo, Ill.—Paxton Hardware Co. Loss, $1,000.

Palestine, Ill.—Ritchie & Son.

Spring Green, Wis.—Sherwood Bros. Loss, $1,000.

Unionville, Mo.—Miller & Wentworth. Loss, $9,000.

Burglaries in Hardware Stores.

Cimarron, Kan.—Evans Bros., $200.

Denver, Col.—Shrock Hardware Co., revolvers, $100.

Friendship, N. Y.—Gould-Carter Hardware Co., revolvers.

Knoxville, Tenn.—C. M. McClung & Co., $500

Marine City, Mich.—Zimmerman Bros., $500.

Mulberry Grove, Mo.—Blankenship Bros.

Octavia, Neb.—Alexander & Rodman, $100.

Oneida, N. Y.—Chas. H. Conley, $25.

Rock Island, Ill.—J. T. Noitsker, $50.

Tracy, Minn.—D. H. Evans, guns.

Waverly, Wash.—C. A. Loy, revolvers.

Wewoka, Ark.—Seminole Hardware Co.

Worcester, N. Y.—Fitapence & Co., cutlery.

Buffalo, N. Y.

PATENT PENDING.

STORE LAMP.

THE

M. & M.

(TRADE MARK)

Arc Lamp

450 CANDLE POWER

Burns 12 to 15 Hours with One Filling.

PATENT PENDING.

STREET LAMP.

THIS is an air pressure lamp with overhead generator, which produces a light equal in brilliancy to any commercial arc. We do not claim more than our lamp will do, but leave it to those who see it to judge of its candle power and light-distributing qualities. We do not claim **100** candle power and give you **40**. Every lamp is guaranteed to do all we claim for it. It is made entirely of brass, of the heaviest gauge of any gasoline lamp made, and there is no reason why a lamp should not last for fifty years.

ABSOLUTELY PORTABLE.

Finished in Oxidized Copper. Presents a very handsome appearance.

It has been passed by Board of Underwriters without penalty. It is absolutely non-explosive. No smell; no smoke. You cannot only own your own gas plant, but electric plant as well, as our claims are not in excess of what we produce.

MARTIN & MOREHEAD, 53 W. Washington Street, CHICAGO.

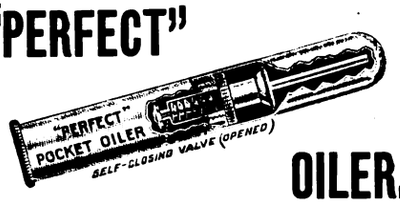
Take Your Choice.

You "get your money's worth."

PETERS SHELLS.

IDEAL. A high-grade, rich cherry-colored shell. High brass reinforcement. Battery Cup, Peters No 3 Primer loaded with **King's Smokeless.** Highest velocity. Even pattern.

NEW VICTOR. Medium Grade. A beautiful green shell, brass reinforcement. Loaded with **King's Smokeless** A perfect load for Trap or Field.



REFEREE. Any trap shooter or hunter now using black powder should try the Referee. Loaded with **King's Semi-Smokeless Powder.** It has all the advantages of Smokeless and costs but a trifle more than black powder loads.

LEAGUE. The King of all Black Powder Loads. They are loaded with specially selected material and are unexcelled.

THE PETERS CARTRIDGE CO.,
Cincinnati, Ohio.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Corry, Pa.—The Penn Radiator Co. has been chartered with capital stock of $100,000. Incorporators: Arthur T. Walter, W. K. Naylor and C. P. Rogers, of Corry; Thomas D. West of Sharpsville, and A. W. Williams of Sharon.

Detroit, Mich.—The Peninsular Tool Mfg. Co. has been incorporated with a capital stock of $25,000.

Detroit, Mich.—The Union Brass and Iron Works has been incorporated, to manufacture brass and iron goods. Capital, $10,000. Incorporators: L. Weinstein, B. W. Marvin, T. J. Sweeny, all of Detroit.

Fort Plain, N. Y.—Charles H. Burdick has fitted up work rooms over J. P. Grant's store, and is manufacturing sink cleaners, a five-cent article for housewives.

Glassport, Pa.—The structural work of the new American Ax and Tool plant has been almost completed, and roofing and siding are now in progress. The company expect to occupy the new works about December 15. Several hundred men will be employed at the start.

Oakland, Cal.—The Op-an-Clean Window Attachment Co. has been incorporated, with J. M. Thorp, Ross M. White, Lou C. White, H. L. Kemp, D. L. Lyon, Edward Stephenson and Ira A. Amar as shareholders. The capital stock is $20,000.

Oneida, N. Y.—A company has been organized within the past few days for the purpose of manufacturing steel pulleys. The capital stock is $75,000, and nearly all of it has been taken. The company has secured the old Oneida Carriage Works plant, and they are getting it into shape as rapidly as possible and hope to be able to commence operations in about 30 days. It is said that the company will employ about fifty men at the start, and increase the force from time to time as the plant is put into shape. At a meeting of the stockholders, which was recently held, the following were elected directors for one year: John Maxwell, C. Will Chappell, R. B. Downing, N. G. Stark, T. A. Devereaux, T. F. Hand, Jr., and Rhody Loher.

Penn Yan, N. Y.—L. D. West, of Dundee, and Mr. Minor, of Schuyler county, have leased a factory in Geneva, and will manufacture the West fuel saver.

Pittsburgh, Pa.—In November the American Steel & Wire Co. will begin work on three new furnaces on Neville Island. They will cost $200,000 each, and will make one of the most costly and complete blast furnace plants in the country. In December the company will begin the erection of the Bessemer converting plant, and next Spring the work of concentrating on the island the different wire and nail mills will begin.

Schenectady, N. Y.—The Hayes Grate & Mantel Co. has been organized in this city. It will erect a plant and manufacture iron grates and mantels.

Springfield, O.—The Fairbanks Tool Co. is the name of a new concern that is in full operation out at the East street shops.

Worcester, Mass.—The Nemo Heater Co. has been incorporated under the laws of Maine, with a capital stock of $1,000,000, for the manufacture of stoves and ranges, at Barber's Crossing.

Waterloo, Ia.—The Kelly, Taneyhill & Woodruff Co. has been incorporated, with a capital of $50,000. Henry Kelly, O. B. Taneyhill and F. E. Woodruff are interested in the new company, which is to manufacture well drills, tools of all kinds, machinery and supplies, and furnish raw materials from which they are made.

Wausau, Wis.—The Northwestern Flint & Sand Paper Co. have begun operations. Work on this mammoth institution, which covers a floor space of more than 37,000 square feet, was begun last May. The buildings erected are a two-story one, 40x200, another two-story addition 36x80, and a one-story building 30x80.

Changes and Improvements.

Anderson, Ind.—The Wilke Refrigerator Co. announce that the presidency and management of the works here will be taken on October 1 by J. S. Conwell, soon to retire from the Waverley Factory of the American Bicycle Co. at Indianapolis.

Batavia, N. Y.—The Wiard Plow Co. has started the foundation of a new building to be used for storage of iron.

Birmingham, Ala.—The Southern Nut & Bolt Works, which were closed down about two years ago, have been leased and will be started up as soon as possible.

Cleveland, O.—The Garland Foundry Co. has increased its capital stock from $50,000 to $100,000.

Dunkirk, N. Y.—The Dunkirk Radiator Works, having increased its capital stock from $100,000 to $200,000, will shortly enlarge its plant.

Elmira, N. Y.—The Clipper Chilled Plow Co. has gone into the hands of its creditors. This was made necessary on account of slow collections. The Chemung Canal Bank of that city has taken the keys and assumed possession. A meeting of the creditors of the company will be held and efforts will be made to resume operations.

Forestville, Conn.—The Taplin Mfg. Co., which has for a few years occupied a part of the Hubbell shop in the manufacture of light Hardware specialties, most of them being inventions of the secretary, C. A. Taplin, will discontinue business and the affairs of the company, which is a joint stock corporation, will be wound up. Mr. Goodrich, the president of the company, will continue the manufacture of some of the specialties in New Britain.

Hammond, Ind.—The former plant of the Lakeside Nail Co. at Hammond, Ind., has been leased to the Hammond Steel & Iron Co., a new corporation that expects to spend $50,000 in remodeling the plant for the manufacture of bar iron by a new process. The capital is $300,000. John B. Briggs of Cleveland is president of the corporation and A. F. Seeberger of Chicago is the treasurer. The land of the nail company contains twenty-six acres, and the plant cost $300,000. The new manufacturers expect to employ 300 men and to have a daily capacity of 100 to 150 tons of product.

Kansas City, Mo.—Application has been made in the circuit court for the appointment of a receiver for the Victoria Zinc Mining Co.

Knoxville, Tenn.—The American Handle Co. plant in this city is to be enlarged by the absorption of the Harrisburg Handle Works of Bristol. Both have been run under the same management, but it has been considered advantageous by the management to move the Bristol plant here and consolidate it with the larger plant. The removal will not take place until October.

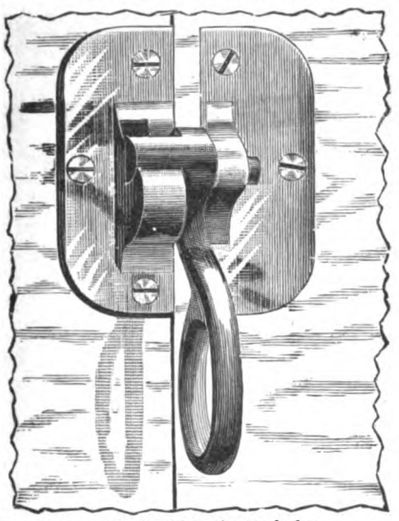
Le Roy, N. Y.—The plant of the Le Roy Plow Co. is being increased and new buildings added.

Recent Fires.

Iowa City, Ia.—The Crescent Mfg. Tool plant has been burned to the ground. The cause of the fire is unknown. The loss is total, being fully $75,000. The company had just installed a wire manufacturing plant, with a capacity of twenty-four tons daily, and it was intended to begin drawing wire the following week. The insurance is slight.

New Orleans, La.—A fire in the building of the Fairbanks Scale Co. in Canal near Camp street, swiftly destroyed the building and all its contents.

Miscellaneous.



New York, N. Y.—Safford A. Crummey has been elected secretary and treasurer of the Doebler Mfg. Co., which has a factory at Middletown, Conn., and offices at 258 Broadway, New York. Hardware specialties are manufactured. Mr. Crummey will have charge of the New York office.

Pittsburgh, Pa.—The Pittsburgh Stove & Range Co. held its annual business meeting at its offices, 909 Liberty avenue, recently. The election of directors resulted as follows: C. H. Bradley, J. D. Nicholson, J. F. McKee, L. W. DeHaven, A. M. Neeper, G. W. J. Bissel and John S. Graham. The board organized by electing Mr. Bradley president, Mr. Nicholson vice-president and Mr. Graham secretary and treasurer. Mr. Nicholson succeeds W. T. Bradberry as vice-president of the company, Mr. Bradberry having retired. Messrs. DeHaven and Neeper are new members of the board of directors. The affairs of the company were reported as in a prosperous condition.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Bay City, Mich.—William R. Newcomb, Astor House block, repairing.

Bay Shore, N. Y.—Hardy & Truax have formed a partnership in the bicycle business.

Boston, Mass.—The Boston Specialty Co. has been incorporated, with $150,000 capital, to do a general tire inflator business. Incorporators: G. W. Wilson, R. W. Jackson, E. R. Metcalf, all of New York, and A. Metcalf and J. Abbott.

Niles, O. — The Columbian-Morgan Handle Bar Co. has been incorporated, with $500. Directors, Chas. W. Morgan, E. C. Brainard, W. H. Foster, Myron L. Arms and C. H. Kilburn.

Portland, Ore.—A. A. Unruh, 236 Main street.

Provincetown, Mass.—Peter Rogers, repairing.

Trenton, N. J.—Grieb Brothers, the manufacturers of rubber goods near Southard street, on the canal, will start to build a big sporting goods factory shortly near their present building. The firm will manufacture all kinds of sporting goods, and have George Dyson, the present superintendent, to take charge of the factory when completed.

Waltham, Mass.—The Waltham Motor Carriage Co. has been incorporated, with $300,000 capital stock, $500 paid in; to manufacture and deal in automobiles, bicycles and electric goods. The officers are: President, W. A. Ingraham, of Lowell, Mass.; treasurer, Robert B. Johnson, of Waltham, Mass.

Weymouth, Mass.—J. F. Kilham, branch of Beverly, Mass.

Windsor, Ont.—A company for the manufacture of a new handle bar for bicycles has been organized here. E. W. Rider, Detroit, president; O. K. Thompson, treasurer; S. B. Best, Windsor, secretary and manager.

Yonkers, N. Y.—William Shirve of 29 North Broadway, has begun the manufacture of bicycles on his own patents.

Changes and Improvements.

Bloomington, Ill.—Chas. McKay succeeds Charles Flora.

Columbia, Ind.—W. A. Tulley succeeds J. C. Kester.

Fairmont, Ill.—Laughlins & Akers succeed B. F. Dougherty.

Fitchburg, Mass.—J. A. Joslin has removed to Freeman Block.

Hamburg, Pa.—It has been learned from good authority that the Wilhelm Bicycle Works, which was at one time one of Hamburg's greatest industries, and one of the best equipped bicycle works in the State, has been sold to New York parties. The new firm will manufacture automobiles. A part of the vehicles will be manufactured in Reading.

Harriman, Tenn.—T. C. Farnham is advertising his business for sale.

Hartford, Conn.—Rieckel & Lyman have discontinued.

Hartford, Conn.—The Billings motor carriage, which has been manufactured for the patentees by the Billings & Spencer Co., has been sold to the American Bicycle Co. All the patent rights, drawings, patterns and tools, together with the models in the Billings & Spencer Co.'s factory were transferred to the bicycle concern. The patents for the motor carriage were owned by Frederick C. Billings, Lewis Parker and Charles T. McCue.

Hinesburgh, Vt.—William Andrews has removed to Burlington.

Holyoke, Mass.—J. Wilson & Co. have dissolved.

Kellogg, Minn.—Geo. Butler succeeds Ed. McDonough.

Knoxville, Iowa.—F. R. Brackney succeeds Brackney Bros.

Lakeport, N. H.—H. A. Rublee, Union Avenue, has closed.

Leon, Iowa.—T. E. Horner succeeds Wallace & Horner.

Lewiston, Me.—The V. S. Darling Bicycle Co. has removed to 15 Court Street.

Macomb, Ill.—Albert Lindsey succeeds J. A. Smith.

Marion, Ind.—The Marion Cycle Works closed down for an indefinite period recently, throwing 250 men out of work. B. F. Burk, a part owner of the property, is quoted as saying that, the time having come when most all the large manufacturers of bicycles must transform their plants into other industries, the Marion Cycle Co. is already investigating for the purpose of making some other product.

Marion, Ohio.—Geo. Drollinger succeeds Geo. Blum, Main Street.

Medway, Mass.—Chas. Mervin, Clough's Block, has closed.

Millville, N. J.—William Breeden has closed.

Mont Ida, Kan.—T. Foster & Son have sold out.

Newark, N. J. — Receiver Frederick F. Guild is offering for sale the plant of the Stockton Mfg. Co., and invites correspondence on the subject. He lays emphasis upon the fact that the plant is well adapted for making the parts for automobiles and other machines of this kind.

Ottawa, Ill—The Ottawa Cycle Co. (not inc.) has sold out.

Poultney, N. Y.—J. Keech is erecting an addition to his repair shop.

Red Lake Falls, Minn.—Franz R. Freund succeeds R. J. Bullan.

Riegelsville, Pa.—Norman N. Bean has removed to the Bean Block.

Salem, Mass.—Achorn & Deacon, Essex Street, have closed.

Santa Rosa, Cal.—Draper Bros. have removed to Sebastopol.

Scio, N. Y.—S. N. Crandall succeeds J. J. Crandall.

Shelburne, Vt.—I. P. Mallette succeeds J. Lefevre.

Springfield, Mass.—Frank Hill, Worthington Street, has removed to Providence, R. I.

Stamford, Conn.—F. S. Ambler, Main Street, has closed.

Stillwater, N. Y.—A. J. Wood has sold out.

Stryker, Ohio.—Beucler & Nofzinger have sold out.

Syracuse, N. Y.—B. C. Algie has closed out his business.

Toledo, O.—N. M. Church has sold out his interest in the business of Eager & Church to his former partner, and will devote his entire time and attention to the business of representing the Snell Cycle Co. The bicycle business of Eager & Church will be merged into the other business of E. G. Eager & Co., and conducted by that firm from now on.

Westfield, Mass.—Carrying out plans which the American Bicycle Co. has in view will make Westfield one of the most important bicycle centers in the country. The Lozier plant at Toledo will be installed here at once. The American Bicycle Co.'s plant at Thompsonville, Conn., has already been consolidated with the company's local factory. The company will also make Westfield a distributing depot for several well known wheels in the East. A large clerical force will be centered at Westfield.

Yonkers, N. Y.—Louis A. Guinzberg has sold out.

Recent Embarrassments.

Buffalo, N. Y.—In the case of Beak & Craves, dealers in bicycles and bicycle sundries, F. F. Rick has been appointed trustee.

Columbus, O.—The Ohio Cycle Co. has been placed in the hands of a receiver. The action was taken at the instance of the American Cycle Co., who hold a note for $2,864, and who claim that the firm is insolvent.

Rivers, Ind.—James E. Ruggles has filed his schedules in bankruptcy with Referee Swigart. He has been engaged in the bicycle and Hardware business, and his schedule shows that he has no assets and $453 liabilities.

Recent Fires.

Port Huron, Mich.—Warren Buckner, loss $50; no insurance.

Winnipeg, Man.—J. McLean, Portage avenue.

Recent Burglaries.

Buffalo, N. Y.—Century Cycle Supply Co., 1710 Seneca street; $50 worth of goods taken.

Buffalo, N. Y.—James McCrea, 1598 Bailey avenue; store broken into and sundries and fittings stolen.

Columbian 1000-Shot Air Rifle.

Patented Oct. 24, 1893.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Enameled, $30.00; Full Nickel, $42.00.

ALL THE NEWS. HARDWARE HARDWARE EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."
It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.
Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.
For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.
It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.
It has just completed its **twentieth** volume and is consequently in no experimental stage, waiting to establish a subscription list.
HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.
. . . PUBLISHED BY . . .
THE HARDWARE PUBLISHING CO.,
275 Broadway, New York.
PRICE $1.00 PER YEAR FOR 24 ISSUES.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

Cronk's Patent Fencing Plier and Staple Puller. . .

THIS newly invented fencing tool is needed by all people that build or have occasion to remove or repair wire fence, as it is made with two staple pullers, two hammers and two button cutters They are the same weight as the 1½ Maydole Hammer and they are made of forged tool steel. No good farmer will be without one. They are warranted to cut No. 8 hard or No. 6 soft wire. Like the celebrated Cronk Plier they are fully warranted in all respects. No. 12, 11 in. long, $12.00. Dis.
